PREFACE

The Canada Year Book, the official annual compendium of information on the institutions and the economic and social development of the nation, may be said to have had its origin in the "Year-Book and Almanac of British North America for 1867", although this and succeeding volumes down to 1879 were published privately but with official blessing. Upon the passage of a general Statistics Act in 1886, an official reference volume was instituted under the title "Statistical Abstract and Record of Canada" and produced by the General Statistics Office of the Department of Agriculture. With the amalgamation of the General Statistics Office and the Census Office, the Year Book was remodelled in 1905 and issued under the title "The Canada Year Book, Second Series", embracing short notes on the events of the year, tables compiled from Census and Departmental reports and a historical listing of the Ministries and other Executive Officers of the Dominion since Confederation.

The half century since the new series of Year Books was launched has witnessed manifold developments in centralized statistical organization in Canada under the Dominion Bureau of Statistics, established in 1918. As the Bureau expanded its program of statistical compilation and analysis in keeping with the nation's remarkable economic growth, each annual edition of the Canada Year Book has endeavoured to present this challenging story through special articles, extensive statistical tables and analytical commentary designed to reveal the interrelationship of the various sectors of the economy and portray within a single volume the essential economic and social elements in the progress of Canada.

Apart from the regular annual revision of textual and statistical material, chapter by chapter, a number of special feature articles of current interest have been incorporated in the 1955 edition—the fiftieth anniversary number—of the Canada Year Book. These include: "The Northland—Canada's Challenge" (pp. 22-32); "Migratory Bird Legislation" (pp. 41-45); "Post-War Immigration" (pp. 164-166); "The Forest Products Laboratories of Canada" (pp. 455-461); "Developments in Canada's Mineral Industry—The Metals, Industrial Minerals, Petroleum and Natural Gas, and Coal" (pp. 473-497); "The St. Lawrence Power Project" (pp. 549-553); "Canada's Commercial Fisheries Resources" (pp. 578-590); "The History of the Canadian National Railways" (pp. 840-851); and "The St. Lawrence Seaway" (pp. 885-888).

The extended analysis of the 1951 Census of Canada, presented in the 1952-53 and the 1954 editions of the Canada Year Book, is concluded in the current edition with a survey of the nation's Merchandising and Service Establishments.

In addition to the above-mentioned special articles, other features have been introduced and revisions made in the various chapters. Among these are a detailed treatment of Canadian physiography, an up-to-date digest of the administrative functions of the Federal Government with accompanying chart, a new survey of Federal Government employment, a brief outline of Canada's international activities during 1953-54, preliminary results of the first nation-wide Sickness Survey, short analyses of the new Canadian Criminal Code and of the decennial revision of the Bank Act, sketches of educational and cultural activities of the National Gallery,

151056

the National Film Board and the Canadian Broadcasting Corporation, a survey of scientific and industrial research including that in the atomic field, as well as up-to-date reviews of developments in Canada's foreign and domestic trade, manufacturing, hydro-electric power, agriculture, forestry, mining, fisheries, labour legislation, health and welfare, prices, public finance, capital expenditure on construction, machinery and equipment, insurance, the national accounts, and various aspects of the defence of Canada. Numerous diagrams, charts and maps assist in interpreting the economic development of the nation which is presented in summary fashion in the Introduction to the volume (pp. viii ff.).

The concluding chapter, entitled "Sources of Official Information and Miscellaneous Data", presents extensive reference material embracing Government information services, federal legislation, official appointments, a chronology of current events, a list of special articles published in former editions of the Year Book, and a statistical summary of the progress of Canada over a period of eighty-three years. A large folding map of Canada is enclosed in the pocket on the inside back cover of the volume.

The present volume has been produced in the Canada Year Book Section by John F. McVea, Assistant Editor of the Year Book and Chief of the Section, with the assistance of Miss M. Pink, Miss C. Freeth and the Year Book staff, under the general editorship and direction of Dr. C. C. Lingard, Director of the Information Services Division. Charts and graphs have been prepared under the direction of J. W. Delisle, Senior Draughtsman of the Bureau.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is hereby gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or the branches of the public service concerned.

With a view to the improvement of future editions, the Director welcomes not only information bearing on any errors or omissions that may have escaped notice but also suggestions respecting methods of treatment.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada, as a rule, the Imperial system of weights and measures is followed. An exception, however, is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant. Billion, where used, represents 1,000 million.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:—

	Pounds per Bushel
Grains—	
Wheat	60
Oats	34
Barley	48
Rye	56
Buckwheat	48
Flaxseed	56
Corn	56
Mixed grains	50
All others	60

Wheat Flour—
1 barrel equals 196 pounds and approximately 4·5 bushels of wheat are used in the production of a barrel of flour.

	Pounds
Fruits (standard conversions)—	
Apples, per barrel	135
Apples, per box	43
Pears, per bushel	50
Plums " "	50
Cherries " "	50
Peaches " "	50
Grapes " "	50
Pears, per box	42
Strawberries, per quart	1·25
Raspberries " "	1·25
Loganberries " "	1·25

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. It must be borne in mind that where the list below refers to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise, United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures, 1 Imperial fluid ounce equalling 0·96 United States fluid ounce. Similarly, 1 Imperial gallon equals 1·2 United States gallon.

1 Imperial pint=20 fluid ounces.
1 United States pint=16 fluid ounces.
1 Imperial quart=40 fluid ounces.
1 United States quart=32 fluid ounces.
1 Imperial gallon=160 fluid ounces.
1 United States gallon=128 fluid ounces.
1 Imperial proof gallon=1·36 United States proof gallon.
1 Short ton=2,000 pounds.
1 Long ton=2,240 pounds.
1 Barrel crude petroleum = 35 Imperial gallons.

FISCAL YEARS OF FEDERAL AND PROVINCIAL GOVERNMENTS

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31.

Throughout the Year Book, fiscal-year figures are indicated in the text and headings of tables; otherwise, figures are for calendar years.

INTRODUCTION

THE CANADIAN ECONOMY IN 1954[*]

The Canadian economy was subject to a variety of adjustments in 1954, certain adverse events being largely counterbalanced by continuing expansionary influences and long-term elements of growth. The adverse factors consisted of a very poor wheat harvest, a moderately reduced defence expenditure, lower investment outlays for new machinery and equipment, a cessation of inventory expansion, a lower volume of exports (chiefly of wheat) and a lower level of consumer purchases of durable goods. These were counterbalanced to a large extent by continued gains in labour income and other forms of personal income, which in turn led to expansion of personal expenditures on consumer goods and services. There occurred also a renewed upsurge in new residential construction. Imports were lower, implying that some of the reduction in demand was counterbalanced by lower imports, rather than by reduced domestic output. On balance, the nation's output of goods and services in 1954 was 2 p.c. below that of 1953, and amounted to $24 billion. If allowances are made for the crop failure, the Gross National Product (excluding accrued net income of farm operators) was $22·9 billion as compared with $22·8 billion in 1953. Prices were generally steady throughout the year.

While activity in general was at a reduced level during the winter and early spring months, there occurred at mid-year a gradual renewal of expansion, culminating in a particularly rapid fourth-quarter increase. The aggregate level of business activity, as measured by Gross National Product (other than accrued net income of farm operators), in the fourth quarter of 1954, once again exceeded the previous peak in the third quarter of 1953.

These events were paralleled by somewhat similar developments in the United States, but certain differences should be noted. The agricultural sector is of considerably greater relative importance in Canada's economy and thus the poor 1954 crop had a large weight in the decline observed in Canada. The United States decline began one quarter sooner and lasted one quarter longer than the Canadian and may have been somewhat more severe.[†] The following paragraphs review briefly the major influences underlying economic developments in 1954. One of the most significant of these was the sharp liquidation of business inventories which began in 1954, following the substantial build-up of the previous year. The change from positive to negative inventory accumulation amounted to $0·6 billion. This reversal was related to developments during the period when inventories were being accumulated to meet growing defence requirements and the expansion in economic activity generally. As many of these expansive forces levelled off and supplies became easier, inventory holdings in certain lines became excessive and substantial liquidations followed. Thus, production of some manufactured goods was cut back in 1954 and current requirements were met out of inventory stocks.

---

[*] Prepared in the Research and Development Division, Dominion Bureau of Statistics.

[†] It is difficult to compare the extent of the decline in the two countries, not only because of differences in timing but also because of conceptual differences in the measures of total output. An approximate comparison is afforded by the two estimates of Gross National Expenditure (exclusive of accrued net income of farm operators, and in the Canadian data, exclusive of residual error). According to this definition, the decline in the United States from the second quarter of 1953 to the third quarter of 1954, amounted to 4 p.c., and the Canadian data from the third quarter of 1953 to the second quarter of 1954 showed a reduction of 3 p.c.

Business investment in plant, machinery and equipment declined to $3·4 billion in 1954 from $3·8 billion in 1953, though earlier estimates of capital investment intentions had suggested a moderate increase over 1953. Unfavourable weather conditions and other developments in 1954 resulted in lower than expected non-residential construction and machinery and equipment expenditures. Additional contributing factors were the completion of a number of remote area projects and other industrial expansion programs, and lower outlays for farm machinery and equipment, the latter being related to developments in the farm sector.

Defence expenditures on the National Accounts basis declined from $1·9 billion in 1953 to $1·7 billion in 1954, reductions being concentrated in construction and in procurement of certain equipment items. This had an adverse effect in related industries. Canadian defence outlays had reached their peak in 1953 and in 1954, by contrast with immediately preceding years, were not an expansionary force.

The lower level of consumer durable goods purchases in 1954 was a furthe factor in the decline of business activity. The removal of consumer credit restraints in 1952 was accompanied by a wave of buying but, by the end of 1953, the accumulated back-log appeared to have been worked off and demand had diminished to more normal proportions. Throughout 1954, consumer purchases of durable goods remained at this lower level, namely, $1·7 billion; most types were affected by the decline, the major exception being television sets.

Despite all these adverse developments, production, other than agricultural, remained level with the previous year, reflecting the effects of a number of important counterbalancing influences. Of major significance was the continued rise in personal expenditure on non-durable consumer goods and services which rose from $13·3 billion in 1953 to $13·9 billion in 1954. This increase was sufficient to raise the total of consumer expenditures above the 1953 level by about 3 p.c., and to offset an important part of the decline for consumer durables.

A further expansionary influence in 1954 was the fact that housing construction reached an all-time record of $1·2 billion. Related to this continued growth municipal government expenditures were higher than in 1953 to meet the greater demands for local improvements and services such as roads, streets, sewage and water facilities, schools and hospitals.

These sources of strength in the economy in 1954 were related to three factors: (1) continued growth in population generated new demands for consumer goods and services, and for housing; (2) further impetus to new housing was given through a change in the National Housing Act in early 1954 reducing down-payment requirements and extending the re-payment period, and through a change in the Bank Act permitting the chartered banks to make loans on home mortgages; and (3) personal income was at a high level throughout 1954—an important factor in the continued expansion of consumer demand. It may be noted that, in 1952 and 1953, personal income rose by 15 p.c., while retail prices were relatively unchanged. The resulting gain in 'real' wages supported a large volume of increased buying in these years, as well as a high level of personal saving. In 1954, despite the poor wheat crop and a slightly lower level of employment, personal income remained relatively stable—a development associated with higher average hourly earnings and an increase in transfer payments from government. In addition, although the level of profits was below that of the previous year, dividend payments to investors were maintained. Net personal rental income increased as the housing stock grew and as rents increased. Interest payments to persons also continued to rise.

An additional factor in the 1954 situation was the decline in imports of goods and services from \$5·9 billion in 1953 to \$5·6 billion in 1954. At a time when Canadian demand for certain types of goods and services was weakening, the effect on Canadian output was somewhat mitigated, at least to the extent that such declines were matched by a cut-back in imports of foreign-produced goods and services.

The over-all effect of these counterbalancing tendencies was to leave total Canadian output, apart from the farm sector, at approximately the same level as in 1953. On the other hand, the over-all level of non-agricultural employment was about 1 p.c. lower. Manufacturing employment declined by 5 p.c., consisting of an 8-p.c. reduction in the durable goods industries and a 3-p.c. in the non-durable goods industries. The average number of hours of work per week in manufacturing was 2 p.c. lower. These declines were only partly offset by the continued growth of employment in the service industries. On balance, with a slightly lower employment level, and an increase in both the population and the labour force between 1953 and 1954, there was some increase in unemployment. The number of persons without jobs and seeking work constituted 4·3 p.c. of the labour force, when averaged over 12 months, compared with 2·6 p.c. in the preceding year.

Prices were comparatively stable in 1954, with the exception of those for certain farm products. The sharp rise in world prices in 1950 and 1951 which accompanied the outbreak of hostilities in Korea was followed by a decline ending in 1952. Since that time, the general level of prices in Canada has shown little change. The consumer price index in 1954 was approximately unchanged from 1953 and 1952, but the index of wholesale prices was 1·5 p.c. below 1953 and 4 p.c. below 1952. Increased world output of both raw materials and manufactured goods and the renewed competitive vigour of international trade were major factors in the stability of prices. Export prices were slightly lower in 1954 than in the preceding year and import prices were slightly higher so that there was a small deterioration in the terms of trade.

INDUSTRIAL PRODUCTION

An analysis of Canadian production by industry in 1954 shows that substantial shifts occurred in the composition of output in 1954 as compared with 1953. In the first nine months of 1954, total manufacturing production was 5 p.c. below the 1953 level. Declines were widespread in the durable goods field, where a drop of 9 p.c. occurred. This development reflected inventory liquidations, the reduction in defence spending, falling purchases of consumer durable items, and reduced investment in new farm and other machinery and equipment. Production of primary iron and steel products and motor vehicles each declined by 23 p.c. Activity in the electrical apparatus and supplies industry showed a more moderate decline, reduced output in some fields being offset by a sharp increase in the production of television sets.

In the non-durable goods sector, a reduction in output of 1 p.c. occurred, associated mainly with a drop in output of clothing and textiles; at the same time, there were substantial liquidations of inventories of clothing and textile products.

Partly offsetting this decline were the higher outputs recorded by foods and beverages, chemical products, tobacco products, paper products and petroleum products industries. Many of these gains were associated with higher consumer purchases, though others were related to the growth in resource development.

In the primary industries, the substantial decline in agricultural output was wholly attributable to the great drop in grain output, as production of live stock, poultry, eggs and dairy products recorded advances over 1953.

Operations in the woods showed a moderate increase; declines in logging operations occasioned by reduced activity in sawmills and shingle mills were more than offset by an increase of 19 p.c. in pulpwood production. In the second half of 1954, vigorous housing programs in Canada and the United States, together with a rising level of industrial production in the United Kingdom, stimulated demand for Canadian wood products. A moderate gain was also recorded in primary fisheries operations, the result largely of increased cod landings off the Atlantic Coast and the plentiful run of sockeye salmon in British Columbia.

One of the most significant advances in output occurred in mineral production which rose by more than 10 p.c. in the first nine months of 1954. Output of metals increased by 4 p.c.; copper, nickel and lead showed substantial advances and zinc and gold production, although lower than in 1953, showed improvement by mid-year. The increases in metals production were related to stronger export demand reflecting, in turn, a high level of economic activity in the United Kingdom, work stoppages of Chilean and United States copper producers, and a resumption of United States Government stockpiling of zinc and lead. Output of crude petroleum and natural gas continued to show marked gains, as resource development in Alberta continued strong, but coal output, on the other hand, continued to decline. Coal production reached the lowest level in seven years, as other sources of energy were increasingly substituted for it.

In the public utilities sector, production of electric power continued to advance, gaining about 3 p.c. over 1953. Distribution of natural gas increased sharply, but production and sales of manufactured gas rose very little.

On balance, the output of primary goods industries, other than agriculture, was appreciably higher than in 1953.

The general level of construction activity in 1954 was about the same as in 1953. Housing construction showed an appreciable gain but declines in other sectors of construction were offsetting factors. Unfavourable weather conditions and the fact that work was completed on several important resource development projects affected the level of industrial construction in 1954.

While the combined output of goods in 1954 was slightly lower than in the preceding year, services continued to expand. All groups showed increases with the exception of transportation, communication and storage. This latter group declined as a result of reduced shipments of grain and lower shipments of automobiles, machinery, and primary iron and steel products. These declines were partly offset by long-run growth factors in a number of component sub-groups: activity in air and truck transportation and oil pipelines increased; the communications groups also increased as a result of the continued growth in telephone and telegraph services and the rapid expansion in television transmission stations.

Retail and wholesale trade activity rose fractionally in 1954, as a lower volume of sales by motor-vehicle dealers, clothing and shoe stores and some other trades was more than offset by rising sales of food stores, department and variety stores, garages and filling stations and other businesses. Government, health, educational, recreational and business services recorded advances over the 1953 level.

National Income and Gross National Product

Wages, salaries and supplementary labour income amounted to \$11·9 billion in 1954, an increase of 2 p.c. over 1953. Gains occurred in most of the primary industries (except agriculture) and in all of the service groups including public utilities, trade, finance, and other services; the increase in the service components was much higher than that for other industries. On the other hand, wages and salaries in transportation, storage and communication, and in manufacturing declined in the year-to-year comparison. Payroll declines in manufacturing, ranging from 6 p.c. to 10 p.c., were concentrated in iron and steel products, transportation equipment, and clothing, textile and leather products industries. Despite these particular declines, the trend of *total* wages and salaries throughout the year was steadily upward. By the fourth quarter, they were 2 p.c. above the 1954 average, paralleling the increase for the year as a whole.

The total of investment income, which includes corporation profits, interest, net rents and government investment income, amounted to \$3·7 billion in 1954, a decline of approximately 2 p.c. from 1953. Corporation profits, the major component of investment income, is estimated to have declined by about 6 p.c. for the year. Interest and net rental receipts of persons rose by about 12 p.c. in 1954, reflecting increases in average rents, the growth in the number of housing units, and higher deposit interest paid by banks. Government investment income showed little change from 1953, but higher interest receipts were an approximate offset to a decline in profits of government enterprises. Throughout 1954, investment income (seasonally adjusted) was relatively stable, following declines in the last half of 1953. Corporation profits, which had been declining throughout most of 1953, levelled off early in 1954 and showed little change throughout the remainder of the year.

Accrued net income of farm operators from farm production was \$1·1 billion in 1954, a decline of about one-third from \$1·6 billion in 1953. This decline was approximately accounted for by the drop of \$0·5 billion in the value of crop production, which reflected adverse weather conditions in the Western Provinces and severe rust damage to the grain crop. The year 1953, however, produced the second largest grain crop in Canadian history, so that the decline in 1954 represents a drop from a very high base. Moreover, cash income from the sale of farm products declined much less sharply in 1954, partly reflecting the fact that grain deliveries did not drop as sharply as crop production. The decrease in cash income in 1954 amounted to 12 p.c. In contrast to the decline in grain output, the production of live stock increased in 1954, and with prices only slightly lower, there was some increase in income from this source. Cash income from fruits, vegetables and dairy products was unchanged from the previous year.

Net income of non-farm unincorporated business in 1954, at $1·6 billion, was about 3 p.c. below the preceding year. The decline was concentrated in manufacturing and retail trade; gains occurred in other groups, with the major gains showing up in net income from professional service and the construction industry, the latter being related to the higher level of house building in 1954.

Indirect taxes, less subsidies, amounted to $2·9 billion in 1954, relatively unchanged from the 1953 level. However, there were a number of significant shifts among the components. At the federal level, indirect taxes declined by 5 p.c., mainly accounted for by lower excise tax collections and by a drop in customs import duties; the declines in these components were 5 p.c. and 7 p.c., respectively, and were associated with lower levels of factory shipments of goods, particularly durables, as well as with a drop in imports. Changes in tax rates introduced in the 1954 Budget were also a contributing factor in the decline. Accompanying the drop in federal indirect taxes, subsidies were also somewhat lower in 1954 than in the preceding year. At the provincial level, indirect taxes showed an increase of 6 p.c., accounted for by gains in gasoline and retail sales taxes. A gain of 6 p.c. in municipal taxes reflected higher receipts from real and personal property taxes.

Depreciation allowances and similar business costs increased by 5 p.c. in 1954 to reach a total of $2·5 billion. Almost all of the increase was the result of higher corporation depreciation, mining development write-offs, and depreciation charges for residential and non-residential real estate.

Components of Final Demand

As previously noted, consumer expenditure and investment in new residential construction were the two important sustaining forces on the expenditure side in 1954. During the period of the down-turn in production, from mid-1953 to mid-1954, the declines in the seasonally adjusted expenditure components were particularly sharp, but from mid-1954 to the end of the year all of the expenditure items were rising, with the exception of outlays for new machinery and equipment. These developments are discussed in greater detail below.

The major expansionary force in the economy in 1954 was personal expenditure on consumer goods and services which rose by 3 p.c., from $15·1 billion in 1953 to $15·6 billion in 1954. This increase was associated with a continuing high level of personal disposable income and a drop in the proportion of income saved. Expenditures for services and non-durable goods were higher in 1954, by 6 p.c. and 3 p.c. respectively, but expenditures for durable goods declined by 6 p.c. With prices slightly higher than in the preceding year, the volume increase in total personal expenditure amounted to about 2 p.c.

The major gain in non-durable goods purchases in 1954 was in the food component which rose by 5 p.c. Purchases of clothing declined by 5 p.c., while expenditure on tobacco and alcoholic beverages remained unchanged. In volume terms, non-durable goods purchases as a whole showed approximately the same increase as is indicated by the value figures.

In the durable goods group, the declines, though widespread, were especially marked in purchases of new automobiles which fell by 12 p.c. Purchases of most types of household appliances and furniture also declined, and domestic shipments of washing machines and refrigerators were down by 9 p.c. and 12 p.c., respectively, from the previous year; imports of refrigerators showed a drop of 42 p.c. The declines in these and other durable goods purchases were partially offset by higher sales of television sets, domestic shipments of which increased by 45 p.c. over 1953. With prices for durable goods as a whole slightly below the previous year, it is estimated that the volume of purchases declined by about 5 p.c.

Most of the service groups showed increases in 1954, with major gains occurring in expenditures for household operations and utilities, and for shelter. Outlays for user-operated transportation, medical care, education and personal care were also higher in 1954.

Expenditure for goods and services by all levels of government (federal, provincial and municipal) remained practically unchanged in 1954, at approximately \$4·4 billion. At the federal level, a decline of more than \$100 million, or 5 p.c., was offset by gains of 5 p.c. and 7 p.c., respectively, in provincial and municipal government expenditures. It may be noted that federal defence expenditure for 1954 amounted to \$1·7 billion compared with \$1·9 billion in 1953, a drop of 9 p.c. (on the National Accounts basis); this decline was only partly offset by increases in federal non-defence outlays. An increase in provincial government expenditure on goods and services reflected larger public investment outlays, while the increase in municipal government expenditures appears to be associated with the high volume of new housing construction in 1954 which increased the demand for roads, schools, and water and sewage facilities.

The steady growth in outlays for capital goods which has been a prominent feature of the post-war period was interrupted in 1954. Gross domestic investment (excluding inventory investment) declined from \$4·8 billion in 1953 to \$4·5 billion, a drop of 6 p.c. This decline was more than accounted for by sharply reduced outlays for machinery and equipment (off by 17 p.c.) and by somewhat smaller expenditures for new non-residential construction (off by 3 p.c.). On the other hand, outlays for new housing continued to increase, with a gain of 9 p.c. over 1953.

The decline in business outlays for plant, machinery and equipment was fairly widespread. Heaviest individual declines occurred in manufacturing, agriculture, fishing and utilities. Smaller declines occurred in mining, quarrying and oil wells, and in the construction industry. Partially offsetting these reductions, increases were recorded for trade, finance and commercial services, with smaller gains occurring in forestry and non-government institutions.

During 1954, inventory changes were a dominating influence in the movement of total production. The volatility of this component, and the rapidity with which changes can occur in the inventory field, make it especially significant in the quarter-to-quarter movements in Gross National Product. Moreover, inventory developments were of major importance in the changes that took place in the annual levels of production in certain industries between 1953 and 1954. From one year to the next, the inventory sector shifted from a position of substantial net accumulation (amounting to \$605 million), to a position of net liquidation (\$230 million). This represented a turn-around of approximately \$800 million, or 3 p.c. of Gross National Product, of which more than one-half, or nearly \$0·5 billion, was attributable to movements in business inventories; the remainder was accounted for by depletions in grain and farm-held inventories in 1954 compared with some accumulation in the previous year. The business inventory changeover occurred almost entirely within the manufacturing sector; the changes were most pronounced in the metal-using industries (iron and steel products and transportation equipment) and in the textile and clothing industries. These were the industries that showed the largest production declines in 1954, and in which imports were cut back most sharply.

By the fourth quarter, however, liquidations no longer appeared to be in evidence and a small accumulation was taking place. This reversal in the inventory sector amounted to $0·4 billion and, together with generally rising outlays in other components of Gross National Expenditure, brought the level of total output to a rate of $24·4 billion in the final quarter of the year.

Exports of goods and services declined from $5·4 billion in 1953 to $5·1 billion in 1954, or by 5 p.c., owing largely to a drop of nearly $0·3 billion in exports of grains and flour. Non-grain exports were well maintained in 1954, with declines in motor vehicles, primary iron and steel products, and a few defence exports being offset by increases in newsprint, pulp, planks and boards, most base metals, fishery products and chemical products. Receipts from services also showed declines with the largest drop occurring in freight and shipping services.

Imports of goods and services also declined in 1954, from $5·9 billion in 1953 to $5·6 billion, or by 5 p.c. Almost three-quarters of this decline was concentrated in imports of iron and its products. Large reductions also occurred in imports of non-metallic minerals and in imports of fibres and textiles. Particular items affected were agricultural implements, and machinery and equipment items. Large increases in imports were few in 1954 and were limited mainly to food products. Among the invisible or service items, increases in tourist expenditures and in interest and dividend payments abroad largely offset the drop in payments for freight and shipping services.

For the year 1954 as a whole, the deficit on current account was slightly smaller than in 1953, amounting to about $0·4 billion. The Canadian dollar in terms of U.S. dollars continued strong, being quoted at a premium of several cents throughout the year. However, this margin was beginning to close at the end of 1954, and particularly in the first two months of 1955.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:—

. . figures not available.

... figures not appropriate or not applicable.

— nil or zero.

- - amount too small to be expressed or where "a trace" is meant.

^{p} preliminary figures.

^{r} revised figures.

N.B.:— Instead of establishing a holding company as envisaged at page 363, paragraphs 2 and 3, provision was made in the Statutes of Canada 1953-54, c. 47 for both companies to report to the Minister mentioned in the text.

PART I.—GEOGRAPHY*

Canada comprises the greater part of the northern half of North America lying between the United States, Alaska and Greenland. In longitude Canada extends from Cape Spear, Newfoundland, at 52°37′W, to Mount St. Elias, Yukon Territory, at 141°W, a distance of 88°23′. In latitude it stretches from Middle Island, Lake Erie, at 41°41′N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83°07′N. Thus, Canada is essentially a western and a northern country, a fact of increasing strategic significance. Moreover, its limits have drawn out the climatic, vegetation and soil belts into broad east-west zones, thereby supporting the east-west orientation of the main frontier of the country and aiding Canada's historic east-west development.

The shape of Canada is like a distorted parallelogram, with its four corners making important salients. In the north, the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south, the salient of peninsular Ontario thrusts far into the heart of the United States. In the east, the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with the United Kingdom and France. In the west, the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North

Pacific Ocean between continental North America and the Far East. Canada thus stands at the crossroads of contacts with the principal powers and some of the most populous areas of the world.

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,845,774 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,598,701 sq. miles;* the United States of America (including Alaska), 3,608,653 sq. miles;* and Brazil, 3,288,050 sq. miles.* It is more than forty times the size of the United Kingdom and eighteen times the size of France. This immense size, however, while multiplying certain resources and seeming to afford much scope for settlement, has imposed its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an Arctic climate. The developed portion is probably not more than one-third of the total; the occupied farm land is only 7·6 p.c. and the currently accessible forested land 16·1 p.c. of the total. The population of Canada, estimated at 15,195,000 on June 1, 1954, may be compared with 159,696,000* for the United States (1953) and with 55,772,000 for Brazil (1953).*

1.—Approximate Land and Fresh-Water Areas, by Province and Territory

NOTE.—A classification of land area as agricultural, forested, etc., is given at p. 20.

Province or Territory	Land	Fresh Water	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles	
Newfoundland (incl. Labrador)	147,994	7,370	155,364	4·0

Section 1.—Physical Geography

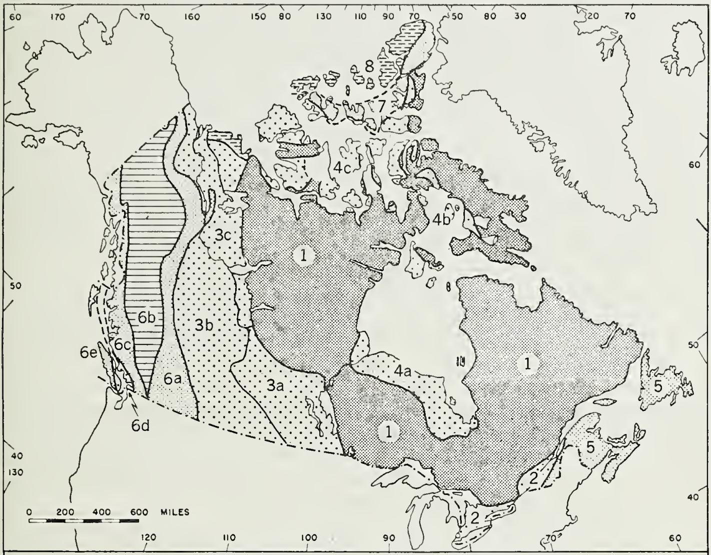
Subsection 1.—Physiographic Divisions

Canada includes each of the major characteristic structures of the North American continent, with the exception of the Atlantic coastal plain. Structure tends to dominate relief to a remarkable degree, even though its effects have been modified by glacial and river erosion or deposition. Consequently, structural regions have become main physiographic divisions. Basically, Canada consists of a central rocky upland, or shield, sloping down to flanking basins filled with sedimentary strata and rising again at its margins to mountains of folded rocks, interspersed with igneous intrusions.

---

* *United Nations Statistical Yearbook, 1953.*

Eight physiographic regions dominate the country: (1) The Canadian Shield; (2) the Lower Great Lakes-St. Lawrence Lowlands; (3) the Western Interior Lowlands of the Prairies and the Mackenzie basin; (4) the Northern Interior, that is, Hudson Bay Lowlands and those of the southern Arctic Archipelago; (5) the mountains of the Canadian Appalachians; (6) the Western Cordilleras; (7) the Arctic ranges, the proposed name for which is the Innuitias; and (8) the Arctic Coastal Plain*.



PHYSIOGRAPHIC REGIONS OF CANADA

1. Canadian Shield
2. Lower Great Lakes — St Lawrence lowland
3. Western Interior lowlands:
   a. Central lowlands
   b. High plains
   c. Mackenzie lowlands
4. Northern Interior lowlands:
   a. Hudson Bay lowlands
   b. Foxe basin "
   c. Southern Archipelago lowlands
5. Canadian Appalachians
6. Western Cordilleras:
   a. Rockies
   b. Interior Plateau and Massifs
   c. Coast Range
   d. Inner Passage
   e. Insular Mountains
7. Innuitias
8. Arctic coastal plain

The Canadian Shield.—The Canadian Shield, covering an area of about 1,850,000 sq. miles, or nearly one-half the country, is the core of the continent. Broad in the north, between Davis Strait and the Mackenzie basin, it tapers towards its southern extremity in Minnesota. Its eastern edge is tilted up to present the Torngat Mountains of Labrador and the mountains of Baffin Island, with heights of over 5,000 feet. The southern and western sides form much lower uplands, of from 600 to 1,200 feet. They are broken by faults and end in a zone of lake-filled basins, including the Great Lakes, Winnipeg, Athabasca, Great Slave and Great

---

* *See* reference, p. 10.

Bear lakes. The north consists of a series of low prongs, like the Melville and Boothia peninsulas, flanked by channels and islands. The centre of the Shield has been depressed and is occupied by Hudson Bay and its arms and outlets. The whole makes up a knubbly, rocky plateau with old worn-down mountains above and enclosed plains beneath its general surface.

The rocks of the Shield comprise two series, the Archæan and Proterozoic, including very ancient sedimentaries, together with igneous intrusions, and metamorphic belts. The Archæan rocks are dominantly crystalline in the form of massive domes of from 1,200 to 1,400 feet high; they also embrace small sedimentary depressions. The Proterozoic rocks are mainly sedimentary and often lie in wide, shallow basins, 600 feet or more below the surrounding uplands. The more important of these are the Coppermine, Thelon, Athabasca and Dubawnt plains in the northwest, the Port Arthur lowland in the southwest, and the Mistassini plain and Ungava trough in the east. The Proterozoics were frequently squeezed up into ranges of fold mountains such as the Bear and Snare Mountains south of Great Bear Lake, the Slave and Nonacho Mountains south of Great Slave Lake, the Athabasca and Tazin Mountains, east of Lake Athabasca, the Cuyuna and Penokean Mountains to the north and south of Lake Superior, the La Cloche Mountains north of Lake Huron and, finally, the Ungava Mountains in central Labrador.

The Shield may be subdivided on the basis of changes in the trend of rocks from place to place. In the south there lies the Grenville province, with an over-all trend from southwest to northeast. North of a line through Lake Nipissing and Lake Mistassini, occurs the Superior province with a west-east trend. It extends north from Lake Superior to about the Nelson River west of Hudson Bay and Great Whale River east of the Bay. The Ungava province occupies the northeast, with a west-southwest to east-northeast trend. Its counterpart is the Churchill province, between Lake Winnipeg and the Dubawnt plain, with a southwest to northeast trend. Finally, in the far northwest is the Slave province where the rocks trend from south-southwest to north-northeast.

The whole of the Shield has been glaciated. Current opinion favours Baffin Island and the high eastern rim of the Shield as the main source of ice; the ice sheets spread out, however, far to the west and south, pushing across to the Rockies, practically to the confluence of the Mississippi and Ohio Rivers, and to Long Island. The ice deepened pre-existing valleys, scooped out some of the softer plains, wore down ridges and spread quantities of debris. As it melted away it created huge frontal lakes, such as the predecessors of the Great Lakes, of the western lakes, and of the various 'clay belts', that now occupy hollows in the Shield. These lakes left behind extremely valuable lacustrine clays and beach gravels that have given the Shield the few agricultural areas it possesses. Post-glacial rivers, too, have benefited from the ice-cut or ice-ponded lakes, obtaining a large volume and a steady flow that make them ideal for hydro-electric development.

Shield structures the world over are peculiarly favourable to metal formation. Thus the Canadian Shield is Canada's principal source of iron, gold, nickel and radio-active metals and has also important supplies of copper, lead and zinc. Recent strides made in the exploitation of these mineral deposits as well as in the development of the vast forest and water-power resources of the area have attracted settlement as never before. The new communities afford important markets for the agricultural produce of the western provinces and the manufactured goods of Ontario and Quebec, and thus the resources of the Shield constitute a factor in cementing together the eastern and western portions of the country. In the north, however, climatic conditions and inaccessibility have prevented extensive colonization.

The Lower Great Lakes-St. Lawrence Lowlands.—Flanking the Shield to the south and southeast they consist of gently dipping or almost flat strata of Palæozoic sediments. Laid down in epi-continental seas in beds of mud (shale), sand and limestone, these strata produced a belted lowland with distinctive though subdued relief. The belts of shale form low vales and the belts of limestone stand up as prominent scarps, the most famous of which is the Niagara Escarpment. The whole region was greatly modified by ice and, as the ice melted, depressions became lakes. The glacial lakes were much larger than those of to-day. Glacial Lake Algonquin covered the three upper Great Lakes, together with Lakes Nipigon and Nipissing. It flowed out to the sea by the Mattawa-Ottawa and the Trent river valleys. When it receded it left behind important plains at Port Arthur, Nipigon and North Bay. Lake Erie developed from a succession of glacial lakes at different levels and consequently is surrounded by a number of sandy deltaic deposits, beach ridges and lacustrine flats, each of which has its own role in diversifying agriculture. Lake Ontario is the successor to Lake Iroquois and is surrounded by the old Iroquois beach which stands out everywhere and provides sites for roads and settlements. Farther east, the lower Ottawa and St. Lawrence valleys were invaded first by glacial Lake Champlain and then by the Champlain Sea. Here also, deltaic sands, beach gravels and lake-bottom clays play a pronounced part in agriculture and in the distribution of settlement. The ice left large terminal or inter-lobate moraines, the most significant of which are the Horseshoe moraine in southwest Ontario and the Oak Ridge moraine in central Ontario. These provide catchment basins for many small rivers.

The Lowlands may be divided into four sub-regions: Southwest Ontario, west of the Niagara Escarpment; Central Ontario, between the Escarpment and the Rideau Hills [these are a spur of the Shield (the Frontenac axis) between the Algonquins and the Adirondacks]; Eastern Ontario and the Montreal Plain; and the estuarine plains of Quebec and Anticosti Island.

The Lowlands are poorly endowed with fuel and other mineral resources, except for the natural gas fields and the salt deposits of southwest Ontario. However, the area is the most southerly part of Canada, has a very favourable climate and good grey-brown soils, and is therefore very productive. The immense water-power potential of the Niagara and St. Lawrence Rivers and of the rivers plunging down from the Shield or the Appalachians is a major asset. Although the Lowlands comprise Canada's smallest region, they support nearly two-thirds of the country's population.

The Western Interior (Prairies and Mackenzie) Lowlands.—The largest plains in Canada, they occupy a truly continental depression between the Shield and the Rocky Mountains, long the site of shallow seas that expanded and contracted from Palæozoic to Cenozoic times. Sedimentary rocks laid down by rivers and by these seas in almost horizontal strata dominate the scene. They have been attacked, since, by differential erosion, the softer beds being worked down into basins and the harder beds standing up as intervening scarps.

The Prairies have thus come to occupy three levels or steps. The lowest consists of the Manitoba plain, of Palæozoic rocks, dipping gently away from the Shield. This step is at an elevation of from 600 to 900 feet. Much of it is floored by fertile glacial clays and beach ridges left by glacial Lake Agassiz that once filled the Red and Assiniboine Rivers and the flats around Lakes Winnipeg, Manitoba and Winnipegosis. It gives way, westward, to the great Cretaceous escarpment known as the Manitoba Scarp. This Scarp has been cut into deeply by the Assiniboine, Swan and Saskatchewan Rivers and really exists as a series of uplands of from 1,600 to 2,600 feet high called the Turtle, Riding, Duck, Porcupine and Pasquia Mountains.

The second Prairie step stretches westward from this Scarp at a mean altitude of 2,000 feet. It, too, was glaciated. When the ice retreated large glacial lakes were left, known as Lakes Souris, Regina and Saskatoon. Lake-bed deposits to-day form some of the flattest and most fertile areas. Elsewhere, the ground is rather hummocky, with innumerable sloughs. Another great scarp occurs west of Weyburn and Moose Jaw; it is a continuation of the Missouri Coteau, a well-marked feature in the United States, and is divided by great re-entrants into individual sectors, the most important of which are Wood and Bear Mountains.

West of the Coteau extends the third and highest Prairie step with an altitude of between 3,000 and 4,300 feet. In the south it is quite hilly, where the Cypress Hills rise above it to shed the waters into the Saskatchewan or Missouri basins. Covered with till, it has generally a slightly rolling surface, suited particularly to ranching. Old glacial lakes along the Bow and Oldman Rivers provide excellent agricultural areas, as do outwash plains in front of the moraines between Calgary and Edmonton.

The three Prairie steps are united by the great arms of the Saskatchewan River flowing from the Rockies to Lake Winnipeg, and also by the soil zones which form broad west-east arcs. Railways, roads and crop-belts accentuate these natural ties. So also do the coal, oil and gas fields. The Prairies are underlain by Canada's chief fuel-bearing rocks. From Estevan through Drumheller to Macleod are a succession of coal fields. Southwest Manitoba and south Saskatchewan lie on the edge of the Williston oil basin. Western Alberta is the site of another large oil field. Gas is important in southern Alberta and in the Peace River district.

A low divide of moraine-capped hills separates the Prairies from the Mackenzie Lowland. This huge area, 1,100 miles long and as wide as 300 miles, consists of an asymmetrical plain, tilted from plateau-like levels in the west, at 4,000 feet, to basin-like stretches in the east, at 500 feet. The main channel follows the eastern depression. Long, rapid, deeply entrenched tributaries, such as the Athabasca, Peace, Liard, Arctic Red and Peel Rivers, come in from the west. Where the Lowland meets the Shield, a few pronounced hollows occur, filled with great lakes. These were much larger during glacial times and consequently glacial-lake beds are exposed all around Lesser Slave, Athabasca, Great Slave and Great Bear Lakes; the more southerly of these areas provide reasonably good agricultural or forest lands. The Athabasca and Peace Rivers, emptying into glacial Lake Athabasca, formed extensive sand deltas; an even larger delta of this type is the one formed by the Slave River at Great Slave Lake. The Mackenzie delta is one of the largest on the continent.

Though the southern part of the Lowland, particularly in the Peace River district, forms good agricultural land, the northern part is climatically unsuited to commercial farming. The lead and zinc deposits at Pine Point and the oil field at Norman Wells, together with oil potential in the middle Mackenzie and Peel basins, are valuable northern assets.

The Northern Interior (Hudson Bay and Inner Arctic) Lowlands.—Palæozoic sedimentaries, they dip gently north from the main height of land between the Hudson Bay and Great Lakes drainage basins. They are thus a parallel structure to that of the St. Lawrence Lowlands, but there the likeness ends. In the past, marine transgression buried the northern Palæozoics, masking the effects of the underlying rocks. Much of the land, then, consists of great stretches of old marine beds sloping down from one raised beach to the other. Through these thrust occasional masses of drumlins and periodic outcrops of rock. Moreover, the climate is arctic and therefore vegetation is limited to grass, moss and lichen, and soil development is inhibited. Thus these northern plains are of little economic value except for some hunting and trapping.

The plains may be divided into four sub-regions: the coast plain of Hudson Bay, between Churchill and Moosonee; the southern part of Southampton Island, and Coats and Mansel Islands; most of the islands and parts of the coast of Foxe Basin; and parts of the southern Arctic Archipelago, including northwest Baffin, Somerset, Prince of Wales, eastern Victoria and eastern Banks Islands.

The Canadian Appalachians.—These are a part of the great range of fold mountains extending from Newfoundland through the Maritimes and southeast Quebec to Tennessee and, beyond the Mississippi, to Arkansas. They were thrown up chiefly in Silurian, Devonian and Carboniferous times, thus involving Palæozoic strata. In those times, two long geosynclines ran through the region—the Laurentian and the Acadian. The former extended from northwest Newfoundland through the Gaspe Peninsula and southeast Quebec, and gave birth to the Long Range of Newfoundland and the Shickshock and Notre Dame Mountains of Quebec. The Acadian geosyncline reached from southeast Newfoundland through Nova Scotia and eastern New Brunswick and was responsible for the uplands of those regions.

Between the mountain ranges are wide basins, floored by sandstone, notably those of Prince Edward Island, Minas basin, and the Annapolis and St. John valleys. The whole complex mass of mountains was planed down by prolonged erosion, so that elevation is moderate, not more than 4,200 feet, and outlines are long and smooth with few sharp crests. The name of the highest area, Tabletop Mountain in the Shickshocks, is indicative of the subdued topography. Subsequently the region was glaciated and small glacial lakes, valley moraines and outwash fans play a significant role in scenery and occupation. Raised beaches to a height of 250 feet line many stretches of coast and are marked by roads and settlements. The rivers have been strongly rejuvenated and are lined with terraces, particularly valuable for cultivation. Intrusions of granite and trap are frequent. The trap sill forming North Mountain in Nova Scotia encloses the famous Annapolis Valley.

Many of the igneous intrusions are associated with metals, as at Bathurst in New Brunswick where large deposits of lead and zinc are found. At one time gold was mined about the intrusions in Nova Scotia. A large deposit of iron at Wabana and deposits of lead and zinc at Buchans, Newfoundland, are important. On the edge of the region, in the Eastern Townships of Quebec, is the world's largest supply of asbestos. Finally, significant deposits of coal occur in Cape Breton Island, Nova Scotia, and on the coasts of Northumberland Sound in New Brunswick. Thus, though the fertile plains of the sheltered basins included in the fold belts have long made the region predominantly agricultural, the mineral resources are the basis for limited but thriving industries. Lumbering on forest-clad hills and fishing from the bays of a much-indented coast further diversify the activities of the region.

The Western Cordilleras.—These consist of a belt of lofty ranges, deep troughs and broad plateaux, extending for 1,400 miles through the Yukon Territory and British Columbia, and having a width of up to 500 miles. The Cordilleras are characterized by intensive folding, elevation and faulting, the intrusion of enormous batholiths—igneous masses that warped-up overlying sedimentaries—and by volcanic activity. They are made up, therefore, of folded sedimentaries, igneous masses and metamorphic rocks. Although older rocks are exposed, Mesozoic and Cenozoic rocks predominate. In Precambrian times the geosynclines formed, in which the Yukon group of sediments in Yukon Territory and the Shuswap group in British Columbia were laid down. Later vast depressions occurred where sediments gathered that are now folded into the Purcells and southern Rockies. The accumulation of great depths of sediment, 20,000 feet or more thick, continued through Palæozoic into Mesozoic times. Then in Jurassic times violent volcanism, folding and the intrusion of granites occurred in the outer belts, throwing up the Coast and Selkirk Ranges. The Rocky Mountain system came into being during Cretaceous and Tertiary times.

The whole region was partly planed down and there is a frequent accordance of summit levels. However, subsequent uplift led to a renewed attack on the land by river and sea, and deeply entrenched rivers, fringed by pronounced terraces, are common. Glaciation has further deepened the valleys and eaten into the divides, leading to knife-like ridges and horn-shaped peaks. Eventual drowning of the coastal fringe made islands of outlying ridges and deep fjords of coastal troughs, producing a highly articulated shore line.

The Cordilleras may be divided into five structures: the Rocky Mountain system; the interior basins and plateaux; the Coast Range; the Inner Passage along the coast; and the outer insular arc.

The Rocky Mountain system begins, in Canada, with the Richardson Range, of moderate elevation, heavily glaciated and then dissected by rivers on its flanks, but with no marked peaks. Southwards is the Peel Plateau of flat sedimentary rocks, eaten into isolated tablelands by river action. Farther south occur the Mackenzie Mountains, with more intensively folded ridges and ice-serrated peaks rising to 9,000 feet. These are separated from the Rockies proper by a pronounced gap, that of the Liard River. The Rockies are composed partly of highly folded beds and partly of nearly flat beds that have been uplifted to great heights. They are split by faults and have been attacked by rivers so successfully as to give way to low passes such as Finlay Forks, Pine, Yellowhead, Kicking Horse and Crowsnest. Three clusters of peaks occur, dominated by Churchill Peak, 10,500 feet, in the north, Mount Robson, 12,972 feet, in the centre, and Mount Assiniboine, 11,870 feet, in the south.

The interior basins and plateaux are considerably lower than the Rocky or Coast Ranges. On the east they begin at a well-marked break called, in part of its course, the Rocky Mountain Trench. This carries the headwaters of the Liard, Peace, Fraser and Columbia Rivers. The Yukon Plateau, in the north, lies between Dawson and Selwyn Ranges. It has flat summits that are separated by deeply cut rivers. Southward, it passes to the Cassiar Mountains, strongly intruded with igneous masses. Thence the Stikine Plateau runs as far as the Skeena-Hazelton Ranges, which are again largely of intruded igneous rock. South of these is the Interior Upland of British Columbia, a wide area of flat-topped uplands from 3,000 to 4,000 feet high, with deep, many-terraced rivers flowing between. The gorge of the Fraser River is one of the most spectacular in Canada. The river basins afford considerable fertile land for cultivation and the plateau tops provide excellent pasture for cattle grazing. Toward the United States border are the Columbia Mountains, a complex system of folded and intruded rocks and fault-line depressions, rich in minerals and with productive river and lake terraces.

The Coast Range has the highest peaks in Canada including Mount Logan, 19,850 feet, in the Yukon Territory, and Mount Waddington, 13,260 feet, in British Columbia. The Canadian portion starts in the high, partly volcanic, partly folded mass of peaks known as the St. Elias Range. Here active glaciers have cut deep troughs and sharp ridges. South, the Coast Range has some large batholiths. The crystalline rocks have frequently become exposed by the very active erosion caused by heavy precipitation from oceanic airs. Consequently, most of the Coast Range, despite its massive structure, consists of a saw-like series of sharp peaks and ridges.

The Inner Passage, along the coast, comprises the Georgia, Queen Charlotte and Hecate Straits. It is a continuation northward of the string of great depressions occurring in the United States, such as the Sacramento and Willamette Valleys, but it became drowned by the sea and there is now little plain left. The mainland and island coasts rise very steeply to lofty mountains. The Passage has a very large number of arms, most of which are ice-cut fjords or fault depressions. These give it a highly indented shore, of utmost value for coastal fisheries and useful too in providing ready access to a wealth of lumber.

The outer insular arc is made up of outlying ridges, in line with the Coast Range of the United States, which, however, have become partially submerged under the sea. The result is a number of hilly or mountainous islands enclosing small fertile basins. The Queen Charlotte group in the north and Vancouver Island in the south are the most important.

The Western Cordilleras are very complex in structure and consequently have a wide range of resources. In some of the narrow plains, sedimentary rocks are underlain by coal fields as at Fernie and Nanaimo in British Columbia and at Carmacks in the Yukon Territory.. Oil is purported to lie under plateau sections in the Yukon. Gold made the Cariboo district of British Columbia and the Klondike area of Yukon Territory world-famous in their time but of greater importance are the large mineral masses usually associated with igneous intrusions, of which copper, lead and zinc are the most significant. To this wealth of metals, the Cordilleras add vast hydro-electric potential and dense, extensive forests. Agriculture is limited except on the Fraser delta and in one or two of the interior trenches.

The Arctic Ranges, or Innuitias.—These make up an extensive belt of fold mountains, 800 miles long, involving rocks from Silurian to Cretaceous times. Folding started in Appalachian times in Silurian and Devonian beds. It overlapped that of the Cordilleras in Cretaceous and Cenozoic beds. Two sub-regions exist—the Ellesmere Island system and the Parry Islands folded belt. The Ellesmere Island system seems to indicate a double orogeny, in Silurian and then again in Cretaceous times. The results have been fairly high ranges of from 6,000 to 10,000 feet where folding and thrust faulting are much in evidence. The trends of the folds are from southwest to northeast. The Parry Islands fold belt, trending more nearly west-east, consists of typical Appalachian-like folds in canoe-shaped structures about 2,000 feet high. They include large tracts of horizontal strata.

Farther north in the Sverdrup Islands and in those discovered by Stefansson, the strata form a coast plain* gently sloping towards the Arctic Ocean. The beds are much disturbed locally by piercement domes, notably in Axel Heiberg and Ellef Ringnes Islands. Geological discovery has not yet proceeded to the extent of determining the mineral wealth of the Innuitias. However, piercement domes are frequently the sites of the accumulation of pools of oil. The climate is so severe that it precludes any possibility of agricultural development and has even limited hunting and fishing activities.

---

*See region 8, map, p. 3. Axel Heiberg Island, and those parts of Ellesmere Island shown on map as in region 8, are now (Nov. 1954) reclassified in region 7.

Subsection 2.—Hydrographic Features

Lakes and Rivers.—Canada's fresh-water lakes and rivers cover an area of 268,611 sq. miles. The outstanding lakes are, of course, the Great Lakes, though only part of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table **2**.

2.—Elevations, Areas, and Depths of the Great Lakes

Lake	Elevation Above Sea-level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles
Superior	602·23	383	160	1,302	31,820	11,200
Michigan (U.S.A.)	580·77	321	118	923	22,400	—
Huron	580·77	247	101	750	23,010	13,675
St. Clair	575·30	26	24	23	460	270
Erie	572·40	241	57	210	9,940	5,094
Ontario	245·88	193	53	774	7,540	3,727

There are no tides in the Great Lakes although considerable variation in water-levels is occasioned by strong winds.

Other large lakes of Canada, ranging in area from 9,000 to 12,000 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, there are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

3.—Elevations and Areas of Principal Lakes, by Province

NOTE.—Areas given are for mean water levels. In the case of those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

Nelson River	368,182		
Western Hudson Bay	383,722	**Gulf of Mexico Basin**	**10,121**
Total	**1,379,160**	**Area, Canada (less Arctic Archipelago)**	**3,310,396**

[1] Areas are approximate and are exclusive of those portions of the basins of all rivers that lie in United States territory.

In Eastern Canada, the Great Lakes and St. Lawrence drainage basin dominates all others and forms an unequalled system of navigable inland waterways through a region rich in natural and industrial resources. From Duluth at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence, the distance is 2,280 miles. The St. Lawrence waterway and its tributaries, most of which have lakes available for reservoiring, have very large developed and potential power resources.

The greater part of Canada drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of Western Canada, but otherwise the rivers of the West, east of the Rockies, run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie River, which drains Great Slave Lake, is, with its headwaters, the longest river in Canada (2,635 miles) and its valley constitutes the natural transportation route through the Northwest Territories down to the Arctic Ocean. From Fort Smith, on the Slave River, large river boats run without any obstruction down to Aklavik on the delta of the Mackenzie, a distance of 1,292 miles. Table **5** gives the lengths of the principal rivers with their tributaries classified according to the four major drainage basins.

5.—Lengths of Principal Rivers and Their Tributaries

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus, the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

Drainage Basin and River	Length	Drainage Basin and River	Length
	miles		miles

Ocean Areas and Seas.—A comprehensive description of the ocean areas and seas of Canada would include sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea-floor and the scope of the information presented here is, therefore, restricted to this and a few salient features of the Atlantic, Arctic and Sub-Arctic, and Pacific marginal seas surrounding Canada. Further details are given in the 1947 Year Book, pp. 3-12.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged Continental Shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This Shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Polar Sea. The outer edge of the Shelf, known as the Continental Shoulder, is of varying depths of from 100 to 200 fathoms before the Shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic Continental Shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia, the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastwise shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the Shelf.

The main topographical features of the Atlantic marginal sea-floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore-banks washes away enormous masses that are deposited over the surrounding sea-floor. The conformation of the continental sea-floor is, therefore, constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Arctic and Sub-Arctic.—The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental Shelf surrounding the North Polar Sea on which lie all the Arctic Islands of Canada, Iceland, Greenland and most of those of Europe and Asia. The Polar Shelf develops its maximum width on the 80th meridian of west longitude where it extends from the south of James Bay to the north coast of Ellesmere Island, a distance of over 2,000 miles.

The floor topography of this continental margin is somewhat hypothetical but sufficient has been charted to indicate an abrupt break at the northern oceanward edge. This steep continental terrace borders the whole western side of the Canadian Archipelago and constitutes one of the most striking and significant features of the Polar regions. From this declivity, deep well-developed troughs, cut by glaciers, enter between the western group of islands. A ridge across Davis Strait on which the depth is about 200 fathoms separates this basin from the open Atlantic.

Hudson Bay and Hudson Strait bite deeply into the continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea-floor are indicated but, except in inshore waters, few navigation hazards have been located.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the Continental Shelf extends from 50 to 100 sea-miles to its oceanward limit where depths of about 200 fathoms are found. There the sea-floor drops rapidly to the Pacific Deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land-masses are the dominant features of the Pacific marginal sea. Along the whole coast continuous navigation is afforded through an inside passage sheltered from the sea by a protective barrier of islands. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating great caution in navigation.

Subsection 3.—Islands

The northern and western coasts of Canada are skirted by clusters of islands. Those on the north include a very large group within the Arctic Circle. On the west coast, Vancouver Island and the Queen Charlotte Islands are the largest and most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, Anticosti Island and the Magdalen group included in the Province of Quebec are the chief islands off the eastern coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

Subsection 4.—Mountains

The predominant orographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in other parts of the country are shown in Table 7.

Section 2.—Main Physical and Economic Features of the Provinces

Politically, Canada is divided into ten provinces and two territories. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act, 1867, and its amendments. As new provinces have been organized they have been granted political status equivalent to that of the original provinces. The Yukon and Northwest Territories, with their present boundaries, are administered by the Federal Government. The chief physical and economic features of each of the provinces and of the territories are reviewed in the 1954 Canada Year Book, pp. 13-19. Details of resources and their development are given in the different chapters of this volume (*see* Index).

PART II.—LAND RESOURCES AND PUBLIC LANDS

Section 1.—Land Resources

Extensive areas of arable and forested land, together with vast water-power resources, are the basis of Canada's industrial and commercial life. Agricultural land has been developed on a substantial scale and is well distributed from east to west. It is characterized by a diversity of contour, soil and climate and is thus capable of producing a great variety of crops in a volume well beyond domestic requirements. Of the total land area, 15·5 p.c. is estimated as suitable for cultivation and of this area a little less than 50 p.c. is, at present, occupied. Most of the unoccupied land considered potentially suitable for agriculture is now under forest. Altogether, about 42 p.c. of the total land area of the country is forested. This vast extent is of immense importance, not only in the production of lumber, pulpwood and fuel, but also in tempering the climate and conserving the water supply.

This Section of the Year Book is concerned only with those summary phases of the subject that may be regarded as falling under the definition of physiography used in its wider interpretation. Detailed information relating to individual natural resources and their development will be found in later chapters, together with data concerning the efforts directed to conservation of those resources.

Table 1 classifies the land resources as agricultural, forested or unproductive. Duplication is unavoidable, to the extent of agricultural lands under forest, between the totals of present and potential agricultural land and the totals of forested land. Figures of total land area and forested area are obtained from the Geographical Branch of the Department of Mines and Technical Surveys; those of agricultural lands are based on the 1951 Census.

1.—Land Area, classified as Agricultural, Forested or Unproductive, by Province

NOTE.—The areas included in this table are estimates only, with the exception of the figures of occupied agricultural land, which information was obtained from the 1951 Census.

[1] Less than one square mile. [2] Included also in *Forested Land;* duplication eliminated in the item *Net Productive Land.* [3] For purposes of this table, the unoccupied agricultural land of Newfoundland (figures for which are not available) is presumed to be nil. [4] Agricultural land of all classes and land that has agricultural possibilities in any sense. [5] Exclusive of Labrador. [6] Total agricultural land plus forested land minus forested agricultural land. [7] Includes open muskeg, rock, road allowances, urban land, etc. [8] Includes forested land in Labrador, area of which is not available.

Section 2.—Public Lands

In Table 2, classifying the area of Canada by tenure, items 2, 3 and 4 are obtained from Federal Government sources and items 1, 5 and 6 from Provincial Government sources.

2.—Area classified by Tenure, (circa) 1954

Note.—In previous editions of the Year Book this table was intended as a classification of "land" area only (excluding fresh water) and was therefore based on land area total. However, it has been concluded that the component items do include fresh-water areas, particularly rivers and the smaller lakes, so that the table is now based on "total" area.

[1] Includes the Gatineau Park (70 sq. miles) and the Quebec Battlefields Park (0·36 sq. miles) which are under federal jurisdiction but are not technically National Parks. [2] Less than one square mile. [3] Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is otherwise forbidden, and as reserves for reindeer grazing, but which are not regarded as National Parks. [4] Includes Wood Buffalo Park (13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park. [6] That portion of Wood Buffalo Park in N.W.T. [6] Three areas, though not designated as Provincial Parks, are used for recreational purposes and are therefore included here (*see* p. 37)

Subsection 1.—Federal Public Lands

Public lands under the administration of the Federal Government comprise lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and, in general, all public lands held by the several Departments of the Federal Government for various purposes connected with federal administration. The Dominion Lands Act (R.S.C. 1927, c. 113) and the Ordnance and Admiralty Lands Act (R.S.C. 1927, c. 58) were repealed in 1950, and the Territorial Lands Act (R.S.C. 1952, c. 263) and the Public Lands Grants Act (R.S.C. 1952, c. 224) were enacted to replace them and became effective June 1, 1950.

The largest areas under federal administration are the Northwest Territories and Yukon Territory amounting to 1,511,979 sq. miles or about 40 p.c. of the surface of Canada. This part of the national domain, which is all north of the 60th parallel of latitude, is under the administration of the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources.

THE NORTHLAND—CANADA'S CHALLENGE*

On Dec. 16, 1953, the name of the Federal Department of Resources and Development was changed to Northern Affairs and National Resources. It was an important change, because it marked the first time that a department of government was designated, in its title, as being responsible for administering Canada's Northland. In all the years since Confederation, that responsibility had been submerged in the name of a Branch, or even a Division, of such Departments as Interior, Mines and Resources, and Resources and Development. It was a responsibility administered without fanfare.

Under these circumstances, the Canadian North was something of a blind spot in the eyes of Canadians living south of the 60th parallel of latitude. People did not much care, perhaps because they already had their local interests and a natural preoccupation with developing the southern two-thirds of their country. Where there was interest, it was often sporadic, roused by the romantic poems of Robert Service or novels about the red-coated Mounted Police, and excited by tales of gold-rush days, the discovery of oil at Norman Wells, or of radium at Great Bear Lake. Interest in the North flared up—and died—quickly, leaving only romantic impressions and little precise knowledge.

This change in name of the Department signified a new fact emerging, the fact that in recent years there has been a rapidly growing and much more permanent interest in the importance of that northern hinterland. But no new fact comes into being without the influence of prior events. What is interesting here is the series of events that wakened in Canadians the realization that they owned an important northern frontier.

Perhaps the most important factor in this awakening was simply that Canada, during World War II, had come of age. Until then, Canadians had been busy justifying the existence of the two great transcontinental railways. Time, energy and ingenuity were needed to settle and develop the vast areas opened up by that continent-wide system of transportation. In those years, Canada was like a youth who had not quite grown up. By the end of the second world war, much of the settlement and development of the southern fringe of the country, in which the majority of Canadians live, had been accomplished. Those with vision began to look farther afield—to the North. It was a time of peace and prosperity and Canada was strong enough to tackle new tasks.

---

* Prepared under the direction of R. G. Robertson, Deputy Minister of the Department of Northern Affairs and National Resources, Ottawa.

This new preoccupation with the North, as it happened, coincided with the discovery that, on a long-term basis, new sources of raw materials were a prime necessity to the whole civilized world. This was particularly true of minerals. Old sources of supply were being depleted, and the rate of that depletion was accelerated by two major wars.

As eyes turned to the North, it became evident that the grounds for interest there extended beyond the realm of the economic. Living in that frozen land were 25,000 Canadians—native Indians and Eskimos, fur traders, missionaries, fishermen, miners, scientists and government officials. The majority of these people had a permanent stake in the North and were raising their families there. Their experiments in such fields as education, health and welfare and political organization could hardly help but have significance for the rest of the country. Furthermore, many of them were living what might be called a frontier way of life, with all its implied virtues of sturdiness, self-reliance, hospitality and social responsibility. Clearly, any investment in the enlargement of this frontier would pay ample dividends through the freshening influence of these virtues on the whole national life.

Another factor that directed the attention of Canadians to their Northland was its geopolitical position. Geopolitics, defined as the politics of a country as determined by its geographical position, is a term that has been used increasingly since recent advances in transportation and communication techniques have caused such a 'shrinkage' in the size of the world. Only a generation ago there were many places which, because of their isolation, had no political significance internationally. To-day, that is not so. Any place on land or sea can be reached from any other place in a matter of hours. Distance, if the incentive is great enough, is no longer a barrier. That is why the Yukon and Northwest Territories have assumed an added significance in world affairs. The shortest route by air between the leaders of the two major and opposing ideologies, the United States and the Union of Soviet Socialist Republics, is over the Canadian North. In view of this, it is not surprising that defence is a major aspect of the Canadian Government's interest in that area.

In the long-term view, however, it is in its economic importance that the Northland acts as a permanent magnet; in its role as a supplier of mineral wealth. It is the development of this wealth that constitutes the real challenge of the North to Canada.

Is it, then, a question of merely developing the Canadian North as other parts of the country have been developed in the past? Unhappily, it is not quite that simple. The whole key to the economic development of the Yukon and Northwest Territories is adequate transportation, without which much of the wealth is inaccessible. Admittedly transportation has been a problem in developing other parts of the country, but in those high latitudes there are two unusual factors that come into play and magnify the problem many times. These factors are climate and distance. They have made a nightmare of transportation problems in the Canadian North. They loom up behind every difficulty.

When the Canadian Pacific and Canadian National railways were built they traversed long stretches of unsettled land. But they were built with the firm hope that the vacant land would soon be covered with prosperous farms, each contributing to the revenue of the railways. But a railway or any other form of transportation in the Canadian North cannot count on such revenue. The unsettled land it traverses is unable to support an agricultural industry. The winters are too long and the soil is too poor. The railway, lacking revenue from intermediate points along its route, will be forced to levy high rates in order to stay in business. The necessarily high rates will be further aggravated by the distance factor. It is over 400 miles from railhead at Grimshaw, Alta., to the lead-zinc deposits at Pine Point on the south shore of Great Slave Lake, N.W.T. It is another 100 miles across the lake to Yellowknife. It is another 300 miles in a fairly direct line to Port Radium on Great Bear Lake. From Port Radium to Coppermine on the Arctic Coast is another 200 miles. North, south, east or west, the picture is much the same—scattered settlements and barren distance in between and everywhere the problem of distance from markets and distance from sources of supply. Pound for pound and mile for mile, the cost of carrying goods in the North will inevitably be higher than elsewhere in Canada.

Climate and distance then, will tend to force the development of the Northland into channels which, if at present unpredictable, will undoubtedly be unique in Canada. It may be unique also because of the role of the Federal Government. In other parts of the country, the enterprise of individuals and groups carried the main burden of development. In the Northland, if an hospitable economic climate is to be created in spite of adverse physical climate and barren distance, the role of the Government in the earlier stages of development at least, may have to be much more active than in the south.

The unshackling of northern wealth will, to some extent, follow lines of development already laid down, but the policies and practices of the past must be altered if future development is to be achieved on the scale that the times require.

Mineral Development.—Down to the present, development has consisted mainly of exploiting exceptionally rich or very large mineral deposits. This was unavoidable because of high production costs in the North; nevertheless, it meant that development was limited to a relatively small scale. For example, it is practicable to mine ore in northern Ontario with a gold content of about 0·15 oz. t. per ton and make a profit; in the Northwest Territories, to make the same profit, gold content of the ore must be about 0·45 oz. t. per ton. Evidently, the problem—and challenge—consists in getting costs down to a point where lower grade ore may be mined profitably on a large scale.

What has happened in post-war years in the North, when market prices were relatively high, indicates what might take place if costs could be lowered. In the first post-war year, 1946, the value of mineral wealth (excluding uranium) produced in the Yukon and Northwest Territories amounted to about $2,700,000. Gold production accounted for about $2,500,000 of this amount. Silver, lead, zinc and petroleum were produced in relatively small quantities. By 1953, the total value of mineral wealth produced (again, excluding uranium) increased to almost $25,000,000. The value of gold had risen to $12,500,000, about $10,000,000 of it from the Northwest Territories. In the Yukon Territory, the increase in base-metals mining was astonishing; in 1953, $3,800,000 worth of lead, $2,300,000 worth of zinc and $5,250,000 worth of silver were produced. These figures suggest an extraordinarily rapid growth period since 1946, which can be partly accounted for by the fact that, during the war years, the Canadian North was held dormant. At the end of the War, Northland activity spurted forward but, even granting the value of pent-up enthusiasm, it was higher prices that provided much of the impetus. Lower costs would help create the conditions necessary for similar but more permanent growth.

The increase in value of production from $2,700,000 in 1946 to $25,000,000 in 1953 was achieved from rich deposits that were known and at least partly developed before the War. In the Dawson Mining District of the Yukon where individual miners once stood knee-deep in the swirling streams and panned free gold from the gravels, great hydraulic dredges now operate: indeed, so prolific has this area been that one creek, Bonanza, has been worked over three times. The base-metals deposits of Mayo and Keno Hill were developed rapidly under the stimulus of high prices. The Yellowknife gold field was encouraged to bring its richer mines into production. The mining of radioactive ores at Great Bear Lake was stimulated when uranium, formerly a by-product in the output of radium, became vital as a source of atomic energy.

Though all this was highly satisfactory, it was quite clear that the true potential of the Canadian North could be realized only by opening up new fields, of which there are so many. That this was clear to those working in the North is shown by the fact that, since 1946, activity has been healthily divided among the three traditional stages of mining—prospecting, development and production. Inspired by the ground-breaking work of government geologists and topographers, hundreds of prospectors have penetrated the Northland, staking out the areas from which they hope the future wealth will pour.

Transportation Facilities.—Any great increase in the production of mineral wealth in the North will depend on the provision of expanded and cheaper transportation facilities. Transportation is necessary, first to discover ore bodies, then to bring in the equipment to develop them, and finally to take out the minerals. Present facilities consist of air, water and road transport; the only railway is the 110-mile White Pass and Yukon Railway, which connects the port of Skagway in the Alaska Panhandle to Whitehorse in Yukon Territory. A summary of existing services and their limitations will perhaps serve to point up the scope of the problems that must be overcome in giving the North a reasonably low-cost transportation system.

Of all the innovations that the twentieth century has brought to the Canadian North, the aeroplane has undoubtedly been the most revolutionary. It has performed perhaps its most important service in the exploration phase of mining, particularly in the Northwest Territories. From an uncertain mode of travel in the 1920's, when the skills of pilot and mechanic were often the only guarantees against disaster, it has developed into a means of transport of great reliability. Equipped with skis in winter and pontoons in summer, an aircraft has little trouble in finding a safe landing place in that lake and muskeg dotted country. It can deliver the geologist and prospector to a chosen spot, adding months to the short working season. The northern traveller no longer has to walk fifty miles to the west in order to get ten miles to the north. And those who wish to work in spring or early summer no longer need to sail north the previous year and spend a profitless winter of waiting.

In the second phase of mining—the development of the prospect—the aeroplane is playing an increasingly important role. As airstrips multiply, larger and larger commercial planes are penetrating the remote places of the North. To-day, one of the first jobs undertaken on a promising claim is the building of an airstrip so that equipment and supplies may be flown in.

Even in the final phase of mining—taking the product to market—the aeroplane is utilized. Although many commodities, such as base metals, can hardly be transported economically by air, there are some that can. Uranium concentrates and gold, for instance, are so valuable in relation to their weight that air freight is practicable.

Although air freight service has been greatly extended in recent years, the mass movement of bulk goods still depends on water transportation. Traditionally, since the time of the first explorers, the Mackenzie and Yukon Rivers have been used as highways into the Canadian North; both rank among the great river systems of the world. The series of rivers and lakes of the Mackenzie system has a total length of 2,635 miles from the headwaters of the Finlay River in the Rocky Mountains to the Mackenzie Delta on the Arctic Coast; the area drained is 700,000 sq. miles. The Yukon River, from the headwaters of the Nisutlin River in the Mackenzie Mountains, flows for 714 miles through Canada, draining an area of 170,000 sq. miles.

The first obvious drawback to these water highway systems is that they are closed to navigation for about eight months of the year. Modern industry, of course, requires a steady, two-way flow of commerce. It is difficult to compete in the open market if valuable inventories of goods and equipment are immobilized for months at a time. A second drawback is that the barges and river boats can deliver their cargoes only as far as localities along their banks. In the days when the fur trade was the only economic activity in the North this mattered little, since the trading posts were invariably built along the waterways. But it is likely that only a small proportion of the eventual mining centres will be located along the river systems, which means that supplementary transportation will be required on an ever-increasing scale.

In view of these facts, it is likely that water transportation will, in the future, be progressively dwarfed by air, and possibly by railways and roads. But bulk goods can be carried so cheaply by water that the rivers will continue to play their part in the transportation system.

It is only in recent years that roads have begun to probe into what has been described accurately as the trackless wilderness of the Canadian North. The philosophy behind road-building there has required an extremely practical basis: the road must contribute to the development of the mining industry. The exceptions to this rule are the Alaska Highway and the Canol Road, both of which were born of the strategic necessities of the second world war. The former, which traverses the southern part of the Yukon Territory, is still used heavily and is maintained by the Canadian Army. The latter, which runs from the oil fields at Norman Wells on the Mackenzie River in the Northwest Territories to a junction with the Alaska Highway about 75 miles east of Whitehorse, is no longer maintained for traffic.

The road system of the Yukon has been built partly by the Federal Government, partly by the Territorial Government, and partly by the various mining companies. From the major centres of the mining industry at Dawson and Mayo, and from Whitehorse, all-weather roads radiate to adjacent mining properties, and the three centres are themselves connected by road.

In the Northwest Territories, the only major road built to date is the 356-mile Mackenzie Highway which runs from railhead at Grimshaw in Alberta to Hay River on the south shore of Great Slave Lake. From Hay River, in winter, a road is maintained when necessary across the ice of Great Slave Lake to Yellowknife. Only 81 miles of the Mackenzie Highway are in the Northwest Territories. The Federal Government paid the full cost of building this stretch, and contributed two-thirds of the cost of the Alberta section. Connecting with the Mackenzie Highway, a 70-mile pioneer road has been built into the base-metals development at Pine Point. The Federal Government paid one-half the cost of this resource road.

Although the highway system in the Canadian North is not yet extensive, much has been learned about road-building under northern conditions that will be valuable when applied to additional construction. Some of the problems that had to be faced and that will be met with again were new in the history of engineering. Never before, for example, had Canadian highway engineers to contend with the problem of laying a road over permafrost, the permanently frozen subsoil of the North. Problems of labour, supply, equipment and climate also assumed novel forms. Thus these roads were an expensive necessity and only by substantial contribution on the part of the Federal Government was it possible to do what has been done. These contributions may be regarded as capital investments. Eventually, when enough of the mineral wealth has been made accessible, the returns will come in at a rate that will make the North far more than self-sufficient. Until that time, the assistance of the Federal Government is both justified and essential.

Hydro-Power.—There is another field, intimately related to the development of the mining industry, in which the Federal Government has provided extensive assistance—hydro-electric power. The construction of hydro-electric power projects is undertaken when a request is made by the mining interests, and usually where there is likelihood of more than one company making use of the output. Through its agency, the Northwest Territories Power Commission, the Government has built two hydro-electric plants. The first, completed in 1948, is on the Snare River about 90 miles from Yellowknife and has a capacity of 8,350 h.p. to service mines and other consumers in the area. The second, which began operating in November 1952, is on the Mayo River in Yukon Territory; it is at present delivering 3,000 h.p. to the lead-zinc-silver mines and communities in the Mayo area. The site of this plant has a capacity of 6,000 h.p. and, although present requirements are being met with the 3,000-h.p. output, future growth of the area has been provided for by the erection of installations capable of realizing the whole potential by simply adding more turbines and generators.

The Secondary Challenge—Furs and Fisheries.—It should not be inferred from the foregoing that the development of the mining industry constitutes the whole economic challenge of Canada's Northland. Though the mining industry will always be the backbone of the Northland's economy, the development of supplementary activities will play an important part. The fur trade and inland fisheries will contribute their share of wealth. To these may be added lumbering, agriculture, reindeer herding and the production of handicrafts. Economists have warned repeatedly of the dire consequences that result from depending on a 'one-crop' economy. Let demand for its product fall off, and the one-industry country or area loses its stability in a very short time. Diversification wherever and whenever possible is always held out as the most desirable state of affairs.

Much of the Canadian Northland's past—and a substantial part of its present—may be defined in terms of furs. For two centuries the fur trade was the sole basis of the northern economy. Although its value relative to mining has now declined, its absolute value has remained remarkably constant. With an average annual production value of approximately $2,000,000, it has been the major source of livelihood for almost the entire native population, and in all likelihood will continue to be so into the foreseeable future.

But changing conditions affected even this long-established industry. As the population of the Northland increased with growing industrialization, the number of forest fires grew to serious proportions. By destroying the forest cover necessary to the fur bearers and to wildlife generally, the fires became a menace to those who depended on trapping for a living. In addition, the number of trappers increased to the point where over-trapping was inevitable in many areas. These factors, plus the general improvidence of those who could see no end to nature's bounty, led the Government to adopt a policy of regulating trapping intended to ensure the economical harvesting of the fur crop on a sustained-yield basis. Native game preserves were established and restrictions were placed on the number of white trappers. Control measures, such as open and close seasons, were instituted for most mammals and maximum bag limits for certain fur bearers. The first three native game preserves were established in 1923 and, since then, three more have been added; the total area under protection amounts to almost 1,000,000 sq. miles. In addition, the Government has established smaller preserves in which even natives are prohibited from trapping and hunting. A Government forest and game protective service has been established and Government scientists are engaged in a continuing study of wildlife management problems.

Efforts to broaden the economic base of the Northwest Territories through encouragement of industries subsidiary to mining led, in 1945, to the establishment of an inland fishing industry at Great Slave Lake. Fifth largest on the continent, Great Slave Lake has an area of 11,170 sq. miles. It lies only 340 miles south of the Arctic Circle. Since the Northwest Territories is wholly under the jurisdiction of the Federal Government, the opportunity existed to institute a program of fishery management founded on scientific research and conservation measures. This opportunity was not lost.

The Fisheries Research Board of Canada made its first survey in 1944 and the following summer the lake was thrown open to commercial fishermen. Catch limits and fishing regulations were based on sound biological information accumulated by the Board. The original annual quota of 2,000,000 lb. of whitefish and trout has gradually been raised as a result of continuing surveys to a present level of 9,000,000 lb., an amount that covers both the summer and winter seasons. In 1953, the catch amounted to 5,700,000 lb., with a market value of $1,700,000.

In the first season of fishing there were 42 fishermen on the lake but so profitable did this enterprise prove that, by 1953, 305 licences were issued. The opening of the Mackenzie Highway in 1948 was a vital factor in the success of the fishery, since it provided swift and economical transportation from Hay River to railhead at Grimshaw, Alta. About 90 p.c. of the catch is marketed in the United States.

The Government maintains an inspection system at the packing houses at Gros Cap and Hay River; two patrol vessels travel the lake during the summer season and, for winter work, snowmobiles are used. The industry itself uses snowmobiles extensively in winter and altogether there are 40 of them in use at Great Slave Lake. The extensiveness of the industry, and its permanence, is indicated by the fact that one of the companies has built a 56-foot refrigerated diesel freighter capable of carrying 18 tons of fish.

The administration of the Great Slave Lake fisheries is the responsibility of the Federal Department of Fisheries. Field administration is centred in the office of the Chief Supervisor of Fisheries for the Central Area, located at Winnipeg, Man.

Lumber and Agriculture.—The existence of a thriving lumber industry at such a high latitude seems somewhat unique. The northernmost limit of tree growth extends from the mouth of the Mackenzie River on the Arctic Coast south-east to a point near Churchill, Man. Though the eastern portion of the Northwest Territories is almost completely lacking in forests, in the Mackenzie District and in the whole of Yukon Territory there are many areas of forested land important from an economic viewpoint. Because of the slow rate of growth, it is unlikely that lumbering will ever be an export industry but to whatever extent native timber can eliminate expensive imports and provide a living for the people it should be reckoned as an economic gain.

In the Yukon, local lumber supplied all the needs of the gold rush of 1898 and for 30 years after. Sawmills operating at Dawson and points along the Yukon River turned out vast quantities of lumber for buildings, flumes, sluice boxes, boats, and for thawing the frozen gravel so that the work of extracting gold might go on the year round. After 30 years, timber resources in this area were almost exhausted. To-day, however, small sawmills operate at Mayo, Dawson and various points along the Alaska Highway to manufacture building lumber and to provide fuel for steamboats on the Yukon River. In the Northwest Territories, small sawmills operate at various spots along the Slave River, at Great Bear Lake and along the Mackenzie River.

To protect the forests for the future, the Federal Government has established protection services. Headquarters for the Yukon Forest Protective Service is at Whitehorse; the Mackenzie River valley is the main centre of forest protection in the Northwest Territories, with warden stations located at Fort Smith, Yellowknife, Hay River, Fort Liard, Fort Resolution, Fort Simpson, Fort Norman, Fort Good Hope, Fort McPherson and Aklavik. Fire wardens, employed during the fire-hazard season, emphasize fire prevention publicity in addition to their other duties.

Although the climate and soil conditions of the Northwest Territories preclude the large-scale development of agriculture as an industry, small-scale farming operations have been carried on in the more favourable localities for more than 100 years. The missionaries and fur traders were the pioneers in this field and all down the Mackenzie River valley the rewards for this effort were, if not high, at least soul-satisfying. The long hours of sunshine make up for the short season of warmth.

The Government has carried out a series of extensive tests on the agricultural prospects of the Canadian North. Soil and horticultural surveys made in 1944 and 1945 led to the establishment of an experimental substation at Fort Simpson and a smaller one at Yellowknife. The soil surveys uncovered the fact that thousands of acres of potential fertility exist in the Liard, Slave, and upper Mackenzie River valleys. Even at Yellowknife, where the soil is sandy, it is possible to grow crops by using commercial fertilizer extensively.

In the Yukon, at the height of the Klondike gold rush, thousands of acres were under cultivation to supply the needs of the miners and others who swarmed into the gold fields. As the rush dwindled, agriculture also declined; to-day, however, there are few families that are not almost self-sustaining on a horticultural basis.

Experimental agricultural work by the Federal Government in the Yukon has gone on intermittently since 1915. An experimental substation operated near Dawson between 1917 and 1925 produced much factual information about land-use possibilities in that area. In 1942, a soil survey was made of lands adjoining the Alaska Highway and of those in the Yukon River basin. The following year an experimental substation was set up at Pine Creek on the Alaska Highway, about 100 miles west of Whitehorse. The location of this station permits extensive experimental work in the fertile Takhini-Dezadeash valley, which contains at least 100,000 acres of arable land. It is estimated that the Yukon has 250,000 acres of potential agricultural land.

Unique Activities.—The economic activities of the Canadian North, both major and secondary, that have been outlined thus far have all had some precedent in the more southerly parts of the country; previous experience and knowledge have been invaluable in extending their development into the North. There are, in addition, two wealth-producing activities that have no counterpart elsewhere in Canada—reindeer herding and Eskimo arts and crafts. Both stem from the need to give the natives some sort of stable outlet in order to balance the up-and-down prosperity of trapping. Both exemplify the trial-and-error method that must be followed when an area like the Canadian North is undergoing the process of adjustment to civilizing influences. For both, the trial proved to be very nearly without error.

In 1922 a Royal Commission recommended that Canada should try herding reindeer in the Northland. The practical beginning of the experiment was in 1935, when a herd of 2,370 Alaskan reindeer was brought to the Mackenzie Delta region. The reindeer thrived on a 24,500 sq. mile reserve and, over the years, have more than tripled in number. As the Eskimo apprentice herders learned the occupation, small herds were branched off from the main one and put in charge of the Eskimos themselves. There are now three such herds.

Eskimo arts and crafts are an outgrowth of the native's ingenuity in fashioning implements for himself from the meagre raw materials at hand. Soapstone and ivory were carved into useful articles such as lamps, harpoon heads and pots, into artistic models of animals and people and model kayaks. The art form existed; the role of civilization was to find permanent markets for it. Government encouragement first took the form of an annual grant to the Canadian Handicrafts Guild and later two field workers for the Guild joined the Department of Northern Affairs and National Resources. The future of arts and crafts as a steady source of income for the Eskimos seems assured; everywhere this art form is receiving enthusiastic appreciation.

The Government is constantly on the lookout for new activities that will help the natives bridge the gap between their traditional life and the civilization that is slowly developing around them. Recently, northern service officers have been appointed by the Department of Northern Affairs and National Resources; living among the natives, they will be able to meet at least one aspect of the challenge of the Northland on its home grounds. Their appointment is typical of the new ideas, new approaches, and new spirit being marshalled to master the whole range of the socio-economic problems of the North.

Political Forms.—Wherever mankind has found it economically profitable to labour, he has settled permanently; and wherever he has settled permanently he has needed political forms to organize and direct his activities. In this basic need the Canadian North is no different from other regions. Where it is different is in the problems posed by its great area and small, scattered population. The "rep by pop" cry of Canada's revolutionary days could solve no problems in the North. The same spirit of new ideas and new approaches that has been essential in meeting the economic challenge has been no less essential in meeting the political challenge.

During most of Canada's history, the Northland was a vast, unorganized territory with only a nominal form of government. Its permanent settlements were scattered trading posts and missions, and its way of life required little regulation. The real beginning of political evolution had to await the discovery and development of mineral wealth, and consequent increase in population.

This occurred in 1896 when the Klondike gold strike was made and thousands of people swarmed into the area. Two years later, an Act of Parliament made the Yukon a separate Territory and gave it a local government composed of a Commissioner and Legislative Council of six members, all appointed by the Federal Government. In 1899, the Act was amended to provide for the election of two additional members to the Legislative Council and, in 1902, a further amendment increased the size of the Council to 11 members, five of whom were elected. At the same time, the right to elect a member to the House of Commons was granted. In 1908, by further amendment, the Legislative Council became wholly elective, with ten members serving for a three-year term. Dawson was chosen as the capital.

As the amount of gold produced dwindled and population consequently decreased, the size of the Council was reduced, but it retained its fully elective character. In 1919, the Council was reduced to three members and it remained at this number until 1951. After the second world war, the Yukon again entered a period of rapid expansion, paced by the growing base-metals mining industry. Between 1941 and 1951 its population increased from 5,000 to 9,000. As a consequence, in 1951, the size of the Council was increased to five members, at which number it remains at the present time. In 1953, the seat of government was moved to Whitehorse.

In the Northwest Territories, mineral discoveries, on which economic and thus political development are based, came at a much later date than in the Yukon. After the first world war, the discovery of oil at Norman Wells caused a brief flurry of interest; in 1930, pitchblende ore, a source of radium and uranium, was discovered at Great Bear Lake; and in 1933 the Yellowknife gold field was discovered. Until these mineral finds were made, the Northwest Territories was a thinly populated area that had already passed through various elementary stages of government as the western provinces were gradually carved out of the great Canadian Northwest. It assumed approximately its present boundaries in 1905, at which time the previous territorial government was discontinued and provision was made for a Commissioner and Council of four members or fewer to administer the government. The seat of government was fixed at Ottawa. The powers of the Council remained dormant for some time, because the economy of the region was still based on the fur trade, which is capable of sustaining only a scanty human population.

The Norman Wells discovery necessitated provision for a more active administration, and the size of the Council was increased in 1921 to six and one member was designated as Deputy Commissioner. The Council was still wholly appointive. No further change was made until 1947, when a resident of Yellowknife was appointed to the Council.

As mineral development expanded, the population of the Northwest Territories increased rapidly; between 1931 and 1951, the white population rose from less than 1,000 to 5,340. To meet the changing needs and desires of the people, the system of government underwent significant changes. The Federal electoral district of Yukon which had been sending a member to the House of Commons for 45 years, was enlarged in 1947 to include part of the Mackenzie District and was re-named "Yukon-Mackenzie River". In 1952, the Redistribution Act provided for a separate member to represent Mackenzie District.

Important developments also occurred at the Territorial (analogous to provincial) and local government levels. In 1951, the Northwest Territories Act was amended to provide for elected representation on the Territorial Council. Under the amended Act, the number of Councillors was raised to eight, three of whom were elected for terms of three years. Effective in July 1954, the Council consists of nine members, five of whom are senior federal officials appointed by the Governor in Council and four of whom are residents of the Northwest Territories elected for three years to represent four electoral districts in the Mackenzie District. The Council must hold at least two meetings a year, one of which must be in the Territories. All other meetings must be held at the seat of government at Ottawa.

At the local level, important developments have also taken place. Because it was clear that the Territories would not readily fit into the usual classification of rural and urban municipality, a flexible concept known as a municipal district was evolved. Yellowknife, in 1939, was the first district created and the second was Hay River, in 1949. It is the usual practice when a district is first created to provide that a majority of the Council members be appointed by the Commissioner and a minority elected by the residents. This is still the situation at Hay River, but Yellowknife, in 1947, achieved the position where the elected members were in a majority of five to four, with the Chairman still being appointed. In 1949, the membership was reduced to eight, five elected and three appointed, with the Council electing its Chairman from its members. In 1954, the Council became fully elective and now consists of a Mayor and eight Councillors.

In summing up the economic and political background against which the development of the Canadian North will continue to unfold, it should be emphasized that only the barest start has been made in meeting the challenge of that development. Only the first, faint imprints of civilization are beginning to appear in a land that was left almost unmarked by its generations of shifting, nomadic people. As has been suggested, it is a development that will follow unprecedented courses because the frontier is being tamed by an adult country with all the force of twentieth century techniques behind it; because it is the aeroplane and not the covered wagon that penetrates the unmapped places.

Subsection 2.—Provincial Public Lands

Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the Provincial Governments. In 1930, the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan, Alberta and of sections of British Columbia to their respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949.

All land in the Province of Prince Edward Island has been alienated except 11 sq. miles under federal administration.

Information regarding provincial public lands may be obtained from the respective provinces. (*See* the Directory of Sources of Official Information, Chapter XXIX, under "Lands".)

Certain areas in most of the provinces have been set aside for parks and reserves; these are dealt with in Subsection 3.

Subsection 3.—National and Provincial Parks

The future of Canada in the field of outdoor recreation is being wisely provided for by the establishment of National and Provincial Parks. Many of these Parks are easily accessible by highway, rail or air and offer every type of accommodation from camping facilities to palatial hotels and cosy cabins. A wide variety of summer and winter recreational attractions are available in mountain, lakeland, woodland and seaside areas of exceptional scenic beauty.

The areas of the Parks are given in Table 3; location, year of establishment, area, and main characteristics of each National Park are given in Table 4 followed by a brief description of the Provincial Parks.

3.—Area of National and Provincial Parks, by Province, 1954

Province or Territory	National	Provincial	Total
	sq. miles	sq. miles	sq. miles
Newfoundland	—	48·00	48·00
Prince Edward Island	7·00	—	7·00
Nova Scotia	390·61	—	390·61
New Brunswick	79·63	—	79·63
Quebec	[1]	20,244·00	20,244·00
Ontario	11·72	5,079·17	5,090·89
Manitoba	1,148·09	2,604·00[2]	3,752·09
Saskatchewan	1,496·05	1,685·13	3,181·18
Alberta	20,718·00	116·54	20,834·54
British Columbia	1,671·00	14,087·00	15,758·00
Yukon and Northwest Territories	3,625·00	—	3,625·00
Canada	**29,147·10**	**43,863·84**	**73,010·94**

[1] Less than one square mile. [2] Three areas, though not designated as Provincial Parks, are used for recreational purposes and are therefore included here (*see* p. 37).

National Parks.—From 1885, when the first National Park was established around the mineral hot springs at Banff, Alta., until 1954, 28 areas covering more than 29,000 sq. miles have been set aside as National Parks.

These Parks are maintained by the Federal Government for the protection of their flora, fauna and natural phenomena, for the preservation of their scenic beauty and interest and, in some cases, the marking of their historical significance in the building of the nation. They are supervised by the National Parks Branch, Department of Northern Affairs and National Resources, and are developed and maintained in such a manner as to provide perpetual inspiration, education and healthful recreation for present and future generations.

The National Parks are Canada's greatest single tourist attraction. Accommodation in privately owned hotels, bungalow cabins, chalets, lodges and cottages is available, and modern cabins have been built in several of the Parks by the National Parks Administration to afford low-rental accommodation to Park visitors. Recreational facilities include heated outdoor swimming pools with dressing-room buildings; equipped camp-grounds, some with trailer-park facilities; golf courses in superb scenic settings; tennis courts; bowling greens; well-equipped children's playgrounds; athletic fields; horseshoe pitches; outdoor checker-boards; and, in some of the Parks, amphitheatres where plays, concerts and film shows are held in the open. For winter sports there are down-hill and slalom ski courses, ski jumps, ski tows and a chairlift.

A Park warden service protects the forests and wildlife and maintains constant vigilance for the safety and comfort of visitors. Stocking and transfer of game fish are carried out extensively and successfully in order to improve angling opportunities in Park waters; fish hatcheries are operated in three of the mountain National Parks. (A special article on 'Game Fish in Canada's National Parks' is given in the 1952-53 Year Book, pp. 34-36.) Two of the National Parks are largely big-game preserves where herds of buffalo and other animals find sanctuary.

In addition to the scenic, recreational and wild animal parks, Canada has eleven national historic parks. The National Parks and Historic Sites Service of the Department of Northern Affairs and National Resources is also responsible for the marking, preservation and restoration of places of great historic interest in Canada. More than 450 such sites have been marked on the recommendation of the Historic Sites and Monuments Board of Canada.

4.—Location, Year Established, Area and Characteristics of National Parks

Park	Location	Year Established	Area	Characteristics
			sq. miles	
Scenic and Recreational Parks				
Banff	Western Alberta, on east slope of Rockies.	1885	2,564·0	Magnificent scenic recreational area; noted resorts, Banff and Lake Louise. Mineral hot springs; summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Yoho	Eastern British Columbia, on west slope of Rockies.	1886	507·0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Glacier	Southeastern British Columbia, on summit of the Selkirk Range.	1886	521·0	Superb alpine region, towering peaks, glaciers and forests. Accessible by rail only. Climbing, skiing, camping.
Waterton Lakes	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	204·0	Canadian section, Waterton-Glacier International Peace Park. Mountain playground with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.

4.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Established	Area	Characteristics
			sq. miles	
Scenic and Recreational Parks—concl.				
Jasper	Western Alberta, on east slope of Rockies.	1907	4,200·0	Mountain playground and noted wildlife sanctuary. Majestic peaks, ice-fields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Mount Revelstoke	Southeastern British Columbia, on west slope of Selkirks.	1914	100·0	Rolling mountain-top plateau. Colourful alpine meadows. Accessible by rail and highway. Summer accommodation in Park; all-year accommodation in town of Revelstoke. Championship ski runs and ski jump. Equipped camp-grounds.
St. Lawrence Islands	In St. Lawrence River between Morrisburg and Kingston, Ont.	1914	189·4 (acres)	Mainland area and 13 islands among Thousand Islands. Recreational and camping area. Accessible by highway: by boat from nearby mainland points.
Point Pelee	Southern Ontario, on Lake Erie.	1918	6·0	Recreational area. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Kootenay	Southeastern British Columbia, on west slope of Rockies.	1920	543·0	Encloses Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Prince Albert	Central Saskatchewan, north of Prince Albert.	1927	1,496·0	Forested region dotted with lakes and interlaced with streams. Summer playground and recreational area. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Riding Mountain	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148·0	Playground and wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Georgian Bay Islands	In Georgian Bay, north of Midland, Ont.	1929	5·4	Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Equipped camp-grounds and annual youth camps on Beausoleil Island.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	390·0	Rugged Atlantic coast line with mountain background. Fine seascapes. Recreational opportunities. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Prince Edward Island	North shore of Prince Edward Island.	1937	7·0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp-grounds.
Fundy	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79·5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Bungalow cabin accommodation. Equipped camp-grounds.

4.—Location, Year Established, Area and Characteristics of National Parks—concluded

Park	Location	Year Established	Area	Characteristics
Wild Animal Parks			sq. miles	
Elk Island	Central Alberta, near Edmonton.	1913	75·0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular recreational area. Accessible by highway. Bungalow cabin accommodation and equipped camp-grounds.
Wood Buffalo[1]	Partly in Alberta and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300·0	Immense region of forests and open plains. Home of largest remaining herd of bison on the Continent. Other wildlife abundant.
Historic Parks			acres	
Fort Anne	Nova Scotia, at Annapolis Royal.	1917	31·0	Site of early Acadian settlement. Museum and well-preserved earthworks.
Fort Beauséjour	New Brunswick, near Sackville.	1926	81·3	Site of French fort erected in middle of 18th century. Museum.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1941	339·5	Ruins of walled city erected by the French, 1720-40. Interesting excavations. Museum.
Port Royal	Port Royal, N.S., 8 miles from Annapolis Royal.	1941	20·5	Restoration of "Habitation" or first fort built in 1605 by Champlain, DeMonts and Poutrincourt.
Fort Chambly	Chambly, Que.	1941	2·5	French fort on Richelieu River, first built in 1665. Museum.
Fort Lennox	Ile-aux-Noix, Que., near St. Johns.	1941	210·0	Site of early French fort built in 1759.
Fort Wellington	Prescott, Ont.	1941	8·5	Defence post built 1812-13. Museum.
Fort Malden	Amherstburg, Ont.	1941	5·0	Site of defence post built 1797-99. Museums.
Fort Prince of Wales	Northern Manitoba, near Churchill.	1941	50·0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry	Manitoba, 20 miles north of Winnipeg.	1951	12·8	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford	Saskatchewan, 4 miles south of North Battleford.	1951	36·7	North West Mounted Police post built in 1876.

---

[1] Administered by the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources.

Provincial Parks.—In addition to the National Parks described above, most of the provinces have established Provincial Parks. These Parks, as in the case of the National Parks, are areas of great scenic or other interest maintained for the benefit of the public. The Provincial Parks are administered by the provincial governments concerned and, in most cases, have not yet reached the degree of development that marks the National Parks.

A detailed list of the Provincial Parks, showing location, year established, area and a short description in each case, is given in the 1954 Canada Year Book, pp. 26-30. The more important Parks in each province are mentioned briefly in the following outline.

Newfoundland.—Provincial park area in Newfoundland was increased recently from 42 sq. miles to 48 sq. miles. In addition to the 42 sq. miles on the west coast of the Province, which was set aside as Serpentine Park and is still undeveloped, six square miles on the Upper Humber River will be developed in the near future as a Provincial Park.

Quebec.—The Province of Quebec has established five Provincial Parks and four fish and game reserves. Four of the Parks areas are quite extensive in size. La Vérendrye Park, 140 miles northwest of Montreal, covers an area of 4,747 sq. miles; Laurentides Park, 25 miles north of Quebec City is 3,613 sq. miles in area; Trembling Mountain, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, Gaspe Peninsula, 514 sq. miles. Mount Orford Park, situated 15 miles west of Sherbrooke, is 16 sq. miles in extent. The fish and game reserves together cover an area of more than 10,000 sq. miles. These Parks and reserves are wilderness areas of great scenic interest, for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mount Orford, excellent fishing may be found and the Parks are organized to accommodate sportsmen and tourists in camps, cottages and lodges. Trembling Mountain is a famous resort area, in both summer and winter, and is easily reached by highway the year round from Montreal. The Department of Game and Fisheries administers the Parks and reserves as well as four salmon streams which are open to anglers.

Ontario.—There are six Provincial Parks in Ontario administered by the Department of Lands and Forests, all of which are Crown game preserves. Three of these Parks—Algonquin, 105 miles west of Ottawa (2,750 sq. miles), Rondeau, 70 miles east of Windsor (8 sq. miles), and Ipperwash, 50 miles north of Chatham (109 acres)—are easily reached by car and contain facilities for camping, picnicking, swimming, dancing, fishing, hiking and boating. Boys', girls' and adults' commercial camps are established in Algonquin Park. Quetico Park, in the Rainy River district of northwestern Ontario (1,720 sq. miles) and Sibley Park, on the north shore of Lake Superior (63 sq. miles), are accessible by car but are not developed. Superior Park, about 70 miles north of Sault Ste. Marie (540 sq. miles), may be reached by boat or rail and is undeveloped.

Manitoba.—Three areas in the Province may be considered as Provincial Parks, although they are not set up as such. Whiteshell Forest Reserve (1,088 sq. miles) and Cormorant Forest Reserve (580 sq. miles) are used as recreational areas. Another area known as the Northern Recreational Area (936 sq. miles) has not as yet been designated by Order in Council as either a forest reserve or a provincial park, but it also is used as a recreational area and has been included in the total of 2,604 sq. miles designated as provincial park area in Manitoba.

Saskatchewan.—Saskatchewan has ten Provincial Parks having a total area exceeding 1,000,000 acres. Cypress Hills, Duck Mountain, Greenwater Lake, Moose Mountain, Little Manitou and Valley Centre are operated as summer resorts with chalet, lodge, cabin and trailer accommodation, and camping and picnic facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, horseback riding, etc., and the Parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer and beaver are plentiful and brook and other trout abound in the streams and lakes. Heavy stands of tall, straight lodgepole pine provide forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common as well as several varieties of grouse. Heavy stands of spruce, poplar and white birch provide excellent cover for wildlife and pickerel, pike and perch are prevalent in the lakes.

Alberta.—In Alberta, 28 Provincial Parks have been established by proclamation or Order in Council but only 20 of them are being developed at the present time. Cypress Hills Park, an area of over 77 sq. miles situated in the southern part of the Province near the Saskatchewan border, is the largest of these Parks. The others include Aspen Beach, Beauvais Lake, Crimson Lake, Dillberry Lake, Pembina River, Gooseberry Lake, Kinbrook Island, Ma-Me-O Beach, Park Lake, Red Lodge, Rochon Sands, Saskatoon Island, Sylvan Lake, Taber, Little Bow, Woolford, Writing-on-Stone, Garner Lake and Vermilion. Picnic shelters, playground equipment and camp stoves are provided in these Parks which are maintained primarily for the recreation and enjoyment of residents of the Province.

British Columbia.—There are 66 Provincial Parks in British Columbia, covering an area of about 14,087 sq. miles. These Parks are classified as Class A, B, C and Special Parks. Class A Parks are those considered most highly for immediate recreational development and are strongly protected. Class B Parks are areas slated for development, valuable wilderness areas or places set aside for a specific reason. Class C Parks are intended primarily for the use of local residents and are generally managed by a Board. Special Parks, of which only one remains, were created in the past by Special Acts of the Legislature. The Parks are in all stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir and Wells Gray Parks, and outstanding scenic and mountain places, which include Garibaldi, Mount Robson and E. C. Manning Parks. Thousands of city dwellers throng to the ski slopes of Mount Seymour or picnic at Cultus Lake Park. The formal gardens of Peace Arch are a monument to the goodwill between two nations. Vancouver Island has a chain of small forest parks that have achieved a tremendous popularity with tourists, the best known of which are Little Qualicum Falls and Miracle Beach. In addition to the Parks, the roadside camp-site system consists of 49 areas covering about 4·4 sq. miles.

Subsection 4.—The National Capital Plan*

The Master Plan to guide the long-range development of Ottawa and environs and to create a Capital in keeping with Canada's acheivements and status as a nation is now well launched and evidences of its progress are apparent in many sections of the Capital area.

Preparation of the Plan was begun in 1945 and a preliminary report was completed in 1948. The Final Report was forwarded to the Government by the National Capital Planning Committee and the Federal District Commission† and tabled in the House of Commons on May 22, 1951. Details of the Plan are given in the 1950 Year Book, pp. 18-20, and progress made is outlined in subsequent editions.

Since the inception of the National Capital Plan, the Commission, on the advice of the National Capital Planning Committee, has approved plans of various Federal Government departments for 12 major site developments and 100 buildings.

---

* Revised by the Federal District Commission, Ottawa.

† The Commission is the federal agency responsible for the implementation of the Plan. *See* also p. 103.

Several of the new buildings have been completed and occupied, including the head office for Central Mortgage and Housing Corporation on the Montreal Road and the Dominion Bureau of Statistics at Tunney's Pasture. Others nearing completion are the Department of Veterans Affairs building on Wellington Street and the Government Printing Bureau at Hull. Approval has been given for the construction of a National Library of Canada building on the high ground overlooking the Ottawa River, west of the Supreme Court. The site is at present partly occupied by No. 1 Temporary Building, which is to be removed. The Library of Parliament, which was damaged by fire in 1953, was restored in 1954.

Work continued on a variety of other buildings and projects throughout the Capital area. Among these is an overpass on the Montreal Road designed and built by the Commission to provide a controlled entrance to the National Research Council establishment. Removal of the Aylmer Building permitted completion of the western approach to the Mackenzie King Bridge. The bridge, which was the first completed project in the National Capital Plan, opens up an east-west traffic artery over the Rideau Canal in Confederation Park. Work was also begun by the Commission on the development of the Hog's Back-Mooney's Bay Park. When completed this area will provide a very attractive 50-acre addition to the Commission's park system in the National Capital.

An important project during 1954 was the rebuilding of Sussex Street, a main artery on which are located several national institutions including the Public Archives, the Royal Canadian Mint, headquarters of the National Research Council, the Prime Minister's official residence and Rideau Hall, the residence of the Governor General. The project included the rebuilding of the Sussex Street bridges over the Rideau River at Rideau Falls. Street-car tracks were removed (motor-buses are now used on the route) and overhead wiring was placed underground. The project was carried out jointly by the City of Ottawa and the Federal District Commission.

Notable progress was made on the installation of new railway facilities in accordance with long-range plans to remove trackage from central Ottawa and Hull to the urban outskirts and subsequently to use the rights-of-way thus released for arterial roads. Land was acquired along the new rail belt for the construction of railway yards and for the relocation of industries requiring rail services. Since November 1953, CNR manifest freight trains from Montreal en route to Western Canada have been using the new belt line and yards, thus by-passing the central area of the Capital. The signal system has been installed in the new yards and as soon as other installations are completed the CNR will transfer its operations from the tracks and yards that bisect the Capital along Catherine Street. The FDC completed the acquisition of extra land to widen and link up this crosstown right-of-way to permit construction of an east-west traffic artery, averaging 200 feet wide, which will join with Highway 17 east and west of Ottawa. Seven miles of trackage has been lifted preparatory to construction of the western end of the new traffic artery. Plans were made by the City, with the co-operation of the FDC, to construct a new bridge at Hurdman's where the new east-west artery will cross the Rideau River.

The Commission continued its policy of using part of the National Capital Fund, into which are paid annual parliamentary grants of $2,500,000, to share in the costs of extending municipal water and sewage services in conformity with the Master Plan. Progress also continued on the acquisition of land for the new eastern and western parkways, which will run in a broad arc south from the vicinity of Rockcliffe Airport, cross the Rideau River near Hog's Back, and continue west and north to the Ottawa River near Britannia.

Construction of what will eventually be a 50-mile scenic driveway through Gatineau Park was begun, and the first two miles of the parkway from the Aylmer Road at Val Tetreau to the Mountain Road were completed and hard-surfaced. Construction was also begun on a new parkway to be known as Fairy Lake Parkway which will run from the Aylmer Road at the western section of Hull and skirt Fairy Lake to the east. Plans were also made for the extension of the parkway system along the Ottawa shore, east and west of the waterfront approach to the Champlain bridges.

Gatineau Park.—The development of Gatineau Park, located in the wooded hill-and-lake country of the Laurentians north of the City of Hull and about eight miles from the Capital, was begun by the FDC in 1937. It is the summer and winter playground of the National Capital, and is well provided with hiking trails and picnic and camping spots. Swimming, boating and fishing are enjoyed in the Park's many lakes and, in the winter, it is the skiing centre of the district.

Kingsmere, the country estate bequeathed to the nation by the Rt. Hon. William Lyon Mackenzie King and placed in the care of the Commission, is located on Kingsmere Lake at the south end of the Park. Land acquisitions by the Commission have increased the area of the Park to about 45,000 acres, and plans call for its ultimate development to about 80,000 acres.

Section 3.—Wildlife Resources and Conservation*

The Canadian Wildlife Service.—The Canadian Wildlife Service of the National Parks Branch, Department of Northern Affairs and National Resources, is responsible for attending to wildlife matters coming within the jurisdiction of the Federal Government, except those within the purview of the National Museum and certain activities closely related to Indian affairs.

Its functions include acting in an advisory capacity with regard to conservation and management of wildlife in the Northwest Territories; advising and co-operating with the National Parks and Historic Sites Division regarding fish and wildlife problems in the National Parks; and administration of the Migratory Birds Convention Act, in conjunction with the Royal Canadian Mounted Police and in co-operation with the provincial game authorities. The Canadian Wildlife Service also handles national and international problems relating to Canada's wildlife resources and co-operates with governmental and other agencies having similar interests and problems in Canada and elsewhere.

The Service issues permits for bird-banding in Canada and is the Canadian clearing-house for bird-banding information. It issues permits to qualified persons to take migratory birds for scientific purposes; to take and possess migratory birds for propagating purposes; to collect eiderdown; and to engage in the business of taxidermy.

---

* Prepared by the Canadian Wildlife Service, Department of Northern Affairs and National Resources, Ottawa.

The Canadian Wildlife Service plans and carries out scientific investigations concerning numbers, food, shelter, migration, reproduction, diseases, parasites, predators, competitors and uses of wild creatures in Canada. In certain of such investigations, e.g., the mid-winter waterfowl inventory, it works in close co-operation with United States authorities conducting parallel studies.

The Service is responsible for the establishment and administration of bird sanctuaries under the Migratory Birds Convention Act. On Dec. 31, 1953, there were 90 bird sanctuaries with a total area of more than 1,800 sq. miles.

The Limnology Section of the Service concerns itself with the maintenance and improvement of sport fishing, the control of aquatic and semi-aquatic insects, the control of algæ, and other biological problems that arise in regard to water areas in the National Parks. It also acts in an advisory capacity to the Northern Administration and Lands Branch in connection with aquatic biological matters.

A series of special articles relating to the wildlife resources of Canada are being carried in the Year Book. Articles on 'Migratory Bird Protection in Canada', 'Game Fish in Canada's National Parks,' and 'The Barren-Ground Caribou' were carried in the 1951, 1952-53 and 1954 editions, respectively. The following article on 'Migratory Bird Legislation' describes the measures taken by Canada to fulfil its obligations under the Migratory Birds Treaty.

MIGRATORY BIRD LEGISLATION

Migratory birds are protected in Canada under the terms of the Migratory Birds Treaty, signed at Washington on Aug. 16, 1916, and put into effect by parallel legislation in Canada and in the United States. The Treaty does not, however, apply to all birds migrating between the two countries, but only to those classified in three main groups as follows:—

(1) **Migratory Game Birds.**—*Anatidæ* or waterfowl, including brant, wild ducks, geese and swans; *gruidæ* or cranes, including little brown, sandhill and whooping cranes; *rallidæ* or rails, including coots, gallinules and sora and other rails; *limicolæ* or shorebirds, including avocets, curlew, dowitchers, godwits, knots, oyster catchers, phalaropes, plovers, sandpipers, snipe, stilts, surf birds, turnstones, willet, woodcock and yellowlegs; and *columbidæ* or pigeons, including doves and wild pigeons.

(2) **Migratory Insectivorous Birds.**—Bobolinks, catbirds, chickadees, cuckoos, flickers, flycatchers, grosbeaks, humming birds, kinglets, martins, meadowlarks, nighthawks or bull bats, nuthatches, orioles, robins, shrikes, swallows, swifts, tanagers, titmice, thrushes, vireos, warblers, waxwings, whippoorwills, woodpeckers, wrens, and all other perching birds that feed entirely or chiefly on insects.

(3) **Migratory Non-game Birds.**—Auks, auklets, bitterns, fulmars, gannets, grebes, guillemots, gulls, herons, jaegers, loons, murres, petrels, puffins, shearwaters and terns.

Under the Treaty, no open season may be declared for the hunting of migratory insectivorous birds or migratory non-game birds. Open seasons for migratory game birds may be provided by the Canadian and United States Governments, but no such open seasons may begin before Sept. 1 in any year or may last beyond Mar. 10, or may be more than three and one-half months in length. In practice, opening dates for the various species and districts are generally later than Sept. 1, except in northern Canada, and only in limited areas and for particular species do any seasons extend beyond the end of January.

Many of the migratory game birds have enjoyed a continuous close season throughout Canada and the United States since the provisions of the Treaty came into effect, and have indeed ceased to be generally considered as game birds. Other species were never very popular for food or sport and, although open seasons may be provided for them, they are taken by comparatively few hunters.

The most important game birds in Canada are certain species of geese (including brant) and ducks. Swans and cranes enjoy virtually permanent protection, no open season on them having been declared since the Treaty came into effect. Open seasons for woodcock and Wilson's snipe are provided, although not in all provinces, but there have been no open seasons for other species of shore-birds since 1927. Most provinces have open seasons on some or all species in the rail group. In British Columbia there is an annual open season on band-tailed pigeons, but elsewhere in Canada it is not customary to hunt pigeons or doves and there is no open season for them.

In view of the importance of ducks and geese, special surveys of these birds are made by the wildlife authorities of Canada and the United States, working in close collaboration. A count is made at midwinter, when waterfowl are concentrated chiefly in the United States, with relatively small numbers on the eastern and western coasts of Canada and a few stragglers in the central provinces. This count, taken at a time when hunting of waterfowl has almost or quite ceased throughout the two countries, makes possible a fairly close estimate of the breeding population available for the following spring.

The coming of spring is the signal for the majority of North American waterfowl to forsake their winter resorts in favour of breeding-grounds farther north or at a higher altitude. A large proportion of the duck population selects the sloughs, marshes and lake-shores of the Prairie Provinces as their favoured nesting area. Trumpeter swans prefer to winter in British Columbia and to rear their young on the high prairies of Alberta and in some other remote areas, the locations of which are still in doubt. The little Ross's goose, a more ambitious bird, winters in California and nests near the mouth of the Perry River, north of the Arctic Circle. In fact, almost every district in Canada where suitable nesting territory is available receives its quota of one or more species of waterfowl during the breeding season.

Weather conditions during the spring and summer are of great importance to the stock of North American waterfowl. A cold, wet spring has serious adverse effects on the early attempts at nesting. Also an unusually hot and dry summer, drying up ponds and marshes before the young ducks are ready to fly, may wipe out thousands of fledglings over wide areas. Epidemic diseases, predation, prairie and forest fires, and farming operations also present hazards to both parents and young.

To obtain an adequate comprehension of the waterfowl situation as it develops between the midwinter census and the following hunting season, wildlife experts maintain a constant watch on the chief breeding areas in spring and summer. A series of extensive surveys is made by officers of the Canadian Wildlife Service, the United States Fish and Wildlife Service, provincial game departments, and other organizations. Sample counts of waterfowl on definite areas are taken, which are compared with similar counts for the same areas in preceding years. Conditions affecting nesting success, such as snow, rain, drought, spring run-off, water levels, temperature fluctuations, predation and disease, are carefully noted. Consequently, as the summer advances, wildlife authorities are able to form a well-founded estimate of continental waterfowl conditions, and to tell with reasonable accuracy how the autumn crop of waterfowl in different areas will compare with that of recent years. Thus the surveys provide a sound scientific basis for the waterfowl hunting regulations for the year.

It may be of advantage here to distinguish clearly between the Migratory Birds Treaty, the Migratory Birds Convention Act, and the Migratory Bird Regulations.

The Migratory Birds Treaty is an international treaty between Canada and the United States which defines the groups of birds affected by it, stipulates certain limitations on open seasons and on the taking and shipment of migratory birds, and provides for the issuing of special permits for scientific and propagating purposes and for the control of birds damaging crops and other interests. The terms of the Treaty are binding on both Canada and the United States and may be altered only by a new treaty.

The Migratory Birds Convention Act is a law passed by the Parliament of Canada, setting forth the measures by which Canada fulfils her obligations under the Migratory Birds Treaty. It may be amended by the Parliament of Canada, but any amendment must be in conformity with the terms of the Treaty. The Act provides for the making, by Order in Council, of regulations for the protection of migratory birds; it also makes provision for enforcement of the Act itself and of such regulations, with penalties for violations.

The Migratory Bird Regulations, authorized by the Act, govern the details of migratory bird protection, including open seasons for migratory game birds, restrictions on hunting methods and appliances, and regulations for the issue and use of permits.

In general, wildlife legislation in Canada is a purely provincial matter. The special federal interest in migratory bird legislation is derived from Sect. 132 of the British North America Act, which provides that the Government of Canada shall have all powers required to carry out obligations imposed by an external treaty on Canada or on any of its provinces. Consequently, while the provinces retain property in migratory birds within their borders, the adoption of laws to carry out the terms of the Migratory Birds Treaty is a federal responsibility. The provinces are not precluded from passing game laws which cover migratory birds, but such provincial laws, in so far as they apply to migratory birds, must be not less restrictive than federal laws on the same subject.

There is no difficulty in the practical application of the division of federal and provincial powers. Several provinces incorporate in their game laws the provisions of the federal migratory bird legislation. The game and fishery officers of all ten provinces are *ex officio* game officers under the Migratory Birds Convention Act, and enforce that Act and Regulations thereunder as well as the game and fishery laws of their own provinces.

The annual revision of the Migratory Bird Regulations is one of the important functions of the Canadian Wildlife Service. The main basis of this work is the knowledge of the continental waterfowl situation derived from the midwinter count and the summer surveys. Some items for revision may be under consideration for several months but the peak of the work is attained during June and July. As a rule, the revision is completed and the new Regulations are approved by Order in Council in July or early August, permitting announcement some weeks before the opening of the earliest waterfowl-hunting season in Canada.

In revising the Regulations, the Canadian Wildlife Service works in closest co-operation with game authorities of the provinces and territories. An annual conference of representatives of provincial and federal wildlife services is held at Ottawa, usually in June, by which time preliminary reports of the waterfowl situation are available. At this conference, free discussion of wildlife matters leads to agreement on many questions affecting the Regulations, or clarifies problems for future study. The conference does not frame amendments to the Regulations, but often passes resolutions on which amendments may be based.

By the month of July, a sufficient number of reports have been received from all parts of Canada to permit a comprehensive view of the waterfowl situation. The Canadian Wildlife Service is the focal point for receipt and analysis of this information and, because of the fact that provincial and federal wildlife services are agreed on the basic principles of conservation and co-operate in a spirit of mutual confidence, there is no undue delay in working out the necessary revisions to the Regulations. The recommendations of the individual provinces regarding dates of open seasons and bag and possession limits form the basis of corresponding provisions applying within their respective borders. The Regulations as a whole are concurred in by all the provinces and by federal legal authorities before being submitted to the Governor General in Council for approval.

It is customary for the Regulations to contain a provision that they shall come into effect on the first day of September of the year in which they are adopted; thus each year's Regulations have the force of law from Sept. 1 until Aug. 31 of the following year. The annual effective date, Sept. 1, should not be confused with the date of adoption by Order in Council (which is generally some weeks earlier, in order that the Regulations may be thoroughly publicized before they come into effect) or the dates of beginning of open seasons, which vary considerably across Canada.

As soon as the Regulations are adopted by Order in Council they are given immediate publicity throughout Canada by press and radio. Posters and abstracts are issued by the Canadian Wildlife Service and the provinces. The revised Regulations are published in the *Canada Gazette*. A consolidation of the Migratory Birds Convention Act and the Regulations is printed as soon as possible after the latter are adopted, and is distributed by the Canadian Wildlife Service to all persons and organizations interested.

PART III.—CLIMATE AND TIME ZONES

Section 1.—Climate

A comprehensive discussion of the climatic regions of Canada is available in the 1948-49 Year Book, pp. 41-62, and detailed tabulations of climatic factors covering 36 meteorological stations located mostly at well-known or populous centres are given in the 1950 Year Book, pp. 35-70. Other articles appearing in previous editions are listed under "Climate and Meteorology" in Chapter XXIX of this volume.

Table **1** gives long-term temperature and precipitation data for 35 representative Canadian stations; Tables **2** and **3** provide monthly temperature and precipitation data during 1953 for these same stations. These are mostly well-known or populous places with climates fairly representative of a considerable area. The figures given under "Temperatures" are, of course, averages obtained over the period of observation in each case. Under "Precipitation", in calculating the annual total, inches of rain is considered the total depth of water accumulated on a hypothetical horizontal impervious surface without evaporation. Similarly, the depth of snow given is that which falls on a horizontal surface, without settling, melting or sublimation. Because the depth of water obtained from melting newly fallen snow is roughly one-tenth of the depth of the snow, the total precipitation is obtained by adding together the total rainfall and one-tenth of the depth of the newly fallen snow. A day with rain is, for the purpose of these tables, one on which 1/100 of an inch or more falls and a day with snow is one with at least 1/10 of an inch of newly fallen snow. Whenever the temperature four feet above the ground falls to 32°F. or lower, the day is counted as a day with frost. The average date of the last spring frost and of the first frost in autumn marks the approximate period continuously free from frost.

1.—Long-Term Temperature and Precipitation Data for 35 Representative Stations

---

[1] Day-degrees represent the difference in temperature between the mean temperature of the air and the temperature of 65°F. multiplied by the number of days during which the outside temperature was lower than that figure, computed for the period Sept. 1 to May 31. Fuel consumption for heating purposes will be proportional to these totals.

Section 2.—Standard Time and Time Zones

Standard time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° longitude apart. Standard time is Greenwich time, all other time zones being a definite number of hours either in advance of or behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich mean time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience, but, in general, the legal boundaries of the different time zones are actually in use. The boundaries of the time zones in Canada are shown on the following map.

Daylight Saving Time.—For some years before World War I there was active propaganda, particularly in the cities, for the use of an earlier time, usually referred to as 'daylight saving time', one hour ahead of standard time, during the summer months. It was considered, from the economic as well as from the health point of view, that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918, but the Canadian Act lapsed at the end of that year. Since that date, however, various towns and cities have adopted daylight-saving by-laws for varying periods in the summer months.

Legal Authority for the Time Zones.—Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. The exceptions include: the Daylight Saving Act of 1918; an Order in Council (P.C. 4994) issued in 1940 requiring the continuation, for an additional period, of daylight saving time in a number of places in Ontario and Quebec where it had already been in force for the summer; and an Order in Council in 1942 (P.C. 547) making daylight saving time nation-wide, and later revoked by Order in Council (P.C. 6102), ending the observance on Sept. 30, 1945. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for game, and times of opening and closing business houses and places of amusement.

PART IV.—ASTROPHYSICS

The science of astrophysics is carried on by three Canadian institutions: the Dominion Observatory, Ottawa, Ont., the Dominion Astrophysical Observatory, Victoria, B.C. (both operated by the Department of Mines and Technical Surveys), and the David Dunlap Observatory, associated with the University of Toronto. Of the two Government institutions, the Dominion Observatory at Ottawa has specialized mainly in the astronomy of position in solar physics and in various branches of geophysical work, and the major effort in astrophysics has been concentrated at the Dominion Astrophysical Observatory at Victoria, B.C. The David Dunlap Observatory was founded in 1935 and is equipped with very fine astrophysical equipment of a kind similar to that in use at Victoria. It performs not only the function of a privately financed and administered research institution but is also the nucleus of a university department of astronomy. A special article dealing with the work of the Dominion Astrophysical Observatory at Victoria, B.C., appears in the 1948-49 Year Book, pp. 63-71.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state was established by the British North America Act, 1867, which united the three British North American provinces of Canada, New Brunswick and Nova Scotia into one country, divided into four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia. British Columbia entered the Union in 1871 and Prince Edward Island in 1873. The Province of Manitoba was created in 1870, and the Provinces of Saskatchewan and Alberta in 1905, out of portions of the territories formerly held by the Hudson's Bay Company and admitted to the Union in 1870. Newfoundland entered the Union in 1949. At the present time, therefore, Canada consists of ten provinces and the remaining territories known as the Yukon Territory and the Northwest Territories.

The British North America Act of 1867 divided legislative and executive authority between Canada on the one hand and the provinces on the other. Judicial authority was not similarly divided, provincial and federal courts having jurisdiction with respect to both federal and provincial laws.

While the British North America Act of 1867 together with its subsequent amendments is popularly regarded as the Constitution of Canada, it is not an exhaustive statement of the laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other statutes of the United Kingdom Parliament (e.g., the Statute of Westminster, 1931), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the demise of the Crown, the Governor General, the Senate, the House of Commons,

[1] The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

[2] Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished Mar. 1, 1927, in consequence of the Award of the Judicial Committee of the British Privy Council, whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

[3] Extended by the Extension of Boundaries Act of Manitoba, 1881, and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

[4] Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional Districts of Assiniboia, Athabasca, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian Privy Council, concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

[5] By an Imperial Order in Council passed on June 23, 1870, pursuant to the Rupert's Land Act, 1868 (31-32 Vict., c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada, effective July 15, 1870. These territories were designated as the North-West Territories by the Act of 32-33 Vict., c. 3, and as the Northwest Territories by R.S.C. 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada, and these additional territories were formally included in the North-West Territories by 4-5 Edw. VII, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (33 Vict., c. 3), and a further portion was added to Manitoba in 1881 by 44 Vict., c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905, and in 1912 other portions were added to Manitoba, Ontario and Quebec.

[6] By 39 Vict., c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed, and in 1905 the entire Keewatin District was re-annexed. The Act of 39 Vict. was never proclaimed. By Order in Council of May 8, 1882, the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabasca were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895, the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council, dated Mar. 16, 1918 (effective Jan. 1, 1920), the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

[7] The provisional district of Yukon, established in 1895, was created a judicial district of the North-West Territories by proclamation issued pursuant to Sec. 51 of the North-West Territories Act (R.S.C. 1886, c. 50) on Aug. 16, 1897, and by the Yukon Territory Act (61 Vict., c. 6) was declared to be a separate territory.

electoral districts, elections, Royal Style and Titles, and also statutes of provincial legislatures relating to provincial government and provincial legislative assemblies. Other written instruments, such as the Royal Proclamation of 1763, early instructions to Governors, letters patent creating the offices of Governors and Governors General, and Orders in Council passed pursuant to the British North America Act, also form part of the Canadian constitutional system. In addition, the Constitution of Canada includes well-established usages and conventions. The preamble to the British North America Act states that it was the desire of the original provinces to be united "with a constitution similar in principle to that of the United Kingdom" and accordingly many of the usages and conventions of government that have been developed in the United Kingdom over the centuries are followed in Canada. For example, the Cabinet system of responsible government as developed in the United Kingdom obtains in Canada although no mention thereof is made in the British North America Act.

No provision was made in the British North America Act, 1867, for amendment thereof by any legislative authority in Canada, but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws, and the privileges and immunities of members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged, and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or French language, and the duration of the House of Commons.

Canada's Status in the Commonwealth of Nations.*—The several stages in the development of the status of Canada have been authoritatively described in the reports of successive Imperial Conferences, including that held at London in 1926 which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed, as a complementary aspect of nationhood, the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations and, more recently, in the United Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931, which provided for the removal of the remaining limitations on the legislative autonomy of the Commonwealth nations.

---

* Dealt with in greater detail in the 1952-53 Year Book, pp. 101-104.

Thus Canada, under the Crown, has equality of status with the United Kingdom and the other Commonwealth nations in both domestic and foreign affairs; its government advises the Crown in the person of the Governor General on all matters relating to Canada. Canada has membership in the United Nations; makes its own treaties; appoints its own ambassadors and other representatives abroad; levies its own taxes; makes its own laws which are executed by a government dependent on the will of a majority of the people; and maintains its own military, naval and air forces. In short, Canada has achieved the full status of democratic nationhood within the Commonwealth of Nations.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act provides that "the Executive Government and authority of and over Canada is . . . vested in the Queen". The functions of the Crown, which are substantially the same as those of the Queen in relation to the Government of the United Kingdom, are discharged by the Governor General in accordance with established principles of responsible government. The practical executive functions of government are exercised by the Cabinet.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953, the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position and, in December 1952, it was decided by the Prime Ministers of the Commonwealth countries meeting at London to establish new forms of title for each country. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:—

> "Elizabeth the Second, by the grace of God of the United Kingdom, Canada and her other realms and territories Queen, Head of the Commonwealth, Defender of the Faith".

The Governor General.—The Governor General, appointed by the Queen on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada, under the Letters Patent constituting the Office of Governor General and the provisions of the British North America Acts, 1867 to 1952. Acting under the recommendations of his responsible advisers, he summons, prorogues and dissolves Parliament and assents to Bills and exercises other executive functions.

2.—Governors General of Canada since Confederation

Name	Date of Appointment	Date of Assumption of Office
Viscount Monck, G.C.M.G.	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.	Oct. 5, 1878	Nov. 25, 1878
The Marquis of Lansdowne, G.C.M.G.	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.	July 30, 1898	Nov. 12, 1898
Earl Grey, G.C.M.G.	Sept. 26, 1904	Dec. 10, 1904
Field Marshal H.R.H. The Duke of Connaught, K.G.	Mar. 21, 1911	Oct. 13, 1911
The Duke of Devonshire, K.G., G.C.M.G., G.C.V.O.	Aug. 19, 1916	Nov. 11, 1916
General The Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Ratton, G.C.S.I., G.C.I.E., G.B.E.	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough, G.C.M.G.	Feb. 9, 1931	Apr. 4, 1931
Lord Tweedsmuir of Elsfield, G.C.M.G., G.C.V.O., C.H.	Aug. 10, 1935	Nov. 2, 1935
Major-General The Earl of Athlone, K.G., P.C., G.C.B., G.C.M.G., G.C.V.O., D.S.O.	Apr. 3, 1940	June 21, 1940
Field Marshal Viscount Alexander of Tunis, K.G., G.C.B., G.C.M.G., C.S.I., D.S.O., M.C., A.D.C.	Aug. 1, 1945	Apr. 12, 1946
The Right Honourable Vincent Massey, C.H.	Jan. 24, 1952	Feb. 28, 1952

The Cabinet.—The Cabinet is a committee of the Queen's Privy Council for Canada and is responsible to Parliament. By convention, the members of the Cabinet are members of either the House of Commons or the Senate. Normally, most of the Cabinet members have seats in the House of Commons; at July 15, 1954, the Leader of the Government in the Senate (who was also Solicitor General) and the newly appointed Transport Minister were the only members not in the House of Commons.

The Cabinet initiates nearly all public Bills placed before Parliament and, following established precedent, resigns office when it becomes evident that it no longer holds the confidence of the representatives of the people. Its members are chosen by the Prime Minister and each generally assumes charge of one of the various departments of government, although a Minister may hold more than one portfolio at the same time, or may be without portfolio.

3.—Prime Ministers since Confederation

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir John Alexander Macdonald	July 1, 1867 – Nov. 5, 1873
2	Hon. Alexander Mackenzie	Nov. 7, 1873 – Oct. 16, 1878
3	Rt. Hon. Sir John Alexander Macdonald	Oct. 17, 1878 – June 6, 1891
4	Hon. Sir John Joseph Caldwell Abbott	June 16, 1891 – Nov. 24, 1892
5	Rt. Hon. Sir John Sparrow David Thompson	Dec. 5, 1892 – Dec. 12, 1894
6	Hon. Sir Mackenzie Bowell	Dec. 21, 1894 – Apr. 27, 1896
7	Hon. Sir Charles Tupper	May 1, 1896 – July 8, 1896
8	Rt. Hon. Sir Wilfrid Laurier	July 11, 1896 – Oct. 6, 1911
9	Rt. Hon. Sir Robert Laird Borden	Oct. 10, 1911 – Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir Robert Laird Borden	Oct. 12, 1917 – July 10, 1920 (Unionist Administration)
11	Rt. Hon. Arthur Meighen	July 10, 1920 – Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. William Lyon Mackenzie King	Dec. 29, 1921 – June 28, 1926
13	Rt. Hon. Arthur Meighen	June 29, 1926 – Sept. 25, 1926
14	Rt. Hon. William Lyon Mackenzie King	Sept. 25, 1926 – Aug. 6, 1930
15	Rt. Hon. Richard Bedford Bennett	Aug. 7, 1930 – Oct. 23, 1935
16	Rt. Hon. William Lyon Mackenzie King	Oct. 23, 1935 – Nov. 15, 1948
17	Rt. Hon. Louis Stephen St. Laurent	Nov. 15, 1948 – ...

4.—Members of the Seventeenth Ministry, as at July 15, 1954

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions of the Year Book.

Office	Occupant	Date of First Appointment[1]	Date of Appointment to Present Portfolio
Prime Minister and President of the Queen's Privy Council for Canada.	Rt. Hon. LOUIS STEPHEN ST. LAURENT	Dec. 10, 1941	Nov. 15, 1948
Minister of Trade and Commerce and Minister of Defence Production	Rt. Hon. C. D. HOWE	Oct. 23, 1935	Jan. 19, 1948 Mar. 22, 1951
Minister of Agriculture	Rt. Hon. J. G. GARDINER	Oct. 28, 1935	Oct. 28, 1935
Minister of National Health and Welfare	Hon. PAUL MARTIN	Apr. 18, 1945	Dec. 12, 1946
Minister of National Revenue	Hon. J. J. McCANN	Apr. 18, 1945	Apr. 18, 1945
Minister of Labour	Hon. M. F. GREGG	Jan. 19, 1948	Aug. 7, 1950
Secretary of State for External Affairs	Hon. L. B. PEARSON	Sept. 10, 1948	Sept. 10, 1948
Minister of Justice and Attorney General	Hon. S. S. GARSON	Nov. 15, 1948	Nov. 15, 1948
Minister of Public Works	Hon. ROBERT H. WINTERS	Nov. 15, 1948	Sept. 17, 1953
Minister of Veterans Affairs	Hon. HUGUES LAPOINTE	Aug. 24, 1949	Aug. 7, 1950
Minister of Finance and Receiver General	Hon. W. E. HARRIS	Jan. 18, 1950	July 1, 1954
Minister of Mines and Technical Surveys	Hon. GEORGE PRUDHAM	Dec. 13, 1950	Dec. 13, 1950
Postmaster General	Hon. ALCIDE CÔTÉ	Feb. 13, 1952	Feb. 13, 1952
Minister of Fisheries	Hon. JAMES SINCLAIR	Oct. 15, 1952	Sept. 17, 1953
Minister of National Defence	Hon. RALPH O. CAMPNEY	Oct. 15, 1952	July 1, 1954
Leader of the Government in the Senate and Solicitor General	Hon. WILLIAM R. MACDONALD	May 12, 1953	May 12, 1953 Jan. 12, 1954
Minister of Citizenship and Immigration	Hon. JOHN W. PICKERSGILL	June 12, 1953	July 1, 1954
Minister of Northern Affairs and National Resources	Hon. JEAN LESAGE	Sept. 17, 1953	Sept. 17, 1953
Minister of Transport	Hon. GEORGE C. MARLER	July 1, 1954	July 1, 1954
Secretary of State of Canada	Hon. ROCH PINARD	July 1, 1954	July 1, 1954

[1] Appointee was not necessarily sworn in on date given.

Administrative duties in the various departments of government became so burdensome during World War II that Parliamentary Assistants were appointed to assist six Cabinet Ministers with their parliamentary duties. The practice was extended after the War and at July 15, 1954, there were 11 Parliamentary Assistants, as follows:—

To Prime Minister	W. S. WEIR
To Minister of Agriculture	ROBERT McCUBBIN
To Minister of Fisheries	J. WATSON MACNAUGHT
To Minister of Veterans Affairs	C. E. BENNETT
To Minister of National Defence	J. A. BLANCHETTE
To Minister of Transport	L. LANGLOIS
To Postmaster General	T. A. M. KIRK
To Minister of Finance	W. M. BENIDICKSON
To Minister of National Health and Welfare	F. G. ROBERTSON
To Minister of Defence Production	JOHN H. DICKEY
To Minister of Public Works	M. BOURGET

The Privy Council.—The Queen's Privy Council for Canada is composed of about seventy members who are sworn of the Council by the Governor General, on the advice of the Prime Minister, and who retain their membership for life. The Council consists, chiefly, of present and former Ministers of the Crown. It does not meet as a functioning body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by the Ministers who constitute the Cabinet of the day.

5.—Members of the Queen's Privy Council for Canada, According to Seniority Therein, as at July 15, 1954

NOTE.—In this list the prefix "The Rt. Hon." indicates membership in the United Kingdom Privy Council. Clerk of the Privy Council and Secretary to the Cabinet, R. B. BRYCE; Assistant Clerk of the Privy Council, A. M. HILL.

Member[1]	Date When Sworn In
The Rt. Hon. Sir THOMAS WHITE	Oct. 10, 1911
The Rt. Hon. ARTHUR MEIGHEN	Oct. 2, 1915
The Hon. ESIOFF LEON PATENAUDE	Oct. 6, 1915
The Hon. ALBERT SEVIGNY	Jan. 8, 1917
The Hon. JAMES ALEXANDER CALDER	Oct. 12, 1917
The Hon. SYDNEY CHILTON MEWBURN	Oct. 12, 1917
The Hon. THOMAS ALEXANDER CRERAR	Oct. 12, 1917
The Hon. HENRY HERBERT STEVENS	Sept. 21, 1921
The Hon. JAMES HORACE KING	Feb. 3, 1922
The Hon. EDWARD JAMES MCMURRAY	Nov. 14, 1923
The Rt. Hon. CHARLES VINCENT MASSEY	Sept. 16, 1925
The Hon. CHARLES AVERY DUNNING	Mar. 1, 1926
The Hon. WILLIAM DAUM EULER	Sept. 25, 1926
H.R.H. THE DUKE OF WINDSOR	Aug. 2, 1927
The Hon. ARTHUR CHARLES HARDY	July 31, 1930
The Hon. HUGH ALEXANDER STEWART	Aug. 7, 1930
The Hon. DONALD MATHESON SUTHERLAND	Aug. 7, 1930
The Hon. THOMAS GEROW MURPHY	Aug. 7, 1930
The Hon. WILLIAM DUNCAN HERRIDGE	June 17, 1931
The Hon. SAMUEL GOBEIL	Aug. 14, 1935
The Hon. LUCIEN HENRI GENDRON	Aug. 30, 1935
The Hon. WILLIAM EARL ROWE	Aug. 30, 1935
The Hon. ONESIME GAGNON	Aug. 30, 1935
The Hon. CHARLES GAVAN POWER	Oct. 23, 1935
The Rt. Hon. JAMES LORIMER ILSLEY	Oct. 23, 1935
The Hon. JOSEPH ENOIL MICHAUD	Oct. 23, 1935
The Rt. Hon. CLARENCE DECATUR HOWE[2]	Oct. 23, 1935
The Rt. Hon. JAMES GARFIELD GARDINER[2]	Nov. 4, 1935
The Hon. JAMES ANGUS MACKINNON	Jan. 23, 1939
The Hon. WILLIAM PATE MULOCK	July 8, 1940
The Hon. COLIN WILLIAM GEORGE GIBSON	July 8, 1940
The Hon. JOSEPH THORARINN THORSON	June 11, 1941
The Hon. WILLIAM FERDINAND ALPHONSE TURGEON	Oct. 8, 1941
The Rt. Hon. LOUIS STEPHEN ST. LAURENT[3]	Dec. 10, 1941
The Rt. Hon. Sir WINSTON LEONARD SPENCER CHURCHILL	Dec. 29, 1941
The Hon. ALPHONSE FOURNIER	Oct. 7, 1942
The Hon. ERNEST BERTRAND	Oct. 7, 1942
The Hon. LEO RICHER LAFLÈCHE	Oct. 7, 1942
The Hon. BROOKE CLAXTON	Oct. 13, 1944
The Hon. ANDREW GEORGE LATTA MCNAUGHTON	Nov. 2, 1944
The Hon. JOSEPH ARTHUR JEAN	Apr. 18, 1945
The Hon. LIONEL CHEVRIER	Apr. 18, 1945
The Hon. PAUL JOSEPH JAMES MARTIN[2]	Apr. 18, 1945
The Hon. DOUGLAS CHARLES ABBOTT	Apr. 18, 1945
The Hon. JAMES JOSEPH MCCANN[2]	Apr. 18, 1945
The Hon. DAVID LAURENCE MACLAREN	Apr. 18, 1945
The Hon. THOMAS VIEN	July 19, 1945
The Hon. WISHART MCLEA ROBERTSON	Sept. 4, 1945
The Hon. MILTON FOWLER GREGG[2]	Sept. 2, 1947
The Hon. ROBERT WELLINGTON MAYHEW	June 11, 1948
The Hon. LESTER BOWLES PEARSON[2]	Sept. 10, 1948
The Hon. STUART SINCLAIR GARSON[2]	Nov. 15, 1948
The Hon. ROBERT HENRY WINTERS[2]	Nov. 15, 1948
The Hon. FREDERICK GORDON BRADLEY	Apr. 1, 1949
The Hon. CHARLES JOST BURCHELL	Apr. 1, 1949
The Hon. GASPARD FAUTEUX	May 16, 1949
The Hon. HUGUES LAPOINTE[2]	Aug. 25, 1949
The Hon. GABRIEL EDOUARD RINFRET	Aug. 25, 1949
The Hon. WALTER EDWARD HARRIS[2]	Jan. 18, 1950
The Hon. GEORGE PRUDHAM[2]	Dec. 13, 1950
The Hon. GEORGE BLACK	Aug. 3, 1951
VISCOUNT ALEXANDER OF TUNIS	Jan. 29, 1952
The Hon. ALCIDE CÔTÉ[2]	Feb. 13, 1952
The Hon. JAMES SINCLAIR[2]	Oct. 15, 1952
The Hon. RALPH OSBORNE CAMPNEY[2]	Oct. 15, 1952
The Hon. ELIE BEAUREGARD	May 12, 1953
The Hon. WILLIAM ROSS MACDONALD[2]	May 12, 1953
The Hon. GEORGE ALEXANDER DREW	May 12, 1953
The Hon. JOHN WHITNEY PICKERSGILL[2]	June 12, 1953
The Rt. Hon. THIBAUDEAU RINFRET	Sept. 16, 1953
The Hon. JEAN LESAGE[2]	Sept. 17, 1953
The Hon. PATRICK KERWIN	July 1, 1954
The Hon. GEORGE CARLYLE MARLER[2]	July 1, 1954
The Hon. ROCH PINARD[2]	July 1, 1954

22nd Parliament.	1st	Nov. 12, 1953	June 26, 1954	226	139	Aug. 10, 1953[3] Oct. 8, 1953[4]

---

[1] The ordinary legal limit of duration for each Parliament is five years.

[2] Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50).

[3] Date of general election.

[4] Writs returnable.

[5] Dissolution of Parliament.

[6] During the war years Parliament was kept in almost continuous session. When prorogation took place it was followed immediately by a new session. During long adjournments provision was made whereby the Speaker could reconvene Parliament before the date previously set for reassembly.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada, consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice, most Public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of Public Bills in the Senate. Private Bills usually originate in the Senate. (*See* Chap. XXIX for current legislation.)

Under Sect. 91 of the British North America Acts, 1867-1952, the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada subject to certain exceptions; the public debt and property; the regulation of trade and commerce; unemployment insurance;

the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses, and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks, and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by this Act assigned exclusively to the legislatures of the provinces.

In addition, under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures, although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (14-15 Geo. VI, c. 32), it was declared that the Parliament of Canada might make laws in relation to old age pensions in Canada, but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by provinces in Table 7.

Hodges, Nancy	Victoria

The House of Commons.—The British North America Act, 1867, provided that, in respect of representation in the House of Commons, the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that, on the completion of a census of 1871 and of each subsequent decennial census, the representation of the several provinces should be readjusted from time to time provided the proportionate representation of the provinces as prescribed by the Act was not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. Accordingly, the Act was amended in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

> The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the general election of 1949.

After the completion of the 1951 Census, it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended to provide representation on the following basis:—

> "Sect. 51.—(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:—
>
> "1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.
>
> "2. If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.
>
> "3. Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.

> "4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.
>
> "5. On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members than any other province that according to the results of the then last decennial census did not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.
>
> "6. Such readjustment shall not take effect until the termination of the then existing Parliament.
>
> "(2) The Yukon Territory as constituted by chapter forty-one of the Statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member." (R.S.C. 1952, c. 304.)

The principal effect of these new rules is that the representation of any province shall not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualification that the rule shall not work out in such manner that the representation of a province with a smaller population shall be greater than any province with a larger population.

Subsequently, Parliament enacted a measure, "An Act to readjust the Representation in the House of Commons, 1952" (I Eliz. II, c. 48), effective in the general election of 1953, which provided that representation in the House of Commons shall be on the following basis:—

> "Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members."

The number of representatives of each province elected at each of the 22 general elections since Confederation is given in Table 9.

[1] By-elections from July 15, 1954, to the date of going to press are included in Appendix I.

The Opposition.—The Opposition occupies an essential place in constitutions based on the British parliamentary system. Like many other institutions, such as that of the premiership, for instance, it is founded on the unwritten customs that have been accepted and become firmly established.

The choice of the Canadian electorate not only determines who shall govern Canada but, by deciding which party receives the second largest number of seats in the House of Commons, it designates which of the major parties becomes the Official Opposition. The function of the Leader of the Opposition is to offer intelligent and constructive criticism of the Government of the day.

When criticism by the Opposition becomes sufficiently effective it can overthrow the existing Government and the Leader of the Opposition might then, as a result of the ensuing election, become Prime Minister.

Although the position of Leader of the Opposition is not recognized in the British North America Act, it received statutory acknowledgment in Canada in 1927. The Senate and House of Commons Act of that year provided for an annual salary to be paid to the Leader of the Opposition in addition to his indemnity as a Member of the House.

Indemnities and Allowances.—Members of the Senate receive a sessional allowance at the rate of $8,000 per annum. In addition, they receive, at the end of each calendar year, an annual expense allowance of $2,000 which is subject to income tax. Members of the House of Commons are paid a sessional allowance at the rate of $8,000 per annum. In addition, they receive $2,000 as an expense allowance paid at the end of each calendar year. This allowance, except in the case of Ministers of the Crown and the Leaders of the Opposition in the House and in the Senate, is not subject to income tax. The remuneration of the Prime Minister is $25,000 a year and of a Cabinet Minister and the Leader of the Opposition $15,000 a year, in addition to the sessional allowance and expense allowance each receives as a Member of Parliament. A Cabinet Minister is also entitled to a motor-car allowance of $2,000. The Speakers of the Senate and of the House of Commons receive, besides their sessional allowance and expense allowance, a salary of $9,000 and a motor-car allowance of $1,000 and are also entitled to $3,000 in lieu of a residence. The Deputy Speaker of the House of Commons receives a salary of $6,000 and an allowance of $1,500 in lieu of a residence. The Deputy Chairman of Committees receives an annual allowance of $2,000. Parliamentary Assistants to the Ministers of the Crown receive $8,000 sessional allowance as Members of Parliament, $4,000 a year as Parliamentary Assistants and the $2,000 expense allowance paid to all Members of Parliament.

The Federal Government Franchise.—The present franchise laws are contained in the Canada Elections Act (R.S.C. 1952, c. 23). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years and who have been ordinarily resident in Canada for 12 months prior to polling day at a federal election, and ordinarily resident in the electoral district on the date of the issue of the writ ordering such election. Persons denied the right to vote are:—

(1) Judges appointed by the Governor General in Council;
(2) The returning officer for each electoral district;
(3) Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
(4) Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II, or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property;
(5) Persons restrained of their liberty or deprived of the management of their property by reason of mental disease;
(6) Persons disqualified, under any law relating to the disqualification of electors, for corrupt and illegal practices.

The Canadian Forces Voting Regulations set out in the Schedule to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1940, 1945, 1949 and 1953

NOTE.—Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948–49 edition, p. 94.

[1] Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1953, 25,285 voters on the list cast 40,508 votes. [2] Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1953, 98,208 voters on the list cast 124,773 votes. [3] Electoral District of Yukon. [4] Electoral District of Mackenzie River.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (R.S.C. 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on Private Bills referred to the Court under any rules or orders of the Senate or the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of $2,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment, whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts.

The judgment of the Supreme Court of Canada in all cases is final and conclusive.

13.—Chief Justice and Judges of the Supreme Court of Canada, as at July 15, 1954

(In order of seniority)

Name	Date of Appointment
The Hon. Chief Justice PATRICK KERWIN	July 1, 1954[1]
The Hon. Justice ROBERT TASCHEREAU	Feb. 9, 1940
The Hon. Justice I. C. RAND	Apr. 22, 1943
The Hon. Justice ROY L. KELLOCK	Oct. 3, 1944
The Hon. Justice JAS. W. ESTEY	Oct. 6, 1944
The Hon. Justice CHARLES H. LOCKE	June 3, 1947
The Hon. Justice JOHN R. CARTWRIGHT	Dec. 23, 1949
The Hon. Justice J. H. GERALD FAUTEUX	Dec. 23, 1949
The Hon. Justice DOUGLAS CHARLES ABBOTT	July 1, 1954

[1] First appointed as a Judge of the Supreme Court, July 20, 1935.

Exchequer Court.—The Exchequer Court of Canada was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (R.S.C. 1952, c. 98). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada for which sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (R.S.C. 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds $500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed $500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. Admiralty jurisdiction was first conferred in 1891 by the Admiralty Act (54-55 Vict., c. 29) and the admiralty jurisdiction is now governed by the Admiralty Act (R.S.C.

1952, c. 1). Under this Statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (R.S.C. 1952, c. 234), established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (R.S.C. 1952, c. 271), the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of para. 21 of Sect. 91 of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (R.S.C. 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Farmers' Creditors Arrangement Act.—Under the Farmers' Creditors Arrangement Act (R.S.C. 1952, c. 111), the county or district courts of the provinces are established as courts for the purposes of this Act and the appeal courts of the provinces are given appellate jurisdiction.

Income Tax Appeal Board.—By the Income Tax Act (R.S.C. 1952, c. 148) an Appeal Board is established, consisting of a chairman and not fewer than two or more than four members, with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court.

Provincial Judiciaries*

Certain provisions of the British North America Act govern, to some extent, the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts, both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General in Council shall appoint the judges of the superior, district, and county courts in each province except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (R.S.C. 1952, c. 157). Under Sect. 99 the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and House of Commons. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the county or union of counties for which the court is established.

---

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, Justices of the Peace, Magistrates and Juvenile Court Judges. Except in Quebec, there are County or District Courts of each province with limited jurisdiction varying from $500 to $2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc., and there is a Court of Appeal in each province.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (30-31 Vict., c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings, other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province, including the constitution, maintenance and organization of provincial courts both of civil and criminal jurisdiction, and including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally, all matters of a merely local or private nature in the province.

---

* The information given in Subsections 1 to 10 of this Section is brought up to Mar. 31, 1954. Provincial elections held between that date and the date of going to press are covered in the Appendix.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education, subject to certain restrictions relating to the establishment of schools by religious minorities. These powers, with similar restrictions, were conferred on the more recently admitted provinces on their inclusion as units in the federation.

The Provincial Legislatures may also make laws, under Sect. 95, in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—The main qualifications for persons entitled to be registered as voters in provincial elections are given below and apply, with modifications, to voters in all provinces:—

> Every person, male or female, at the age of 21 years, who is a Canadian citizen or a British subject and was resident in the province of registration 12 months prior to the election date and with a certain residence requirement in the province and within the electoral district of polling, and who falls under no statutory disqualifications, is entitled to be registered as a voter.

The principal exception to the above gives voting privileges to persons in Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years. The Elections Act of each province contains details regarding qualifications and disqualifications of the franchise.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Colonel the Honourable Sir Leonard Outerbridge is the present Lieutenant-Governor of the Province; he was commissioned on Aug. 17, 1949.

The Legislative Assembly has 28 members elected for a term of five years. The General Assembly elected Nov. 26, 1951, is the 30th in the history of Newfoundland and the 2nd since Confederation.

The Premier and each Cabinet Minister receives a salary of $7,000 per annum plus a sessional indemnity of $3,000. Each Member of the House of Assembly receives a sessional indemnity of $3,000. An additional allowance of $2,000 is made to the Leader of the Opposition.

14.—Legislatures of Newfoundland since Confederation and Ministry as at Mar. 31, 1954

Legislatures, 1949-54

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
May 27, 1949	1st General Assembly	4	July 13, 1949	Nov. 3, 1951
Nov. 26, 1951	2nd General Assembly	4	Mar. 12, 1952	[1]

[1] Life of Legislature not expired at Mar. 31, 1954.

First Ministry

(Party standing at latest General Election, Nov. 26, 1951: 22 Liberals; 4 Progressive Conservatives; 2 vacant.)

NOTE.—Date of appointment does not necessarily mean that the Minister was sworn in on date given.

Office	Name	Date of First Appointment	Date of Present Appointment
Premier and Minister of Economic Development	Hon. J. R. SMALLWOOD	Apr. 1, 1949	Apr. 1, 1949
Attorney General	Hon. L. R. CURTIS	Apr. 1, 1949	Apr. 1, 1949
Minister of Public Welfare	Hon. H. L. POTTLE	Apr. 4, 1949	Apr. 4, 1949
Minister of Fisheries and Co-operatives	Hon. W. J. KEOUGH	July 29, 1949	July 29, 1949
Minister of Public Works	Hon. E. S. SPENCER	July 29, 1949	July 29, 1949
Minister of Education	Hon. J. R. CHALKER	Apr. 4, 1950	Dec. 23, 1952
Minister of Labour	Hon. C. H. BALLAM	Apr. 4, 1950	Apr. 4, 1950
Minister of Health	Hon. P. S. FORSEY	July 29, 1950	Dec. 23, 1952
Minister of Municipal Affairs and Supply	Hon. S. J. HEFFERTON	July 29, 1949	Dec. 23, 1952
Minister of Finance	Hon. GREGORY J. POWER	Dec. 15, 1951	Dec. 15, 1951
Minister of Provincial Affairs	Hon. MYLES P. MURRAY	Dec. 15, 1951	Dec. 15, 1951
Minister of Natural Resources	Hon. F. W. ROWE	May 21, 1952	May 21, 1952
Minister without portfolio	Hon. P. J. LEWIS	Dec. 15, 1951	Dec. 15, 1951

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly.

The Honourable T. W. L. Prowse, the present Lieutenant-Governor of the Province, was commissioned to office on Oct. 4, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 86.

The General Assembly elected Apr. 26, 1951, is the 47th in the history of Prince Edward Island Legislatures and the 22nd since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One-half of the Members of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote).

The annual salary of the Premier is $6,000 and the salaries of the Cabinet Ministers are as follows: Attorney and Advocate General and Provincial Treasurer, $5,000; Minister of Health and Welfare, Minister of Public Works and Highways, Minister of Industry and Natural Resources, Minister of Agriculture, $4,000 each; Minister of Education and Provincial Secretary, $3,000 each. Each Member of the Assembly is paid the sum of $1,000 for each session attended by him and an additional amount of $500, tax free, as indemnity for expenses incurred. The Speaker is paid an additional sum of $400 and a further additional amount of $200, tax free, as an indemnity. The Leader of the Opposition is paid an additional sum of $800 and a further additional amount of $200, tax free, for expenses incurred by him in relation to his official duties.

15.—Legislatures and Premiers of Prince Edward Island, 1935-54, and Ministry as at Mar. 31, 1954

Legislatures, 1935-1954[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
July 23, 1935	18th General Assembly	5	Sept. 25, 1935	Apr. 21, 1939
May 18, 1939	19th General Assembly	4	Mar. 20, 1940	Aug. 20, 1943
Sept. 15, 1943	20th General Assembly	4	Feb. 15, 1944	Oct. 27, 1947
Dec. 11, 1947	21st General Assembly	5	Feb. 24, 1948	Mar. 30, 1951
Apr. 26, 1951	22nd General Assembly	[2]	Oct. 23, 1951	[2]

[1] The Ministries from 1935-54 were: 19th Ministry, sworn in Oct. 14, 1933, under the leadership of Hon. W. J. P. MacMillan; 20th Ministry, sworn in Aug. 15, 1935, under the leadership of Hon. W. M. Lea; 21st Ministry, sworn in Jan. 14, 1936, under the leadership of Hon. T. A. Campbell; 22nd Ministry, sworn in May 11, 1943, under the leadership of Hon. J. Walter Jones; 23rd Ministry sworn in May 25, 1953, under the leadership of Hon. A. W. Matheson. [2] Life of Legislature not expired at Mar. 31, 1954.

Twenty-Third Ministry

(Party standing at latest General Election, Apr. 26, 1951: 24 Liberals and 6 Progressive Conservatives.)

NOTE.—Ministers are shown at date of original appointment as a Minister and at date of appointment to present portfolio, despite the formation of a new Ministry consequent upon the appointment of a new Premier. Date of appointment does not necessarily mean that the Minister was sworn in on date given.

Office	Name	Date of First Appointment	Date of Present Appointment
Premier and President of the Executive Council	Hon. ALEXANDER W. MATHESON	May 11, 1943	May 25, 1953
Minister of Health and Welfare	Hon. B. EARLE MACDONALD	May 25, 1953	May 25, 1953
Minister of Agriculture	Hon. C. CLEVELAND BAKER	Apr. 16, 1949	Oct. 13, 1949
Provincial Secretary	Hon. WILLIAM HUGHES	May 11, 1943	May 25, 1953
Minister of Industry and Natural Resources	Hon. EUGENE CULLEN	Apr. 16, 1949	Oct. 13, 1949
Attorney and Advocate General and Provincial Treasurer	Hon. WALTER E. DARBY	Oct. 13, 1949	Oct. 13, 1949
Minister of Public Works and Highways	Hon. DOUGALD MACKINNON	Sept. 16, 1939	June 16, 1951
Minister of Education	Hon. KEIR CLARK	June 16, 1951	June 16, 1951
Minister without portfolio	Hon. EDWARD P. FOLEY[1]	June 10, 1954	June 10, 1954

[1] Added to table after Mar. 31, 1954.

Subsection 3.—Nova Scotia

The Government of the Province of Nova Scotia has a Lieutenant-Governor, an Executive Council and a House of Assembly.

The Honourable Alistair Fraser, the present Lieutenant-Governor, was commissioned to office Sept. 1, 1952. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 87.

The General Assembly has 37 members elected for five years, the maximum duration of its existence. The Assembly elected May 26, 1953, was the 45th in Nova Scotia's history and the 22nd since Confederation.

The Premier of the Province receives a salary of $12,000 per annum and each Cabinet Minister a salary of $10,000 per annum. Each Member of the House of Assembly receives a sessional indemnity of $2,400 and an allowance of $1,200 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of $3,000 in addition to his sessional indemnity.

16.—Legislatures and Premiers of Nova Scotia, 1933-54, and Ministry as at Mar. 31, 1954

Legislatures, 1933-54[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
Aug. 22, 1933	17th General Assembly	4	Mar. 1, 1934	May 20, 1937
June 29, 1937	18th General Assembly	4	Mar. 1, 1938	Sept. 19, 1941
Oct. 28, 1941	19th General Assembly	4	Feb. 19, 1942	Sept. 12, 1945
Oct. 23, 1945	20th General Assembly	4	Mar. 14, 1946	Apr. 27, 1949
June 9, 1949	21st General Assembly	4	Mar. 21, 1950	Apr. 14, 1953
May 26, 1953	22nd General Assembly	[2]	Feb. 24, 1954	[2]

[1] The Ministries from 1933-54 were: 12th Ministry, sworn in Sept. 5, 1933, under the leadership of Hon. Angus L. Macdonald; 13th Ministry, sworn in July 10, 1940, under the leadership of Hon. A. S. MacMillan; 14th Ministry, sworn in Sept. 8, 1945, under the leadership of Hon. Angus L. Macdonald; 15th Ministry, sworn in Apr. 13, 1954, under the leadership of Hon. Harold Connolly. [2] Life of Legislature not expired at Mar. 31, 1954.

Fifteenth Ministry[1]

(Party standing at latest General Election, May 26, 1953: 22 Liberals, 12 Progressive Conservatives, 2 Co-operative Commonwealth Federation and one vacancy.)

NOTE.—See headnote to Table 15.

Office	Name	Date of First Appointment	Date of Present Appointment
Premier, Minister of Public Health and Welfare	Hon. HAROLD CONNOLLY	Feb. 24, 1941	Apr. 13, 1954
Minister of Highways and Public Works	Hon. A. W. MACKENZIE	Sept. 8, 1945	June 11, 1954
Minister without portfolio (in charge of administration of Nova Scotia Liquor Control Act)	Hon. GEOFFREY STEVENS	Apr. 4, 1946	Apr. 13, 1954
Attorney General and Minister of Mines and Labour	Hon. M. A. PATTERSON, Q.C.	June 10, 1947	Apr. 13, 1954
Provincial Secretary and Minister of Education	Hon. HENRY D. HICKS	Sept. 30, 1949	Apr. 13, 1954
Provincial Treasurer and Minister of Municipal Affairs	Hon. R. M. FIELDING, Q.C.	Dec. 7, 1949	Apr. 13, 1954
Minister of Trade and Industry	Hon. W. T. DAUPHINEE	Sept. 5, 1950	Apr. 13, 1954
Minister without portfolio (Chairman of the Nova Scotia Power Commission)	Hon. A. B. DEWOLFE	Sept. 5, 1950	Apr. 13, 1954
Minister of Agriculture and Marketing	Hon. COLIN H. CHISHOLM	June 11, 1954	June 11, 1954

[1] As at June 15, 1954.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly.

The Honourable David Laurence MacLaren, the present Lieutenant-Governor, was commissioned to office Nov. 1, 1945. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 89.

The General Assembly elected Sept. 22, 1952, is the 42nd in New Brunswick's history and the 15th since Confederation. It has 52 members who are elected for a statutory term of five years.

The Premier receives $5,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is $5,000, the amount paid as indemnity to each Member of the House of Assembly is $2,000, plus an additional $1,000 allowance for expenses. The Leader of the Opposition receives an additional $2,000. An allowance of $1,000, in addition to the regular indemnity, is made to the Speaker.

17.—Legislatures and Premiers of New Brunswick, 1935-54, and Ministry as at Mar. 31, 1954

Legislatures, 1935-54[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
June 27, 1935	11th General Assembly	4	Mar. 5, 1936	Oct. 26, 1939
Nov. 20, 1939	12th General Assembly	5	Apr. 4, 1940	July 10, 1944
Aug. 28, 1944	13th General Assembly	4	Feb. 20, 1945	May 18, 1948
June 28, 1948	14th General Assembly	4	Mar. 8, 1949	July 16, 1952
Sept. 22, 1952	15th General Assembly	[2]	Feb. 12, 1953	[2]

[1] The Ministries from 1935-54 were: 20th Ministry, sworn in July 16, 1935, under the leadership of Hon. A. A. Dysart; 21st Ministry, sworn in Mar. 13, 1940, under the leadership of Hon. J. B. McNair; 22nd Ministry, sworn in Oct. 8, 1952, under the leadership of Hon. H. J. Flemming.

[2] Life of Legislature not expired at Mar. 31, 1954.

Twenty-Second Ministry

(Party standing at latest General Election, Sept. 22, 1952: 36 Conservatives, 16 Liberals.)

Note.—See headnote to Table **15**.

Office	Name	Date of First Appointment	Date of Present Appointment
Premier and Minister of Public Works	Hon. Hugh John Flemming	Oct. 8, 1952	Oct. 8, 1952
Attorney General	Hon. William J. West	Oct. 8, 1952	Oct. 8, 1952
Provincial Secretary-Treasurer	Hon. D. D. Patterson	Oct. 8, 1952	Oct. 8, 1952
Minister of Agriculture	Hon. C. B. Sherwood	Oct. 8, 1952	Oct. 8, 1952
Minister of Health and Social Services	Hon. J. F. McInerney	Oct. 8, 1952	Oct. 8, 1952

Minister of Education and Municipal Affairs	Hon. Claude D. Taylor	Oct. 8, 1952	Oct. 8, 1952
Minister of Labour	Hon. Arthur E. Skaling	Oct. 8, 1952	Oct. 8, 1952
Minister of Industry and Development	Hon. J. Roger Pichette	Oct. 8, 1952	Oct. 8, 1952
Minister without portfolio and President of the Executive Council	Hon. T. Babbitt Parlee	Oct. 8, 1952	Oct. 8, 1952
Minister without portfolio and Chairman of the New Brunswick Electric Power Commission	Hon. Edgar Fournier	Oct. 8, 1952	Oct. 8, 1952

Subsection 5.—Quebec

The Government of Quebec consists of the Lieutenant-Governor, an Executive Council, and a bicameral legislature—the Legislative Council and the Legislative Assembly.

The Honourable Gaspard Fauteux, the present Lieutenant-Governor, was commissioned to office Oct. 3, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 90.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 92 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of laws that already exist. A Bill, to be approved by the Lieutenant-Governor, must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years.

Salaries and allowances of the Premier, Members of the Executive Council, Legislative Council and Legislative Assembly are fixed according to R.S.Q. 1941, c. 4, as amended by 1-2 Eliz. II, as follows: all Members of the Legislative Assembly and Legislative Council receive $4,000 per annum as salary and $2,000 by way of allowances; in addition, the Premier receives $10,000 as salary, $4,000 allowances and $2,000 for lodging allowance; Ministers with portfolio an additional $8,000 as salary and $2,000 allowances; Ministers without portfolio an additional $3,000 salary and $2,000 allowances; the Leader of the Opposition in the Legislative Assembly an additional $6,000 salary, $2,000 allowances and $2,000 for lodging allowance; and the Leader of the Opposition in the Legislative Council an additional $5,000 salary and $2,000 allowances.

18.—Legislatures and Premiers of Quebec, 1935-54, the Ministry and Members of the Legislative Council as at Mar. 31, 1954

Legislatures, 1935-54[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
Nov. 25, 1935	19th General Assembly	1	Mar. 24, 1936	June 11, 1936
Aug. 17, 1936	20th General Assembly	4	Oct. 7, 1936	Sept. 23, 1939
Oct. 25, 1939	21st General Assembly	5	Feb. 20, 1940	June 29, 1944

Subsection 6.—Ontario

The Government of Ontario consists of the Lieutenant-Governor, the Executive Council and the House of Assembly. The Honourable Louis O. Breithaupt, LL.D., the present Lieutenant-Governor of the Province, was commissioned to office Jan. 24, 1952. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 92.

The House of Assembly, the single-chamber Legislature of the Province, is composed of 90 members elected for a statutory term of five years on an adult-suffrage basis.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, the Hydro-Electric Power Commission of Ontario, the Ontario Northland Transportation Commission, the Liquor Control Board and the Liquor Licence Board have been created.

Under the provisions of the Legislative Assembly Act (R.S.O. 1950, c. 202, as amended 1952, c. 51), each Member of the Assembly is paid an annual indemnity of $2,600 and an allowance for expenses of $1,300. In addition, the Speaker receives a special indemnity at the annual rate of $3,000 and an expense allowance of $2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of $1,000; and the Leader of the Opposition a special indemnity of $3,000 and an annual allowance of $2,000 for expenses. Each Member of the Cabinet receives the ordinary indemnity as a Member of the Legislature of $2,600 plus the $1,300 expense allowance in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is $14,000 and for a Cabinet Minister $10,000.

19.—Legislatures and Premiers of Ontario, 1934-54, and Ministry as at Mar. 31, 1954

Legislatures, 1934-54[1]

Minister of Mines	Hon. Philip T. Kelly	June 3, 1952	June 3, 1952
Minister of Planning and Development	Hon. William K. Warrender	Jan. 20, 1953	Jan. 20, 1953

Subsection 7.—Manitoba

Besides its Lieutenant-Governor, Manitoba has a Provincial Executive composed of 10 members and a Legislative Assembly of 57 members, elected for a statutory term of five years. The Honourable John Stewart McDiarmid, the present Lieutenant-Governor of the Province, was commissioned to office Aug. 1, 1953. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 94.

The Premier of the Province is paid a salary of $10,000 per annum and each of the other Members of the Cabinet $8,000. Members of the Legislature are each paid an indemnity of $2,000 and an expense allowance of $1,000. The Leader of the Opposition is paid an additional amount of $2,500 and the Speaker of the Legislature an additional amount of $2,500.

20.—Legislatures and Premiers of Manitoba, 1932-54, and Ministry as at Mar. 31, 1954

Legislatures, 1932-54[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
June 16, 1932	19th General Assembly	4	Feb. 14, 1933	June 12, 1936
July 27, 1936	20th General Assembly	5	Feb. 18, 1937	Mar. 13, 1941
Apr. 22, 1941	21st General Assembly	5	Dec. 9, 1941	Sept. 8, 1945
Oct. 15, 1945	22nd General Assembly	4	Feb. 19, 1946	Sept. 29, 1949
Nov. 10, 1949	23rd General Assembly	7	Feb. 14, 1950	Apr. 23, 1953
June 8, 1953	24th General Assembly	1	Feb. 2, 1954	[2]

[1] The Ministries from 1932-54 were: 12th Ministry, sworn in Aug. 8, 1922, under the leadership of Hon. J. Bracken; 13th Ministry, sworn in Jan. 14, 1943, under the leadership of Hon. Stuart S. Garson; 14th Ministry, sworn in Nov. 13, 1948, under the leadership of Hon. D. L. Campbell. [2] Life of Legislature not expired at Mar. 31, 1954.

Fourteenth Ministry

(Party standing at latest General Election, June 8, 1953: 32 Liberal Progressives, 3 Independent Liberal Progressives, 12 Progressive Conservatives, 5 Co-operative Commonwealth Federation, 1 Labour Progressive, 2 Social Credit, 2 Independents.

Note.—*See* headnote to Table 15.

Office	Name	Date of First Appointment	Date of Present Appointment
President of the Council and Minister of Dominion-Provincial Relations	Hon. Douglas L. Campbell	Sept. 21, 1936	Nov. 13, 1948 Dec. 14, 1948
Attorney-General	Hon. Ivan Schultz	Sept. 21, 1936	Nov. 7, 1952
Minister of Public Works	Hon. William Morton	Nov. 22, 1939	Aug. 19, 1950

Minister of Health and Public Welfare	Hon. Francis C. Bell	Dec. 14, 1948	Nov. 7, 1952
Minister of Education	Hon. Wallace C. Miller	Feb. 15, 1946	Aug. 16, 1950
Minister of Municipal Affairs and Provincial Secretary	Hon. Edmond Prefontaine	Dec. 1, 1951	Dec. 1, 1951 Sept. 4, 1953
Provincial Treasurer and Minister of Industry and Commerce	Hon. Ronald D. Turner	Dec. 1, 1951	Dec. 1, 1951 Sept. 4, 1953
Minister of Agriculture and Immigration	Hon. Ronald D. Robertson	Nov. 7, 1952	Nov. 7, 1952
Minister of Public Utilities	Hon. Charles L. Shuttleworth	Sept. 4, 1953	Sept. 4, 1953

Subsection 8.—Saskatchewan

The Government of the Province of Saskatchewan consists of a Lieutenant-Governor, an Executive Council, and a Legislative Assembly.

The Honourable W. J. Patterson, the present Lieutenant-Governor, was commissioned to office July 4, 1951. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 95.

The statutory number of members of the Legislative Assembly is 53, elected for a maximum term of five years.

As of Apr. 1, 1954, the Premier receives $8,500 and each Cabinet Minister $7,000 annually in addition to the sessional indemnity, while the Leader of the Opposition, the Speaker and the Deputy Speaker receive $4,000, $2,000 and $1,000, respectively. The sessional indemnity of a Member of the Legislature is $2,400 together with an expense allowance of $1,200. Members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake each receive an additional $500.

21.—Legislatures and Premiers of Saskatchewan, 1934-54, and Ministry as at Mar. 31, 1954

Legislatures, 1934-54[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
June 19, 1934	8th General Assembly	4	Nov. 15, 1934	May 14, 1938

Minister of Telephones	Hon. A. G. KUZIAK	Oct. 24, 1952	Oct. 24, 1952
Provincial Secretary	Hon. J. W. BURTON	Oct. 24, 1952	Oct. 24, 1952

Subsection 9.—Alberta

The Government of the Province of Alberta is composed of the Lieutenant-Governor, the Executive Council and the Legislative Assembly.

The Honourable John J. Bowlen, the present Lieutenant-Governor, was commissioned to office Feb. 1, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 96.

There are 61 members of the Legislative Assembly who are elected for a maximum period of five years.

The salary of the President of the Executive Council is $11,000 and of a Cabinet Minister $8,500. A special allowance of $2,500 is paid to the Leader of the Opposition. The sessional indemnity for each Member of the Legislative Assembly is $2,400 plus an expense allowance of $1,200.

22.—Legislatures and Premiers of Alberta, 1935-54, and Ministry as at Mar. 31, 1954

Legislatures, 1935-54[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
Aug. 22, 1935	8th General Assembly	9	Feb. 6, 1936	Feb. 16, 1940

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly.

Colonel the Honourable Clarence Wallace, the present Lieutenant-Governor of the Province, was commissioned to office Oct. 1, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 98.

The Legislative Assembly, elected for a statutory term of five years, has 48 members.

Members of the Executive Council and the Legislative Assembly each receive a sessional allowance of $2,000 and $1,000 for expenses. In addition, the Premier receives a salary of $9,000 and each Member of the Executive Council $7,500. The Leader of the Opposition has a special allowance of $2,000 and the Speaker and Deputy Speaker receive allowances of $1,800 and $500, respectively.

23.—Legislatures and Premiers of British Columbia, 1933-54, and Ministry as at Mar. 31, 1954

Legislatures, 1933-54[1]

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution
Nov. 2, 1933[2]	18th General Assembly	4	Feb. 20, 1934	Apr. 15, 1937
June 1, 1937	19th General Assembly	5	Oct. 26, 1937	July 22, 1941
Oct. 21, 1941	20th General Assembly	4	Dec. 4, 1941	Aug. 31, 1945

Minister of Health and Welfare	Hon. ERIC CHARLES FITZGERALD MARTIN	Aug. 1, 1952	Aug. 1, 1952

Subsection 11.—Yukon and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898. Provision is made for a local Government composed of a Chief Executive, styled Commissioner, and an elective Legislative Council of five members with a three-year tenure of office. The Commissioner administers the Government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of prisons and municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, administration of justice, and generally all matters of a local nature in the Territory. The seat of local government is at Whitehorse, Yukon Territory.

TERRITORIAL COUNCIL

(Five members elected 1952, for three years)

Dawson	V. C. Mellor	Whitehorse East	J. L. Phelps
Mayo	A. F. Berry	Whitehorse West	F. D. Locke
Carmacks	A. R. Hayes		

TERRITORIAL OFFICIALS

Commissioner (Whitehorse)	W. G. Brown
Superintendent of Works and Buildings	H. Tait
Registrar of Vital Statistics	W. D. Robertson
Legal Adviser	F. G. Smith

The Director of the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, is directly responsible for the general administration of the Territory under the Yukon Act (R.S.C. 1952, c. 298), and that Department has three lands and mining officials stationed in the Territory. Other Departments of the Federal Government, including Justice, National Revenue, Transport, Post Office, etc., also maintain officials in the Yukon Territory.*

Northwest Territories.—The Northwest Territories as reconstituted on Sept. 1, 1905, comprise:—

(1) all that part of Canada north of the Sixtieth Parallel of North Latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland, and

(2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

For administrative purposes, the Territories were divided into the provisional districts of Mackenzie, Keewatin and Franklin by Order in Council of Mar. 16, 1918. The Northwest Territories Act, 1905, as amended, provides for the Government of the Territories by a Commissioner (who is Deputy Minister of the Department of Northern Affairs and National Resources) under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. Provision is made in the Northwest Territories Act (S.C. 1953-54, c. 8) for a Council of nine members, four of whom shall be elected in the Mackenzie River district and five appointed by the Governor in Council. The Commissioner in Council has power to make ordinances for the Government of the Territories relating to subjects designated by the Governor in Council, subject to any Act of the Parliament of Canada applying to the Territories, respecting such matters as direct taxation within the Territories to raise revenue, establishment and tenure of territorial offices, maintenance of municipal institutions, licences, administration of civil justice, education, public health and generally all matters of a local nature. The administration of the Territories under the Northwest Territories Act and the ordinances passed by the Commissioner in Council is carried on by the Northern Administration and Lands Branch of the Department of Northern Affairs and

Officers of the Council—	
Secretary	R. BOUCHARD
Legal Adviser	WM. NASON

Section 3.—Municipal Government†

The earliest local government in Canada was carried out by the seigneurs of New France who bore, along with military command and the administration of justice, the responsibilities of appointing justices of the peace and clerks of roads. Some of these officers were soon replaced by a 'syndic' elected by the people, the first in 1644, though a mayor and two aldermen had held office briefly in the city of Quebec in 1643. When the syndics fell into disuse, their powers were delegated by the Governor to officials. The City of Quebec was incorporated in 1832, and the system of local government for the province decreed in 1840 was later remodelled by Acts of 1845, 1847, 1850 and 1860.

In the Atlantic Provinces, Saint John, N.B., had attained the distinction of becoming Canada's first incorporated city in 1785. Incorporation of Halifax, N.S., came in 1841 and Charlottetown, P.E.I., in 1855. In Newfoundland, St. John's was created a town in 1888.

The Ontario Parish and Town Officers Act of 1793 provided for an annual meeting in a parish or township to appoint local officers responsible to Parliament and the courts, but the meetings had no law-making powers. Brockville, in 1832, gained from the Governor in Council some local powers that had previously been exercised through the courts. In 1834, York was incorporated as the self-governing City of Toronto. The Municipal Act of 1849 became the foundation of the local government in Ontario and later provided a model for the western provinces. Subsequently, Acts have been passed in all provinces governing aspects of municipal incorporation, powers and duties. Constitutional provision that jurisdiction over municipal affairs would rest with the provinces has resulted, quite naturally, in dissimilarity in the organization of local government across the country. This stems not only from the difference in beginnings and subsequent independent growth in each province, but also from variations in requirements arising out of geographical and population differences.

---

* Following dissolution of the Council on June 30, 1954, the five appointed members were reappointed on July 1, 1954. General elections for the four elected members were held on Sept. 7, 1954.

† Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

The situation remains in a state of flux, with constant amendment of provincial Acts and charters in an attempt to solve old problems and to meet new ones. Just as the call for new and additional services has enlarged the scope of federal and provincial activities, the municipalities have had to assume responsibilities unheard of a few decades ago, or considered beyond their sphere of activity. As a result, amendments to Acts have varied from those enlarging the powers and the boundaries of municipalities, to those establishing closer provincial control and greater financial aid.

An outline of municipal organization at the end of 1953 in each of the provinces of Canada is given in the following paragraphs.*

Newfoundland.—Newfoundland has only one city, St. John's. The remainder of the population is dispersed in small settlements along the coast, and only since 1937 have a few of the larger of these been set up individually as towns with local councils or, where two or three are close together, as rural districts (43 in 1953). These latter are not rural municipalities but merely towns consisting of two or more settlements. Local affairs in the remainder of the Province are administered by the Provincial Government. In 1949, the Local Government Act was passed to facilitate incorporations. There are now thirty towns and two rural districts incorporated under the Act while there are eight local government communities with lesser powers of government.

Prince Edward Island.—The Province has one city, Charlottetown, and seven towns all incorporated by special Acts. They comprise less than one-half of one per cent of the area of the Island and only about a quarter of its population. The Village Service Act, 1951, provides for the incorporation of villages. The remaining area of the Province is not organized municipally, the three counties being provincial administrative units only.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the Province. The two cities, Halifax and Sydney, operate under special charters; the latter is also governed by certain special legislation. Forty towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality, and the other six comprise two municipalities each, making a total of 24 rural municipalities.

New Brunswick.—The Province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government in the rural areas. In effect, therefore, they are rural municipalities. In most cases certain of their powers apply in both rural and urban municipalities. The five cities—Saint John, Fredericton, Moncton, Edmundston and Lancaster—have special charters, and the 19 towns operate under the Towns Incorporation Act. There are three villages and 37 local improvement district areas within the counties but outside the cities, towns and villages; these have been incorporated for the provision of limited municipal services.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one-third of the Province, the remainder being governed by the Province as 'territories'. The organized area is divided into 76 county municipalities, which are divided again into local municipalities under the Municipal Code and designated as village, township or parish municipalities or simply as municipalities. The counties, as such, have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying districts with little or no population. There are 337 villages and 1,111 townships and parishes. A small number of these are independent of the counties in which they are located. Of the 35 cities, a few have special charters. The remainder, along with the 134 towns, are governed by the Cities and Towns Act and numerous special Acts.

---

* Municipalities are summarized by type of organization on p. 90.

Ontario.—Slightly more than one-tenth of the area of Ontario is municipally organized, the remainder being governed entirely by the Provincial Government. The older section of the Province is divided into 43 counties, five of which are united with others for administrative purposes. Although an incorporated municipality, each county is comprised of the towns, villages and townships situated within its borders, which provide its revenue. There are 29 cities, 152 towns, 157 villages, 573 townships and 15 improvement districts. Some of each are located in the northern districts of the Province, which are not organized into counties.

Manitoba.—Only the southern and settled section of Manitoba, comprising less than one-eighth of the area, is organized for local self-government. As in the other three western provinces, there is no county organization and all municipalities are independent, except of provincial control. There are four cities, three with special charters and one governed by a number of special Acts. General Acts govern the 33 towns, 39 villages, 109 rural municipalities and five suburban municipalities. An Act of 1944 (amended January 1945) authorizes organization of local government districts in unorganized or disorganized (formerly organized but later unorganized) territory, and 12 such districts have been set up.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are eight cities, 96 towns, 383 villages and 296 rural municipalities. The area so organized consists of most of the southern two-fifths of the Province. The remainder of this portion is administered for local purposes by the Province in unincorporated local improvement districts. The northern three-fifths is sparsely populated and without local government, though some municipal services are provided by the Province through operation of the Northern Administrative Area.

Alberta.—In Alberta there are cities, towns, villages and rural municipalities known as municipal districts. The latter three classes come under general Acts. Until 1951 each of the seven cities had its own charter, but these have been superseded by the City Act of 1951. There are 72 towns, 138 villages and 57 municipal districts, but less than one-fifth of the Province is so organized. There are also some unincorporated improvement districts administered by the Province in less densely settled areas. Four county municipalities have been set up. These are not counties as they exist in Ontario but municipalities in which the council administers education and municipal hospitals. They are included with the municipal districts mentioned above and in Table **24** on p. 90.

British Columbia.—Less than 0·5 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the Provincial Government. There are 35 cities, 49 villages and 29 districts. The latter are chiefly rural municipalities, except for those adjacent to the principal cities of Victoria and Vancouver, which are largely urban in character. It should be emphasized, however, that the application of the name "city" is somewhat different from the commonly accepted meaning in that several of them have populations of less than 1,000 and perhaps one-half or more would not normally be incorporated as cities in another province.

Yukon and Northwest Territories.—There are two cities and one town in the Yukon Territory and two local administrative districts in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 24.

24.—Municipalities, by Official Designation[1] and by Statistical Classification,[2] by Province, as at Dec. 31, 1953

[1] This section of the table groups the municipalities according to their official nomenclature which is roughly indicative of size and nature. *See* footnote 4.

[2] This section of the table groups the municipalities under the classification devised by the Dominion Provincial Conferences on Municipal Statistics, the classification being designed to bring municipalities into comparable groups for statistical presentation.

[3] Includes eight local government communities.

[4] Rural municipalities are designated by different names in the different provinces.

[5] Includes 15 local improvement districts.

[6] Includes five units of self-government known as "suburban municipalities". Does not include local government districts.

[7] Excludes 20 improvement districts.

[8] Includes four county municipalities. Excludes 55 improvement districts.

[9] Excludes 37 local improvement districts.

[10] Municipalities shown wholly or partly in metropolitan areas by the 1951 Census of Canada.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions.*—Royal Commissions established from Apr. 1, 1952, to Mar. 31, 1954, are reported here, in continuance of those previously reported in the Year Books beginning with the 1940 edition at pp. 1108-1110:—

Royal Commission appointed to inquire into claims *re* World War II. Oct. 23, 1952. *Commissioner:* Hon. T. A. Campbell.

Royal Commission appointed for the holding of inquiries regarding the revocation of Canadian Citizenship Certificates. July 17, 1953. *Commissioners:* His Hon. Wilfred Slater Lane, Hon. Paul Ste-Marie, *et al.*

Royal Commission appointed to inquire into whether the Criminal Law of Canada relating to the defence of insanity should be amended. Mar. 2, 1954. *Commissioners:* Hon. James C. McRuer, Dr. Gustave Desrochers, *et al.*

Royal Commission to inquire into whether the Criminal Law relating to criminal sexual psychopaths should be amended. Mar. 25, 1954. *Commissioner:* Hon. James C. McRuer, *et al.*

Provincial Royal Commissions.—Only those Royal Commissions established in 1953-54 are reported here, this list being in continuance of those in previous Year Books beginning with the 1948-49 edition, pp. 1222-1223:—

Newfoundland.—Royal Commission appointed to inquire into and report upon the agricultural resources of the Province. June 15, 1953. *Commissioners:* A. M. Shaw, W. M. Drummond and P. J. Murray.

Royal Commission appointed to inquire into the forestry resources of the Province. Feb. 22, 1954. *Commissioners:* Major General H. Kennedy, D. R. Cameron and R. C. Goodyear.

Royal Commission appointed under the Public Enquiries Act to prepare a comprehensive review of the financial position of the Province; also to recommend the form and scale of additional financial assistance for the continuance of public services at the levels and standards reached subsequent to the date of Union. Jan. 19, 1954. *Commissioners:* Hon. Philip J. Lewis, Hon. Calvert C. Pratt, Philip Gruchy, Gerald S. Doyle and Albert Perlin.

New Brunswick.—Royal Commission appointed to inquire into and concerning all matters proper for the disposition of government grants made available to and administered through several school administrative units of the Province; and the relative tax-paying ability of the Province in comparison with that of the other provinces of Canada. Sept. 11, 1953. *Chairman:* Dr. W. H. MacKenzie. *Commissioners:* Julianne Levesque and R. Donald Stewart.

Manitoba.—Royal Commission appointed to inquire into commercial fishing. Aug. 15, 1953. *Chairman:* M. N. Hryhorczuk.

The Industrial Commission was appointed Aug. 26, 1953, and the Highway Safety Commission was appointed Sept. 16, 1953. No Chairman was named in the Order in Council authorizing these Commissions.

British Columbia.—Royal Commission appointed to inquire into matters relating to the destruction, by slides, of a portion of the power-house of the Whatshan Development. Sept. 4, 1953. *Commissioner:* Hon. Mr. Justice J. V. Clyne. Report printed, 50 pp.

---

* Commissions constituted under Part I of the Federal Inquiries Act.

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

Section 1.—Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Though it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all the departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (30 Vict., c. 53) and conducts the concerns of all phases of agriculture. Research and experimentation are carried out by the Science Service and the Experimental Farms Service; the maintenance of standards and protection of products by the Production Service and Marketing Service; reclamation and development by the Prairie Farm Rehabilitation Administration and the Maritime Marshland Rehabilitation Administration; while security and price stability policies are administered under the Prairie Farm Assistance Administration and the Agricultural Prices Support Board. The results of work in these various fields and information on the policies of the Department in general are made available to the public through the Information Service.

Auditor General's Office.—The Office of Auditor General is authorized under the Financial Administration Act (R.S.C. 1952, c. 116). Duties include the auditing of accounts of expenditures and revenue of Canada, and of Crown companies and other instrumentalities, and the reporting thereon to Parliament.

The Department of Citizenship and Immigration.—This Department came into existence on Jan. 18, 1950, under the Minister of Citizenship and Immigration. It comprises the Canadian Citizenship Branch, the Canadian Citizenship Registration Branch, the Immigration Branch and the Indian Affairs Branch.

The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens.

The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force.

The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and transportation of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada.

The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 87 local agencies in the field.

The Minister of Citizenship and Immigration is responsible to Parliament for the National Film Board, the National Library, the Public Archives, and for the National Gallery of Canada which is governed by a Board of Trustees.

The Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, as far as possible, the principle of appointment by merit in filling permanent positions within departmental headquarters positions at Ottawa, termed the "inside service".

The Civil Service Act of 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It made the Commission responsible for establishing a system of organization and classification that would secure uniformity in the staffing of the various departments and in the salaries paid for work of equal levels of difficulty and responsibility.

The jurisdiction of the Commission now extends to all departments of the Government and to a large number of boards and commissions, exclusive of Crown corporations.

Solicitor General and Leader of the Government in the Senate

August 1, 1954

The Civil Service Commission, which is under the jurisdiction of the Secretary of State, consists of three members, one of whom serves as Chairman. Each member of the Commission is appointed by the Governor in Council for a term of 10 years, and each has the rank and standing of a Deputy Minister. The Commission has a staff of approximately 580 persons working under its direction and located in the headquarters office at Ottawa and in district offices at St. John's, N'f'ld., Halifax, N.S., Saint John, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver, B.C.

The Department of Defence Production.—The Department of Defence Production was established on Apr. 1, 1951, under the provisions of the Defence Production Act. Under this Act the Minister is given, with certain exceptions, exclusive authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition, all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1939, or the Defence Supplies Act, 1950, are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required, on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence supporting industries, particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. The main units of the Department are: the Ammunition Branch, the Aircraft Branch, the Electronics Branch, the General Purchasing Branch, the Guns Branch, the Machine Tools Branch, and the Shipbuilding Branch. In addition, there are various administrative or service units including Administration, Comptroller's, Economics and Statistics, Industrial Security, Legal, Secretary's, and the Financial Adviser's Branches.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, and Polymer Corporation Limited.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948, this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257); it was amended by 1-2 Eliz. II, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada at ten-year intervals.

The Bureau is the principal publication agency of the Federal Government; the subjects of the reports cover all aspects of the national economy. The Bureau reports to Parliament through the Minister of Trade and Commerce.

The Department of External Affairs.—The main function of this Department is the protection and advancement of Canadian interests abroad. The head of the Department of External Affairs is the Secretary of State for External Affairs. The senior permanent officer of the Department is the Under-Secretary (Deputy Minister), who is the chief adviser to the Secretary of State for External Affairs. He is assisted by an Associate Under-Secretary and by three Assistant Under-Secretaries and a Legal Adviser, and is advised by officers in charge of the various divisions, each responsible for a part of the work of the Department. The divisional heads are assisted by Foreign Service Officers, Administrative Officers and by the administrative staff of clerks, stenographers and typists. While serving abroad, Foreign Service Officers are formally designated as Ambassadors, Ministers, Counsellors, First, Second and Third Secretaries at diplomatic posts and as Consuls General, Consuls and Vice-Consuls at consular posts. Fifty-two diplomatic and consular posts are maintained abroad by Canada.

The work of the Department at Ottawa is performed by 17 divisions which can be grouped, according to their functions, into three categories—political, functional and administrative. There are five political divisions—American, Commonwealth, European, Far Eastern and United Nations; eight functional divisions—Consular, Defence Liaison (1) and (2), Economic, Information, Legal, Historical Research and Reports, and Protocol; and four administrative divisions—Establishments and Organization, Finance, Personnel, Supplies and Properties.

The Department of Finance.—The Department of Finance, created in June 1868, is under the authority of the Minister of Finance. The Department is responsible for the financial administration of Canada including raising the money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all Government disbursements.

The work of the Department is organized in seven principal Divisions: Administration, Financial Administration and Accounting Policy, Superannuation, Treasury Board, Taxation, Economic Policy, and International Economic Relations. The Royal Canadian Mint is a branch of the Department. The Inspector General of Banks and the Comptroller of the Treasury are officers of the Department.

The Tariff Board and the Canadian Farm Loan Board are responsible to Parliament through the Minister of Finance.

The Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and fresh-water fisheries is with the Federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish-culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on these International Commissions: Pacific Salmon Fisheries, Pacific Halibut, that for the Northwest Atlantic Fisheries, North Pacific Fisheries and Whaling.

The Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875. Under the Superintendent of Insurance, the Department administers the statutes of Canada applicable to: insurance, trust and loan companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; and Civil Service insurance. *See also* Chap. XXVI (Part II) and Chap. XXVII.

Under the relevant provincial statutes, the Department examines provincial trust companies in the Provinces of Manitoba and New Brunswick and loan and trust companies in the Province of Nova Scotia.

A Fire Prevention Branch was organized in 1919 with responsibility for the administration of Sect. 515 of the Criminal Code. It maintains fire-loss records, makes inspections, reports on fire-prevention legislation and protection methods and endeavours to extend and co-ordinate fire-prevention work in Canada.

The Department of Justice.—This Department provides legal services to the Government and the various government departments, including preparing and settling government legislation, settling instruments issued under the Great Seal, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administers federal statutes dealing with legal matters and provides administrative services for the Supreme Court of Canada and the Exchequer Court.

The Department also superintends the penitentiaries and administers the prison system of Canada.

The Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (63-64 Vict., c. 24). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; government annuities; government employee compensation; merchant seamen compensation; vocational training; publication of the *Labour Gazette*, as well as bulletins giving information on industrial and related subjects.

The Unemployment Insurance Commission and National Employment Service are also under the direction of the Minister of Labour. The Canada Labour Relations Board and the National Advisory Council on Manpower also act on behalf of the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization.

The Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (13 Geo. VI, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments into an integrated organization whose primary function is to provide technological assistance in the development of Canada's mineral resources through investigations, studies and research in the fields of geology, mineral dressing and metallurgy, and geodetic, topographic and other surveys. The Department is under the Minister of Mines and Technical Surveys and is divided into five branches: the Surveys and Mapping Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories and the Geographical Branch.

The Department also administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the gold industry.

Boards and Commissions are: Canadian Board on Geographical Names; Board of Examiners for Dominion Land Surveyors; International Boundary Commission and Interprovincial Boundary Commissions.

The Department of National Defence.—Created on Jan. 1, 1923, by the National Defence Act, 1922, the Department of National Defence was originally an amalgamation of the Department of Militia and Defence, the Naval Service and the Air Board.

In 1940, the Department of National Defence was separated into three departments, one for each of the Armed Services, and continued under this organization until the cessation of hostilities. In order to afford the maximum possible degree of co-ordination, the three Services were again brought into one departmental organization in 1946.

In 1947, the Defence Research Board was formed to carry out research projects for defence. It is responsible to the Minister of National Defence for this function and for advising him on the effect of scientific, technical and other research on national defence.

Department of National Health and Welfare.—The Department of National Health and Welfare was established in October 1944. Under the Minister of National Health and Welfare, the Department, which is composed of three branches (Health, Welfare and Administration), is administered through two Deputy Ministers.

The Health Branch is divided into three directorates—Health Insurance Studies, Food and Drugs, and Indian Health Services. It has 14 Divisions active in certain public health fields divided into three main groups—Medical Advisory, Research Development, and Environmental Health, each of which is headed by a Principal Medical Officer.

The Welfare Branch is made up of the Divisions of Family Allowances, Old Age Security, Old Age Assistance and Physical Fitness. The Department is also responsible for federal civil-defence planning, with the Civil Defence Co-ordinator reporting to both Deputy Ministers. The Administration Branch includes divisions where activities cover both health and welfare fields, such as research, information, legal and library services, as well as administrative, personnel and purchasing and supply services.

National Library.—The National Library Act, proclaimed Jan. 1, 1953, brought the National Library into being. Though at an early stage of organization, the Library publishes *Canadiana*—a monthly catalogue of new publications relating to Canada—and is well advanced on a national union catalogue to serve as a key to the contents of all important libraries in Canada. The National Librarian reports to the Minister of Citizenship and Immigration.

National Museum of Canada.—The National Museum illustrates the natural history of Canada — its geology, biology and anthropology. It was formerly part of the Geological Survey, founded in 1842, but was separated from it in 1920, and is now part of the Department of Northern Affairs and National Resources. The Museum carries out field investigations in botany, zoology, vertebrate palæontology, archæology and ethnology including studies of folk-lore and folk-songs, publishes the results of its research and carries out an extensive educational program.

The Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921, the name was changed to the Department of Customs and Excise. In April 1924, collection of income taxes was placed under the Minister of National Revenue and under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Department is responsible for the assessment and collection of customs and excise duty, taxes and revenues and other services by ports and outports, as well as for the assessment and collection of income taxes and succession duties.

The Minister of National Revenue is responsible to Parliament for the Income Tax Appeal Board and the Canadian Broadcasting Corporation.

Department of Northern Affairs and National Resources.—The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to Administration Services, which unit performs auxiliary functions, the Department is divided into five branches: the National Parks Branch administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government, and has charge of the National Museum of Canada; the Engineering and Water Resources Branch is responsible for the investigation of water-power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interests in certain joint federal-provincial construction projects; the Northern Administration and Lands Branch is responsible for the administration of various Federal Acts, Territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in these Territories, and for Eskimo affairs, as well as for certain lands and mineral rights in the provinces vested in the Crown in the right of Canada; the Forestry Branch conducts investigations in the protection and utilization of the forest resources of Canada, maintains forest experiment stations and forest products laboratories and administers federal assistance to the provinces under the Canada Forestry Act; and the Canadian Government Travel Bureau promotes the tourist industry by encouraging tourist travel from abroad and interprovincial travel in Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Eastern Rockies Forest Conservation Board, the Northwest Territories Power Commission, the National Battlefields Commission, the Historic Sites and Monuments Board, and the Advisory Board on Wildlife Protection. The Deputy Minister is Commissioner of the Northwest Territories.

Post Office Department.—Administration and operation of the Postal Service under the Postmaster General include: supervision of all phases of postal activity including personnel, mail handling, postal accommodation, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Public Archives.—The Public Archives was founded in 1872 and is administered by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Minister of Citizenship and Immigration. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed upon official records of the Government, and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs.

Department of Public Printing and Stationery.—This Department was established in 1886 and is in the charge of the Queen's Printer and Controller of Stationery.

The Department is responsible for supplying all requirements of printing and stationery to Parliament and Departments of the Canadian Government; the free distribution and sale of all public documents or papers to the public; the publication of the *Statutes of Canada*, the *Canada Gazette*, and all departmental reports, papers, etc., required to be published by authority of the Governor General in Council.

The Department of Public Printing and Stationery is under the jurisdiction of the Secretary of State.

Department of Public Works.—This Department was constituted in 1867 and is responsible for the management, charge and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. The Department maintains architectural and engineering staffs in each province in addition to the Administrative, Architectural, Engineering and Purchasing and Stores Branches at Ottawa.

The Minister of Public Works is responsible to Parliament for the Central Mortgage and Housing Corporation and for federal interests in the Trans-Canada Highway.

Department of the Secretary of State.—The Department of the Secretary of State was constituted in its present form in 1873. The Secretary of State is the official spokesman of the Federal Government as well as the medium of communication between the Federal and Provincial Governments, all correspondence between the Governments being conducted through his Department with the Lieutenant-Governors. He is the custodian of the Great Seal of Canada and the Privy Seal of the Governor General as well as being the channel through which the general public may approach the Crown.

The Secretary of State is the Registrar General of Canada, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and certain instruments issued under the Privy Seal. He is responsible for the collection and tabling of parliamentary returns.

The Secretary of State also deals with the organization and administration of the Office of the Custodian of Enemy Property. The Civil Service Commission, the Department of Public Printing and Stationery and the Chief Electoral Officer are under the jurisdiction of the Secretary of State, but each of the three Civil Service Commissioners, the Queen's Printer and the Chief Electoral Officer has the rank of Deputy Minister.

The Department of the Secretary of State deals with correspondence concerning the Copyright Appeal Board, the Awards Co-ordination Committee, the Public Records Committee and the Inter-departmental Committee on the use of Parliament Hill. The Special Division deals with domestic protocol, government hospitality and related matters.

Department of Trade and Commerce.—The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Prior to its creation, assistance in the development of Canada's foreign trade was provided by five Canadian Commercial Agents, who served on a part-time basis and were responsible to the Minister of Finance. On Jan. 1, 1895, a Canadian Commercial Agent was appointed at Sydney, Australia, on a full-time basis. He thus became the first Canadian Government Trade Commissioner, in the present meaning of the term.

The Canadian Commercial Agency Service was renamed the Canadian Trade Commissioner Service in 1907, as the term agent created the impression that an officer so designated had something to buy or sell. Officers devoting all their time to the promotion of Canadian trade, and on salary, were thus termed Canadian Trade Commissioners, while those receiving an honorarium were still known as Commercial Agents. The following year, the position of Superintendent of Commercial Agencies was abolished, and a Deputy Minister of Trade and Commerce was appointed on Aug. 1, 1908. Forty-nine offices in 41 countries were maintained in 1953. In addition to trade commissioners and assistant trade commissioners, the foreign service officers included nine agricultural specialists, three fisheries specialists and one timber specialist. Where trade commissioners are members of a mission maintained by the Department of External Affairs, they are given diplomatic status and are known as Commercial Counsellors or Commercial Secretaries.

The Department of Trade and Commerce was expanded in 1945 to provide a wide range of additional services to Canadian businessmen, and now comprises the following Branches and Divisions: Canadian Trade Commissioner Service, Commodities Branch, Agriculture and Fisheries Branch, International Trade Relations Branch, Canadian Government Exhibition Commission, International Economic and Technical Co-operation Division (responsible for administration of the Colombo Plan), Information Branch, Industrial Development Division, Standards Branch and Economics Branch.

The following boards, commissions, Crown companies and agencies report to Parliament through the Minister of Trade and Commerce: Atomic Energy Control Board, Atomic Energy of Canada Limited, Board of Grain Commissioners, Canadian Patents and Development Limited, Canadian Wheat Board, Export Credits Insurance Corporation, National Research Council and Trans-Canada Air Lines.

The Department of Transport.—The Department of Transport was created on Nov. 2, 1936, from the former Department of Marine, Railways and Canals and the Civil Aviation Branch of the Department of National Defence.

The work of the Department consists of four main Services: Marine, Air, Canals and Railways. The work of the Marine Service includes aids to navigation, nautical and pilotage services, marine agencies, steamship inspection and floating equipment and direct supervision over 300 public harbours; seven other harbours come under supervision of the Department but are administered by Commissions. Air Services cover the operation of civil aviation, meteorological and telecommunication divisions. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and communication by wire and by government telegraph and telephone. The Canal Service has jurisdiction over the canals and canalized waterways of Canada. These include the main or primary canals on the St. Lawrence River and Great Lakes and a number of subsidiary or secondary canals.

Other services of the Department are in connection with the Government-owned companies: the Canadian National Railways, Hudson Bay Railway, Canadian Government Railway, Canadian National (West Indies) Steamship Service and the Prince Edward Island Ferry and Terminals.

The Minister of Transport is responsible to Parliament for the following boards and commissions: the Air Transport Board; Board of Transport Commissioners; Canadian Maritime Commission; Steamship Inspection Board; National Harbours Board; Park Steamship Company Limited; and Canadian National Railway Securities Trust. The Minister is responsible to Parliament for the Canadian Overseas Telecommunication Corporation. The St. Lawrence Seaway Authority reports to Parliament through the Minister of Transport. (*See* Appendix).

Department of Veterans Affairs.—This Department, established in 1944, is concerned exclusively with the welfare of veterans and includes medical, dental and welfare services, land settlement and prosthetic services and insurance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Minister of Veterans Affairs is also responsible for the Canadian Pension Commission and the War Veterans Allowance Board. The Department has administrative offices in all the larger cities across Canada and at London, England.

Section 2.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but, in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulæ of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purpose and sets forth its powers and responsibilities. However, during World War II, the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial companies Act, to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation, some 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946, the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment, the financial provisions of the Government Companies Operation Act, which were covered by similar provisions in the new Act, were repealed.

One of the more interesting features of the new legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable through a Minister to Parliament for the conduct of its affairs and establishes three classes of corporation: departmental, agency, and proprietary.

---

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, because of the special nature of their functions, are excluded from the operations of the Crown Corporations Part of the Act and are governed by their own Acts of incorporation, as are such joint enterprises of the Federal and Provincial Governments as the Eastern Rockies Forest Conservation Board and the Halifax Relief Commission.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:—

Agricultural Prices Support Board
Atomic Energy Control Board
Canadian Maritime Commission
Director of Soldier Settlement
The Director, The Veterans' Land Act
Dominion Coal Board
Fisheries Prices Support Board
National Gallery of Canada
National Research Council
Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis, or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. Schedule C to the Financial Administration Act lists the following as agency corporations:—

Canadian Arsenals Limited
Canadian Commercial Corporation
Canadian Patents and Development Limited
Canadian Sugar Stabilization Corporation Limited
Commodity Prices Stabilization Corporation Limited
Crown Assets Disposal Corporation
Defence Construction (1951) Limited
Federal District Commission
National Battlefields Commission
National Harbours Board
Park Steamship Company Limited.

Since the proclamation of the Financial Administration Act, Atomic Energy of Canada Limited has been added to the agency grouping, and two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, have discontinued operations and have surrendered their charters.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without Parliamentary appropriations. Twelve such corporations are listed in Schedule D to the Act:—

Canadian Broadcasting Corporation
Canadian Farm Loan Board
Canadian National (West Indies) Steamships Limited
Canadian Overseas Telecommunication Corporation
Central Mortgage and Housing Corporation
Eldorado Mining and Refining Limited
Export Credits Insurance Corporation
National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
Northern Transportation Company Limited
Northwest Territories Power Commission
Polymer Corporation Limited
Trans-Canada Air Lines.

Eldorado Aviation Limited, a subsidiary of the Eldorado Mining and Refining Limited, was incorporated as a private company pursuant to the provisions of Part I of the Companies Act on Apr. 23, 1953, and was subsequently added to Schedule D as a proprietary corporation by the Governor in Council pursuant to Sect. 76 of the Financial Administration Act. The St. Lawrence Seaway Authority (*see* Appendix) is also a proprietary corporation.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act, although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds either to the Government or the public. In a few instances, corporations have financed all or a portion of their requirements from their own resources or earnings. A special financing arrangement recently adopted has been the allocation of the 15-p.c. excise tax charged on radio and television sets and their parts and accessories to the revenue of the Canadian Broadcasting Corporation.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay such taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. In a number of cases, further details are included in the Chapters dealing with the subjects concerned (*see* Index).

Agricultural Prices Support Board.—The Board was established in 1944 to assist in stabilizing the prices of agricultural products. The Board reports to Parliament through the Minister of Agriculture.

Atomic Energy Control Board.—In December 1946, by Act of Parliament, all matters concerning atomic energy in Canada were placed under the Atomic Energy Control Board. From Feb. 1, 1947, to Apr. 1, 1952, the National Research Council operated the Chalk River project as an agent of the Board. The Board reports to Parliament through the Minister of Trade and Commerce.

Atomic Energy of Canada Limited.—This Crown Company was incorporated in February 1952 under the Atomic Energy Control Act, 1946, to take over from the National Research Council on Apr. 1, 1952, the operation of the Chalk River project on behalf of the Atomic Energy Control Board. The main functions of the Company are the operation of atomic reactors, research into many aspects of atomic energy and the extraction, processing and marketing of the by-products of the reactors. The Board reports to Parliament through the Minister of Trade and Commerce.

Bank of Canada.—Legislation of 1934 (R.S.C. 1952, c. 13), provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank is governed by its own Act of incorporation. (*See* footnote, p. 98.)

Board of Grain Commissioners.—Under the Canada Grain Act 1930 (R.S.C. 1952, c. 25), the Board of Grain Commissioners for Canada, comprising a Chief Commissioner, two Commissioners and three Assistant Grain Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Trade and Commerce.

Canadian Arsenals Limited.—This Company was set up in September 1945 to take over Crown-owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radars and a wide range of ammunition and components. Its Divisions, together with the location of their plants, are as follows: Dominion Arsenal Division (Quebec, Valcartier and Rivière-du-Loup, Que.); Explosives Division (Valleyfield and Shawinigan Falls, Que., and storage depot at St. Dominique, Que.); Filling Division (St. Paul l'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Radar Division (Scarborough, Ont.). The Company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.—Legislation passed in 1936 (R.S.C. 1952, c. 32), provides that there shall be a corporation, to be known as the Canadian Broadcasting Corporation, which shall consist of a Board of 11 Governors appointed by the Governor in Council and chosen to give representation to the principal geographic divisions of Canada. The Board of Governors determines CBC policy, and the Chairman of the Board is required to devote the whole of his time to the performance of his duties under the Act.

The General Manager is the Chief Executive of the Corporation and directs the operations and activities of the Corporation as well as the application of CBC policy as determined by the Board of Governors. The organization of the CBC consists of the following principal Divisions: Program, International Service, Engineering, Commercial, Press and Information, Broadcast Regulations, Station Relations, Personnel and Administration, and Treasury. Regional Representatives are appointed for Newfoundland, the Maritimes, Quebec, Ontario, the Prairies, and British Columbia.

The Corporation reports to a Minister of the Crown (at present the Minister of National Revenue) who is responsible for dealing with CBC operations when these are under consideration in Parliament.

Canadian Commercial Corporation.—The Canadian Commercial Corporation, established on May 1, 1946, acts as purchasing agent for foreign governments seeking defence supplies in Canada. It also acts as purchasing agent for international agencies such as the United Nations International Children's Emergency Fund and the United Nations Korean Reconstruction Agency. Other functions include arranging production and shipment of Canadian contributions of military stores to NATO countries. The Corporation also serves other departments of the Government of Canada. For instance, it arranges for the purchase and production of supplies and services which the Department of Trade and Commerce is making available to other countries under the Colombo Plan. In carrying out its functions, the Corporation works closely with the Departments of Trade and Commerce and Defence Production. It is responsible to Parliament through the Minister of Defence Production.

Canadian Farm Loan Board.—The Board was organized in 1929 to make loans to farmers secured by mortgage. Later operations extended loans to fishermen secured by mortgage on real estate. The Board is responsible to Parliament through the Minister of Finance.

Canadian Maritime Commission.—The Commission was created in 1947 (R.S.C. 1952, c. 38) to consider and recommend policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry. The Commission is responsible to Parliament through the Minister of Transport.

Canadian National Railways.—Operating under an Act to incorporate the Canadian National Railway Company (1919), brought into effect by Order in Council of Jan. 30, 1923, the Canadian National Railways comprised at that time the old Intercolonial Railway and various eastern branch lines (all embraced in the Canadian Government Railways which were turned over to the Canadian National board for management and operation), the Canadian Northern Railway (1918) and the Grand Trunk Pacific (1923). The Hudson Bay Railway has been operated by the Canadian National Railways for the Canadian Government since 1935 and a separate accounting is made. Additional lines have been built or acquired and are operated by the Canadian National Railways. The Newfoundland Railway was entrusted to the Canadian National Railway Company in 1949 for operation and management. The CNR is controlled by a Chairman and Board of Directors and is responsible to Parliament through the Minister of Transport.

Canadian National (West Indies) Steamships Limited.—Through the medium of this Crown Company, the Federal Government provides direct steamship services to the West Indies in conformity with the Canada-West Indies Trade Agreement of 1926. The Company is responsible to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown Company was created on Dec. 10, 1949, by Act of Parliament (R.S.C. 1952, c. 42) to acquire for public operation all external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement, signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Incorporated under an amendment to the Research Council Act, passed in 1946, the primary purpose of Canadian Patents and Development Limited is to make available to industry, through licensing arrangements, the inventions and new processes developed by the scientific workers of the National Research Council. Their services are also available to other Government Departments, publicly supported institutions and universities. The Board of Directors is composed of representatives from industry, from the universities, and from the National Research Council.

The Canadian Wheat Board.—The Board was incorporated under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board cannot buy grain other than wheat, but since Aug. 1, 1949, the Board has been directed to buy oats and barley also. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. (*See* footnote, p. 98.)

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament in 1945 to administer the National Housing Act, 1944, and earlier housing Acts, to provide facilities for the rediscounting of mortgages for lending institutions and to co-ordinate activities of the Federal Government in the housing field. Since 1950, the Corporation has provided management and supervisory services to Defence Construction Limited which is entrusted with carrying out the construction of defence projects required by the Department of National Defence. The Corporation is responsible to Parliament through the Minister of Public Works.

Crown Assets Disposal Corporation.—By statute, War Assets Corporation was established in June 1944, replacing War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.—This Company was set up in 1951 to carry out all defence construction, with the exception of housing and aeroplane runways. It replaced the former Crown Company, Defence Construction Limited, which was set up in November 1950. The Company reports to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in either capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, created in 1947 under the Dominion Coal Board Act (R.S.C. 1952, c. 86), is charged with the duty of studying and recommending to the Government policies respecting the production, importation, distribution and use of coal in Canada. It also administers transportation subventions, other subsidies relating to coal and loans authorized under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 170).

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act, which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that area of the eastern slope of the Rocky Mountains which forms part of the watershed of the Saskatchewan River. The function of the Board is to plan, supervise and undertake construction, operation and maintenance of projects and facilities necessary for the proper protection of the forests of the area to obtain the greatest possible flow of water in the Saskatchewan River and its tributaries.

During the first seven years of the agreement the Federal Government has undertaken to provide $6,300,000 for capital expenditure and Alberta to provide funds for maintenance expenditures. During the period of capital expenditure the Federal Government appoints the Chairman and one member and the Province one member. After the capital period the Federal Government appoints one member, the Government of Alberta appoints two and names one of the three as Chairman. (*See* footnote, p. 98.)

Eldorado Aviation Limited.—Incorporated Apr. 23, 1953, to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited, the Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the name was changed in June 1952) the Company's business is that of prospecting for, mining and refining uranium ores in Canada. It reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Export Credits Insurance Corporation.—This Company commenced operations in 1945, under the Export Credits Insurance Act, 1944, and comprises a Board of Directors (including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada) and an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation reports to Parliament through the Minister of Trade and Commerce.

Federal District Commission.—This Commission had its genesis in the Ottawa Improvement Commission, established by Parliament in 1899 to improve and beautify the National Capital by the development and construction of parks and driveways and to co-operate with the City of Ottawa in local improvement and conservation. Its membership is honorary in character and is appointed by the Governor in Council, and it reports to the Prime Minister. In 1927, the organization's name was changed to the Federal District Commission, its scope of operations widened to include adjacent areas, and its membership increased to ten. Under the FDC Act, the mayors of Ottawa and Hull are included in its membership.

The Commission maintains the grounds of all federal buildings in the National Capital areas and landscapes the grounds of new government buildings. In the Ottawa-Hull area (exclusive of Gatineau Park), where it administers 1,878 acres, it has developed 18 parks and 22 miles of scenic driveways.

In 1946 the Commission became the federal agency responsible for carrying out the National Capital Plan. The membership was further increased to permit the appointment of a commissioner resident in each of the provinces and a separate honorary committee was established by the Commission to advise on the development of Gatineau Park. The National Capital Fund, to which Parliament has made annual grants of $2,500,000 since its inception in 1948, was made available to the Commission to execute the work of the National Capital Plan, and a National Capital Planning Committee was appointed to act as a permanent honorary advisory body to the Commission on the implementation of the Plan.

Fisheries Prices Support Board.—The Board was set up in July 1947 to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of an Acting Chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them, or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Halifax Relief Commission.—The Commission, a joint enterprise of the Legislature of Nova Scotia (Statutes of N.S., 1918, c. 61) and the Parliament of Canada (Statutes of Canada, 1918, c. 24), was incorporated to administer relief funds contributed for the assistance of sufferers in consequence of the disastrous explosion at Halifax, Dec. 17, 1917. (*See* footnote, p. 98.)

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (*See* footnote, p. 98.)

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven being appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Film Board.—The National Film Board was established in 1939 and the National Film Act (R.S.C. 1952, c. 185), provides for a Board of Governors of nine members —a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through a designated Minister of the Crown (at present the Minister of Citizenship and Immigration). The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

National Gallery.—The National Gallery was founded in 1880. By Act of Parliament in 1913 and re-enacted in 1951, it was placed under the management of a Board of Trustees appointed by the Governor General in Council, and is responsible to Parliament through a Minister of the Crown (at present the Minister of Citizenship and Immigration).

The first charge of the National Gallery is the development and care of the national art collections. Other important services are the arrangement of loans and exhibitions from abroad and from its own holdings for showing in Canada and abroad, the promotion of good industrial design, and general extension work consisting of the distribution of reproductions for educational purposes, lectures, educational tours, publications, school broadcasts and art films.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill. The Board is responsible to Parliament through the Minister of Transport.

National Research Council.—In 1917, the Research Council Act was passed and in 1928, laboratories for scientific research were established at Ottawa. The National Research Council now has divisions of pure and applied chemistry, building research, mechanical engineering, radio and electrical engineering, physics, applied biology and medical research. Regional laboratories have been established at Saskatoon, Sask., and Halifax, N.S.

Patentable processes and improvements developed by the Council are made available under licence to industry through a Crown company, Canadian Patents and Development Limited (*see* p. 102), and any profits from the licensing arrangements are used for further research and development.

The Minister of Trade and Commerce, as Chairman of the Privy Council Committee on Scientific and Industrial Research, is responsible to Parliament for the National Research Council.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the name being changed in 1952. Previously a company chartered under an Alberta Statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established, and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Northwest Territories Power Commission.—The Commission was established by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. The Act was amended in 1950 to give authority to the Commission to provide similar services in the Yukon Territory. The Commission is composed of a Chairman and two members appointed by the Governor in Council; it operates hydro-electric plants on the Snare River in the Northwest Territories and on the Mayo River in Yukon Territory and a diesel electric plant at Fort Smith, N.W.T. The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Park Steamship Company Limited.—After World War II, this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of Government war-built ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (*see* p. 101). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—The Corporation was established in 1942 for the purpose of constructing and operating a synthetic rubber plant, which now produces a variety of synthetic rubber products. The plant is located at Sarnia, Ont. The Corporation reports to Parliament through the Minister of Defence Production.

St. Lawrence Seaway Authority (*See* Appendix).

Trans-Canada Air Lines.—TCA came into being by Act of Parliament in 1937 to provide for the development of a government-controlled scheduled transcontinental air service. Transatlantic air services, which were inaugurated by the Department of Transport during World War II, were later turned over to TCA. TCA now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, Mexico, England, Scotland, Ireland, France, West Germany, Bermuda, the Bahamas, Jamaica, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Trade and Commerce.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940, under the provisions of the Unemployment Insurance Act, 1940, for the purpose of administering the Act. It is composed of three Commissioners: a Chief Commissioner, a Commissioner appointed after consultation with organizations representative of workers, and another after consultation with organizations representative of employers. The Chief Commissioner holds office for ten years and each of the other Commissioners for five years. The Board is responsible to Parliament through the Minister of Labour.

Section 3.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—*Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to $1·50 per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.*

PART IV.—FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.*—The Federal Civil Service comprises, in the widest sense, all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively, they form the staffs of the various departments, commissions, boards, bureaux and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service. A few civil servants are appointed by one or both Houses of Parliament directly, a considerable number by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council, and the remainder—by far the majority—are selected and appointed by the Civil Service Commission of Canada.

The Civil Service Commission, as the central personnel agency of the Federal Government, is the custodian of the merit principle in respect of both initial appointments and promotions. The steps by which the Commission, in its present form, came to be constituted is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918.

Recruitment.—The recruitment of civil servants is conducted by means of open competitive examination through which every citizen has the right to compete for positions in the service of his country.

Examinations are held periodically as the staff requirements of the public service dictate. Any Canadian citizen may apply for headquarters positions open at Ottawa, but applicants for local positions must be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, public libraries and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

---

* Revised by M. M. Maclean, Secretary of the Civil Service Commission of Canada, Ottawa.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. As required, appointments are made from the eligible lists, which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the 'veteran's preference'. Actually, the preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World War I or II or in the Korean theatre of operations. The highest order of preference is the 'disability preference' accorded to pensioners of the Armed Forces who, as a result of their war service, are unable to re-establish themselves in a civilian occupation.

In recent years, the Civil Service Commission has decentralized its operations and now has ten district offices and four sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit more efficient service to field agencies. They now conduct certain examinations that qualify for permanent as well as temporary employment.

Staff Training.—In 1947, the Commission set up a Staff Training Division to promote and guide a systematic service-wide training scheme. The training scheme, sponsored by the Commission, is a joint venture undertaken in co-operation with Federal Government departments, most of which have parallel training divisions. The Commission's Training Division is primarily a co-ordinating agent. It promotes and organizes activities, trains departmental instructors in the presentation of courses, prepares and, in some cases, gives courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs, and acts as a general clearing-house for the exchange of information on training matters.

Promotion.—It is a prime objective of the Civil Service Act to create a career service. The result is that promotion, like entrance to the Service, is based on merit and a sound promotion system is developing. The present procedure involves the consideration of three factors: seniority or length of service; efficiency of candidates in their present positions; and fitness for the vacant positions. An automatic rating on seniority is given by the Commission and ratings on efficiency and fitness are provided by the department concerned. Appeal machinery, under Commission jurisdiction, has been set up for those employees who feel that their qualifications have not been properly assessed.

Position Classification and Compensation.—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position-classification was instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of similar kind are grouped together under a common title to form a class, and grades within the class reflect the level of responsibility.

The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position classification is a mainspring in the Commission's primary function of recruitment, involving the fixing of standards of qualification for each class of position.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In 1948, the Commission set up an Organization and Methods Service to study problems of management in collaboration with officials directly responsible for major areas of administration. Briefly, this Service affords practical assistance to departments and other agencies of the Government through the systematic examination of structure, operations, procedures and work methods. Its growing facilities are offered, free of charge, to all departments.

Statistics of Federal Government Employment.*—Presented here are the first data of a new survey of Federal Government employment commencing April 1952.

The basic concept behind the survey was that it should comprehend all classes of employees (excluding members of the Armed Services but including Force members of the Royal Canadian Mounted Police) for the totality of services at the federal level of government, with separate treatment accorded those activities designated as "government enterprises" because of the economic or proprietary nature of their undertakings; hence the title "Federal Government Employment", in contrast to the title used for the previous survey "Civil Service of Canada" with its restrictions as to services and classes of employees. The guiding principle that has been followed in matters of terminology and presentation of data has been strict adherence, except in dealing with services of relatively minor import, to official usages as employed in the Canada *Estimates* and, in classification of employees, to the official designations "classified", "exempt" and "statutory". Comparison with figures of previous years should be made only after careful consideration of the differences in composition of services and classification of employees. These points are more fully elaborated in the *Explanatory Memorandum.*†

Included in this survey as governmental services are all the administrative functions of the Federal Government (*see* pp. 92-98), and all agencies, boards and commissions where the nature of the undertaking is not of a proprietary or economic character, but where payments of salaries and/or wages are by legislative appropriation from the General Revenue Fund, including two Agency Corporations (Federal District Commission and National Battlefields Commission) and one Proprietary Corporation (Canadian Farm Loan Board). Statutory employees are also included since salaries of these are paid from the General Revenue Fund in accordance with the terms of an Act of Parliament establishing the position.

---

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† Special report, available from DBS on request.

The "classified" group embraces several classes of employees including: those who are subject to the Civil Service Act and Civil Service Superannuation Act; those not subject to these Acts but who are employed under other enabling legislation or regulations; those employees of certain Agency and Proprietary Corporations mentioned above; and the "statutory" group, most of whom are only dismissable by an Address to both Houses of Parliament, such as members of the judiciary. The other main group, denominated "exempt", is also a composite of groups of employees (prevailing rate, casual, ships' crews), the chief distinctions of which are that, though paid from revenues passed by legislative appropriation, there is not the same security of tenure, the rates paid are determined by those prevailing in the area of work, and the employment of these groups is often seasonal. Moreover, these classes are not subject to the Civil Service Enactments for the purposes of classification and wages.

Employment of government "enterprises" is treated separately from that of government "services" because of the economic or proprietary complexion of the former activity. The supposition in respect of enterprises is that costs of operation, among them salaries and wages, are paid from the revenues which the undertaking has derived from the activity in which it is engaged. There is in these instances no such thing as a parliamentary appropriation to cover payment of salaries and wages; the accounts of such activities are separate and distinct from those for which the Auditor General is responsible but there exists in all instances ministerial responsibility to Parliament. The activities falling in the category "enterprises" are listed as follows:—

Atomic Energy of Canada Limited
Bank of Canada
Canadian Arsenals Limited
Canadian Broadcasting Corporation
Canadian National Railways
Canadian National (West Indies) Steamships Limited
Canadian Overseas Telecommunication Corporation
Canadian Wheat Board
Central Mortgage and Housing Corporation
Crown Assets Disposal Corporation
Canadian Commercial Corporation
Defence Construction Limited
Eldorado Mining and Refining Limited
Export Credits Insurance Corporation
Hudson Bay Railway
Industrial Development Bank
National Harbours Board
Northern Transportation Company Limited
Northwest Territories Power Commission
Polymer Corporation Limited
Prince Edward Island Car Ferry
Trans-Canada Air Lines

The figures pertaining to this group (Table 4) are published in aggregate only, in order to preclude (as required under the Statistics Act) any possibility of disclosure as to the operation of a particular enterprise.

PART V.—CANADA'S EXTERNAL RELATIONS

The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104.

Section 1.—Diplomatic Representation as at July 31, 1954

NOTE.—For changes in this listing subsequent to July 31, 1954, *see*, *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published quarterly and obtainable from the Queen's Printer, Ottawa. Price, 25 cents.

1.—Canadian Representation Abroad

Country and Year Representation Established	Present Status of Representative	Address	Present Representative	Date Letter of Credence Presented
Argentina........1941	Ambassador........	Bartolome Mitre, 478, Buenos Aires.	MAJOR - GENERAL THE HON. L. R. LAFLÈCHE, D.S.O.	Aug. 19, 1952
Australia........1939	High Commissioner	State Circle, Canberra..	MR. W. A. IRWIN.......	Aug. 7, 1953
Austria..........1952	Minister............	Strauchgasse 1, Vienna..	MR. GEORGE L. MAGANN	(nominated)
Belgium.........1939	Ambassador........	35, rue de la Science, Brussels.	MR. CHARLES PIERRE HÉBERT.	Jan. 14, 1954
Brazil...........1941	Ambassador........	Avenida President Wilson, 165, Rio de Janeiro.	MR. SYDNEY D. PIERCE, O.B.E.	Oct. 27, 1953
Ceylon..........1953	High Commissioner	6 Gregory's Road, Cinnamon Gardens, Colombo.	MR. J. J. HURLEY, O.B.E., E.D.	Aug. 5, 1953
Chile............1942	Ambassador........	Avenida General Bulnes 129, Santiago.	MR. LEON MAYRAND....	May 17, 1951
Colombia........1953	Ambassador........	Rm. 613 Edificio Faux, Avenida Jimenez de Quesada 7-25, Bogota.	MR. E. TURCOTTE.......	Apr. 7, 1953
Cuba............1945	Ambassador........	Edificio Ambar Motors, Avenida Menocal No. 16, Havana.	MR. H. A. SCOTT........	Jan. 15, 1952

Section 2.—International Activities*

Subsection 1.—Canada and Commonwealth Relations, 1953-54†

One of the most important of Commonwealth relations, that of almost continuous consultation between Commonwealth countries on international issues, continued in many forms throughout 1953. The exchanges of views that are conducted with the minimum of formality and organization, although unspectacular, are an invaluable and vital part of Commonwealth relations.

The flexible nature of the constitutional arrangements between member countries and the continuous process of evolution to which they are subject was manifested in a change in the Royal Style and Titles. It had been agreed at a meeting of Commonwealth Prime Ministers at London in December 1952 that Her Majesty's title, though retaining a common element, might vary according to the country concerned. The Title adopted by Canada was embodied in a Statute passed by the Parliament of Canada in February 1953, which was presented to Her Majesty for approval and signature on May 28. For Canada, the Royal Style and Title is now "Elizabeth the Second, by the grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith". The Canadian Proclamation was simultaneous with the Proclamations by the other Commonwealth countries. The common element of the new titles is the recognition of the Queen as Head of the Commonwealth. This is symbolic of the common history, ideals and interests which bind the countries of the Commonwealth together as a free association of independent member nations.

---

* Prepared by the Department of External Affairs, Ottawa.

† Brought up to Mar. 31, 1954. Refer to the 1954 Year Book, pp. 103–107, for activities up to May 31, 1953.

The Coronation of Queen Elizabeth II, which brought together representatives of the Parliaments and Legislatures of the Commonwealth from all over the world, provided a striking occasion for the demonstration of the strength of that feeling which binds together the diverse nations and peoples of the Commonwealth. The Canadian delegation to the Coronation included the Prime Minister and other Cabinet Ministers, Leaders of the Opposition in the House of Commons and the Senate, Speakers of the Senate and the House of Commons, the Chief Justice, and representatives of Canadian ex-servicemen's organizations. Arrangements for the Coronation were co-ordinated by the Coronation Commission, consisting of representatives of Commonwealth countries meeting at London. In Canada, the Government was advised by the Coronation Committee of Canada on all Coronation matters of special concern to this country. At posts abroad, Canadian diplomatic and consular representatives united with their colleagues from other Commonwealth nations in arranging celebrations.

Following the Coronation, Commonwealth Prime Ministers held a series of meetings at which they reviewed the international situation and held informal talks on matters of particular interest to two or more countries. The communique issued at the end of the meetings stated: "The discussions which the Prime Ministers have held have once more demonstrated the concord which exists between all the Governments and peoples of the Commonwealth, despite their varying interests and circumstances, in their approach to problems of the world today."

These meetings continued a long series of exchanges that have taken place through the years. Previous meetings had discussed such important matters as peace settlements, developments in China and Korea, and economic problems.

One outstanding example of practical Commonwealth co-operation continued in Korea, where the Commonwealth Division, consisting of combat forces from the United Kingdom, Canada, Australia and New Zealand, and a medical unit from India, which had acquitted itself with distinction, was maintained on guard after the Armistice of July 27, 1953. The nations of the Commonwealth, like many other members of the United Nations, have been concerned over the destruction of life and property in Korea, and are contributing to its relief and rehabilitation.

In respect of economic matters, although difficulties caused by the shortage of raw materials abated, other problems persisted. The most important continued to be the financial difficulties of the Sterling Area, which raised urgent questions for all members of the Commonwealth, not excepting Canada, the only non-sterling member. At a meeting of Commonwealth Finance Ministers held at London in January 1952, measures to meet the situation were discussed and important steps were later initiated by the countries concerned to arrest further deterioration in their own positions. In November of that year, the Prime Ministers of the Commonwealth countries reviewed the position and produced a plan for a collective approach to freer trade and payments. Their proposals were later discussed with the United States and Western European Governments. During the period under review, substantial progress in the position of the Sterling Area was achieved. Progress is reflected in an improvement in the balance of payments, the expansion of trade, and an expansion of development schemes. In January 1954, Commonwealth Finance Ministers meeting at Sydney, Australia, reviewed the existing position in the light of these developments and re-affirmed their faith in the collective approach to freer trade and payments.

A continuing and deep-rooted economic problem arises out of the backward agricultural and industrial condition of many countries of southeast Asia. It was realized that, if ignored, this condition, worsened by the destruction and impoverishment in that area during World War II, would undermine the promise that these countries achieve a healthy and continuous development along democratic lines. The 1950 Colombo Conference, therefore, urged the necessity of the more industrially advanced countries giving assistance to the nations of that area, and fashioned the Colombo Plan, which continues to play an active part as one of the most promising contributions towards building up the free world and enabling it to stand against totalitarianism.

International tension, besides adversely affecting the world's economic development during recent years, has also made it necessary to devote to strengthening the defences of Commonwealth countries resources that would normally have been used to increase trade and prosperity. The world-wide distribution of the Commonwealth countries has made essential the organization of their defences on a regional basis providing for full co-operation with friendly foreign countries. For example, Canada and the United Kingdom, as members of the North Atlantic Treaty Organization, have continued to work together in co-operation with the other members of NATO.

Commonwealth co-operative arrangements also exist in other fields. Canada is represented on such standing groups as: the Executive Council of the Commonwealth Agricultural Bureaux; the Commonwealth Economic Committee; the Commonwealth Shipping Committee; the Commonwealth Telecommunications Board; the Commonwealth Air Transport Council; the Commonwealth Advisory Aeronautics Research Council; the Commonwealth Liaison Committee; the Commonwealth Committee on Mineral Resources and Geology; the Imperial Institute; and the Imperial War Graves Commission. These bodies form useful means of exchanging information and views on special economic, scientific or technical questions and of working out recommendations for the consideration of the governments concerned.

Canada's first High Commissioner to Ceylon arrived at Colombo in August 1953, thus completing the nation's diplomatic representation in Commonwealth countries.

Constitutional developments in United Kingdom colonial territories attracted some attention during 1953. These included a conference at London on federation in the West Indies, the establishment of the Federation of Rhodesia and Nyasaland, and progress towards more complete self-government in Nigeria, the Gold Coast, and other colonial territories.

Despite difficulties and problems the Commonwealth association has, during the period covered by this survey, continued to serve as one of the most effective means of international discussion and co-operation, based in large measure on common traditions, similar political institutions and common ideals.

Subsection 2.—Canada and the United Nations

The most important development in the period Apr. 1, 1953 to Mar. 31, 1954, was the conclusion of a Korean Armistice on July 26, 1953. The armistice agreement was a document signed by military commanders and was intended to establish provisions of the armistice and make possible a final peace settlement. Commenting on the signing of the Armistice, the Prime Minister of Canada paid tribute to the

Armed Forces of the United Nations that had fought in Korea and recalled that a brigade of Canadian soldiers, as well as three destroyers of the Royal Canadian Navy and elements of the Royal Canadian Air Force, had been in operation since early in the fighting. He described Canada's attitude to the Korean situation as follows:—

> "When in the summer of 1950 the United Nations intervened in Korea, it did so for the sole purpose of resisting aggression against the Republic of Korea. This objective has now been achieved. An armistice drawn up in honourable terms has now been signed. It is the earnest hope of the Canadian Government that this armistice in Korea will be observed scrupulously by all concerned and will lead to a political settlement in that ravaged peninsula and eventually to a general settlement of outstanding issues in the whole of the Far East."

The Hon. L. B. Pearson, President of the seventh session of the General Assembly, announced the convening of the General Assembly to prepare for the calling of the political conference recommended in the armistice terms. This political conference was to deal with "the withdrawal of foreign forces from Korea, the peaceful settlement of the Korean question, etc.". The armistice agreement established a military demarcation line separating the two sides, and it called for the creation of a Military Armistice Commission to supervise the implementation of the agreement and of a Neutral Nations Supervisory Commission to supervise the movement of men and goods on both sides and to investigate violations.

When the Assembly met in August 1953, much of its time was devoted to a resolution sponsored by Canada, the United Kingdom, Australia and New Zealand, recommending the participation of India in the political conference. This resolution did not have sufficient support to pass at the plenary meeting stage and, at the request of India, was withdrawn. A principal resolution passed reaffirmed that "the objectives of the United Nations remained the achievement by peaceful means of a unified, independent and democratic Korea under a representative form of government and the full restoration of international peace and security in the area".

To arrange a political conference, the United States sent a number of messages to the Peking and North Korean régimes. In late October, discussions on the proposed political conference began at Panmunjom. These discussions, involving the time, place and composition of the proposed conference as well as the status of Soviet participation, were broken off on Dec. 12 over accusations made by the Communist side against the United States.

The prisoners held by the Neutral Nations Repatriation Commission were released to the United Nations Command just prior to Jan. 23, 1954, and, on that date, they were declared to be free men. India proposed that the General Assembly be reconvened to consider the Korean question but there were not sufficient member states in favour for the proposal to obtain the requisite majority. Canada notified the Secretary-General and the Indian Government that it thought reconvening of the General Assembly in the existing circumstances was inadvisable.

The next major development in the Korean question came at the conclusion of the meeting of the Foreign Ministers of the United States, the United Kingdom, France and the Soviet Union at Berlin, Germany, in mid-February. In a communique they announced that agreement had been reached on a conference opening at Geneva, Switzerland, on Apr. 26, 1954, of representatives of the Big Four, the Peking régime, the two Koreas and other countries whose armed forces had participated in the Korean conflict. At the close of the period under review, Canada had agreed to participate in this conference and general preparations were going forward.

The General Assembly, 1953-54.—Although most of the Korean developments took place outside the United Nations proper during this period, the eighth session of the General Assembly, which opened in mid-September and recessed early in December 1953, was concerned with a range of important problems. At the opening of the Assembly, the Hon. L. B. Pearson, as Chairman of the Canadian Delegation, said that the Assembly was meeting at a time when many thought that the successful negotiation of some of the outstanding differences between the two major power groupings might be possible. This possibility, he said, arose mainly from the fact that in recent years a large part of the free democratic world had learned to co-operate in purpose, policy and action for the defence of peace. As it turned out, the eighth session of the Assembly was somewhat of a transitional stage between the conclusion of a Korean armistice and whatever international relationships were to be established in its wake. It could not be said that the eighth session was marked by any basic change in Soviet attitudes. Acrimonious debate took place on several questions influenced by East-West tensions. These included: reports of Communist atrocities in Korea, the fate of World War II prisoners, and charges of bacteriological warfare and forced labour. The Assembly also considered the problems of Chinese representation, on which it postponed decision, and admission of new members on which no further decision was made.

The eighth session concerned itself also with a number of problems relating to the progress of certain areas toward self-government. A highly controversial issue in this field—and one that was much to the fore in debates on the situation in Tunisia and Morocco—was the extent to which the duty of the United Nations, under the Charter, to concern itself with questions of human rights and self-determination of peoples should have a bearing on the interpretation of Charter provisions which place domestic matters outside the Assembly's competence. Canada has long held the view that the domestic jurisdiction clause should not be so interpreted as to render meaningless other important provisions of the Charter, and that the Assembly's essential role should be to develop goodwill on both sides from which agreed solutions might be achieved.

One or more Commonwealth countries were involved in three important items on the agenda: treatment of Indians in South Africa; racial policies in South Africa, and the status of South West Africa. On the first, the Assembly reconstituted the Good Offices Commission which in the past had vainly endeavoured to arrange negotiations between the parties concerned. The Assembly's decision on racial policies involved the re-affirmation of previous resolutions concerning human rights and fundamental freedoms and the re-establishment of the Commission set up in 1952 to study this problem. On these two issues, Canada made clear its concern regarding allegations that human values were being disregarded, and joined with those seeking solutions that would be in keeping with the importance attached to human rights in the Charter and yet would not represent too broad an interpretation of the domestic jurisdiction clause.

The question of disarmament received careful attention at the Assembly. Under a resolution approved by 54 members (including Canada), with none against and only the Soviet bloc abstaining, the Disarmament Commission was asked to continue its work with a view to ending the deadlock between the Western Powers and the Union of Soviet Socialist Republics. Interest in the problem was greatly heightened at the conclusion of the eighth session by a proposal put forward by President Eisenhower that governments principally involved should make contributions of fissile materials to an international agency for peaceful purposes. In connection with this proposal, the President specifically endorsed the Assembly resolution that called for the establishment of a special sub-committee of the Disarmament Commission consisting of representatives of the powers principally involved, which would seek in private an acceptable solution to disarmament problems. The Prime Minister of Canada welcomed the President's "imaginative and constructive approach to what is perhaps the greatest problem of the day". Subsequently, the Big Four Foreign Ministers agreed at the Berlin Conference in mid-February upon a declaration to the effect that the solution of international controversies would be aided by agreement on disarmament and that an exchange of views along the lines of the General Assembly resolution should be held. Meetings for this purpose were convened some weeks later. Canada is a member of the Disarmament Commission and was also appointed to the sub-committee.

Canada shared in the Assembly decision to renew the Expanded Program of Technical Assistance to which she had given a total of $2,400,000, including a contribution of $800,000 for 1953. For 1954 a recommendation was made to Parliament that up to $1,500,000 be contributed to the Program, subject to adequate amounts being given by other countries. Attention was also given to the related problems of increasing the flow of public and private capital for financing economic development. In accordance with a suggestion put forward by the United States, member states of the United Nations, including the United Kingdom and Canada, undertook to ask their peoples, when sufficient progress had been made in internationally supervised world-wide disarmament, to devote a portion of the resulting savings to a United Nations Fund for Economic Development. Decisions were also taken about various other important programs including reconstruction work in Korea, relief and rehabilitation for Palestine refugees, welfare programs for mothers and children under the United Nations Children's Fund (which was established on a continuing basis) and the work of the United Nations High Commissioner for Refugees. To all of these, Canada has made contribution of considerable size.

The Assembly discussed possible preparations for consideration to be given in 1955 to a conference to review the United Nations Charter and instructed the Secretary-General to undertake certain tasks in this direction. Canada took the position that there might be some benefit in re-examining the Charter but that, in the present international climate, unwarranted hopes of reduction in international tensions through changes in the Charter should not be encouraged.

The Palestine Problem.—Beginning in the autumn of 1953, the Security Council was concerned with problems relating to the Palestine question. In late 1953 and early 1954, various armed clashes took place between Israel and its neighbours and feelings ran very high. There was a resulting impairment of the machinery for maintaining peaceful conditions that had been established with the signing of the armistice agreements between Israel and her individual Arab neighbours. At the end of the period under review, the Security Council had on its agenda items relating to alleged attacks, and also was considering whether or not to review the Palestine problem in general. The Security Council also gave brief attention to the Trieste question. Canada was not a member of the Security Council during this period but followed developments very closely.

Economic and Social Affairs.—Through the Economic and Social Council and its related bodies, the United Nations continued to help promote higher standards of living and to concern itself with international problems in the economic, social and health fields. Many of the issues in the fields of technical assistance, aid for refugees, child welfare and a number of others were handled initially in the Economic and Social Council and then passed to the Assembly for final decision.

In the early part of 1954, the Commission on Human Rights passed an important milestone in its work by completing the two international draft Covenants on Human Rights that had been under consideration for five years. One of the draft Covenants is on civil and political rights and the other on economic, social and cultural rights. Canada made clear in a statement on the Covenants that, "in the absence of a satisfactory federal-state clause, Canada could not become a party to the Covenants owing to the nature of its Constitution which divides legislative powers concerning human rights between the national parliament and the provincial legislatures". The possibility existed, however, that the next session of the General Assembly would decide to include a reservations clause in the Covenants.

Specialized Agencies.—Closely linked with the work of the Economic and Social Council in the Technical Assistance Program and in other fields have been the undertakings of the ten Specialized Agencies. These are separate intergovernmental bodies that work in close harmony with the United Nations. Canada has ratified the Convention for an Intergovernmental Maritime Consultative Organization (IMCO) which will concern itself with technical matters relating to international shipping. It is expected that this body will come into being at an early date.

Despite the many vicissitudes, Canada's support of the United Nations remained strong. The Secretary of State for External Affairs, the Hon. L. B. Pearson, summed this up on United Nations Day as follows:—

> "We have learned in the long hard years since the Charter was signed that it is easier to produce a blueprint than to complete a structure for peace. The United Nations has had failures and disappointments, but it has also had its achievements—political, economic, social and humanitarian. The achievements should hearten us, and the difficulties become a challenge which should spur us to greater effort in the cause of international co-operation for peace and progress."

Subsection 3.—Canada and the North Atlantic Treaty

Within less than two years of the end of World War II in 1945 and the establishment of the United Nations, people's hopes of a lasting peace gave place to growing anxiety. The United Nations Security Council, which had been given responsibility for maintaining world-wide security, was deliberately prevented by the Soviet representatives from fulfilling this function. The Soviet Union maintained its armed forces after the war at a level that insured to itself a preponderance of military strength in Europe. The Soviet Government blocked attempts by the Western Powers to reach a peace settlement in Europe and Communist Parties were used as an instrument of Soviet policy to sabotage Western European efforts at economic recovery and political co-operation. Under these circumstances, the countries of the Atlantic Community felt themselves in grave peril of Soviet aggression and Communist subversion and they therefore took special collective measures under the United Nations Charter to maintain peace. The Prime Minister of Canada, the Rt. Hon. Louis Stephen St. Laurent, was one of the first to foresee this development. In 1947, when Secretary of State for External Affairs, he said before the United Nations General Assembly that nations might be forced to seek greater safety "in an association of democratic, peace-loving states willing to accept more specific international obligations in return for a greater measure of national security".

The first step in this direction was taken in the spring of 1948 when Belgium, France, Luxembourg, The Netherlands and the United Kingdom signed the Brussels Treaty establishing Western Union. On Apr. 4, 1949, as a result of negotiations between these countries, Canada and the United States, the North Atlantic Treaty was signed at Washington. This Treaty was accepted by all major groups of opinion in Canada and was passed without a single dissenting vote in Parliament.

The original signatories of the Treaty were Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, The Netherlands, Norway, Portugal, the United Kingdom and the United States. In September 1951 it was agreed that Greece and Turkey should be invited to accede to the Treaty and they were admitted in February 1952. In May 1952, on the same day the European Defence Community Treaty was signed at Paris by Belgium, France, Italy, Luxembourg, The Netherlands and Western Germany, a Protocol to the North Atlantic Treaty was signed under which all NATO countries extended to the members of the EDC the guarantees of the North Atlantic Treaty in return for reciprocal obligations to be undertaken by all members of the EDC. As of May 31, 1954, this Protocol has been ratified by the United States, Turkey, Portugal, Greece and The Netherlands. The Canadian Parliament approved it in June 1952 but ratification was postponed while awaiting the action of other governments, more immediately concerned, regarding it.

The North Atlantic Treaty and the Organization.—The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Canada Year Book, pp. 113-115.

Annual Review.*—The North Atlantic Council continued in permanent session at Paris under the chairmanship of the Secretary-General, Lord Ismay. In 1953, Mr. A. D. P. Heeney was succeeded by Mr. L. D. Wilgress as Permanent Representative of Canada to the Council. The Council met in Ministerial Session in September 1953 and April 1954 under the Chairmanship of M. Bidault, French Foreign Minister.

At the September meeting the Council, after reviewing the defence program of the member countries, reached agreement on the level of NATO forces to be achieved and maintained over the next three years; the goals for the end of 1954 were firm commitments while those for 1955 and 1956 were provisional and for planning purposes. The broad lines of future NATO defence planning to meet the threat of aggression over an extended period were agreed upon. The Ministers also had a full exchange of views on the international situation both in formal and in informal discussions. They concluded, first, that there was no real evidence that the basically hostile Soviet policy that had brought NATO into being had been abandoned and, second, that the policy of the NATO countries must therefore be to pursue the twin aims of building the defensive and economic strength and the political unity of the Atlantic Community while at the same time seeking to negotiate on outstanding differences wherever possible.

---

* June 1, 1953, to May 31, 1954.

The meeting in April 1954 was attended by the Foreign Ministers of member governments and its primary purpose was to examine the current international situation and the implications for NATO of recent developments. The Ministers found no evidence that the ultimate aims of the Soviet Union had altered and they therefore agreed, in view of the increasing military strength of the Soviet Union and its satellites, upon the need for continuing efforts, vigilance and unity. The Ministers also adopted, on a Canadian proposal, a procedure designed to develop further the habit of political consultation in the Council. The Council expressed its gratification at the far-reaching steps that had been taken by the United Kingdom and the United States, in public declarations made earlier that month, to ensure close and enduring co-operation with the European Defence Community.

In February 1954, the Council appointed Admiral Jerauld Wright, U.S.N., as Supreme Allied Commander Atlantic to succeed Admiral Lynde D. McCormick.

Canadian Contributions to NATO.—Canada continued in 1953-54 to support NATO with contributions of armed forces to the unified NATO commands, with end-item assistance to other NATO countries and with financial contributions to common budgets.*

The 27th Canadian Infantry Brigade Group in Germany was replaced during 1953 by the 1st Canadian Infantry Brigade Group. The Canadian air contribution of 12 jet fighter squadrons to SACEUR† was completed in 1953 ahead of schedule. The Canadian contribution of 42 vessels to SACLANT‡ remained unchanged.

For the year ended Mar. 31, 1953, a total of $324,000,000 was appropriated for Mutual Aid and for 1953-54 Parliament was asked to approve an appropriation of $300,000,000. Under this program such items as ammunition, military vehicles, radar and radio apparatus, minesweepers and jet aircraft were furnished to other NATO countries both from reserve stocks and, in increasing proportion, direct from current production. In addition, airmen from NATO countries were trained in Canada as part of the Mutual Aid Program. By the end of 1953, 925 pilots and 1,605 navigators from Belgium, Denmark, France, Italy, Norway and the United Kingdom had completed training under this scheme; 965 trainees, including airmen from Turkey and Portugal, were undergoing training in early 1954 and it was planned to offer training for 1,200 airmen each year over the next three years.

The 1953-54 estimates provided for expenditures of $15,150,000 to cover Canada's share of the cost of NATO common infrastructure programs during the year, $1,750,000 for Canada's contribution to the budgets of the NATO Military Headquarters, and $183,000 for the Canadian contribution to the budget of the NATO Civilian Headquarters.

Subsection 4.—Canada and the Colombo Plan

The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting on Foreign Affairs held at Colombo, Ceylon, Jan. 9-14, 1950. Although the Colombo Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development of all countries and territories in the general area of south and southeast Asia.

---

* Contributions made in 1952-53 are given in the 1954 Year Book, pp. 115-116.
† Supreme Allied Commander Europe.
‡ Supreme Allied Commander Atlantic.

The Consultative Committee, an intergovernmental body which meets from time to time to review the progress of the Colombo Plan and to consider policy matters in connection with its implementation, now counts as members Australia, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Laos, Nepal, New Zealand, Pakistan, the United Kingdom (and its territories in the area, such as Malaya, Singapore and Sarawak) and Viet-Nam, as well as the United States which is also engaged in a substantial program of economic aid in the same region. To develop the technical assistance side of the Plan, a Council for Technical Co-operation has been set up at Colombo to which Canada has appointed a permanent representative. The Technical Co-operation Program, though an integral part of the Colombo Plan, is designed to supplement the technical assistance activities of the United Nations and the specialized agencies in the area.

Up to Mar. 31, 1954, the Canadian Parliament approved annual contributions totalling $76,600,000 for capital and technical assistance to governments in south and southeast Asia. The Estimates submitted to Parliament for 1954-55 include provision for a further contribution of $25,400,000.

Capital assistance has so far been provided to India, Pakistan and Ceylon. The Canadian contribution has consisted primarily of direct assistance to various development projects (e.g., power-generating plant, transportation equipment, fishing boats, and surveys of resources). It has also included goods required in these countries which the recipient governments have been able to use as a means of raising some of the money needed to meet local costs of development programs (e.g., wheat, flour, copper, aluminum, and equipment required by state governments or public corporations). Canadian aid has been helping these countries in both ways, to develop their economies and raise their standards of living.

Under the Technical Assistance Program up to Mar. 31, 1954, about 177 persons had been received for training in Canada in a great variety of technical fields and 46 Canadian experts had been retained for service in Colombo Plan countries in such fields as fisheries, refrigeration, marine biology, agriculture, soil erosion, vocational training and the maintenance of tractors and agricultural machinery.

The Consultative Committee on the Colombo Plan held its fifth meeting at New Delhi, India, in October 1953, which was attended by a Canadian delegation led by the Hon. James Sinclair, Minister of Fisheries. A published Report* outlines the progress made so far and indicates the plans for the future. It contains separate sections describing the activities of each member of the Colombo Plan as either contributing or receiving countries.

The annual Policy Session of the Council for Technical Co-operation was also held at New Delhi during October. Its survey of developments in the technical assistance field is appended to the report of the Consultative Committee.

At the invitation of the Canadian Government, the next meetings of the Consultative Committee and of the Council for Technical Co-operation will be held at Ottawa in the autumn of 1954.

Note.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

The records accumulated at the decennial censuses of Canada since Confederation in 1867 to the latest census of 1951 make a valuable contribution to the demographic history of the nation. Each successive decade has added to the vast scope of the material; the detailed statistical analyses and the numerous monographs and studies available under the several aspects of demography and agriculture have made the census a most important statistical measure of accomplishment and progress. An outline of the history of the census is given in the 1947 Year Book, pp. 96-97.

The main legal reason for a periodic census under the constitution of Canada is to determine representation in the House of Commons; this, according to the British North America Act, is based on population (*see* pp. 61-62). The payment of provincial subsidies on a per capita basis is adjusted annually on population estimated from census data. In view of this, each person is counted as belonging to the locality of his regular domicile rather than to the place where he may be at the date of enumeration.

The modern nation-wide census, however important this redistribution purpose, has a much wider sphere of usefulness. It constitutes, through the data collected directly from the people, a true measure of the social and economic progress of the country and can, therefore, be used in the regulation and general administration of public affairs, social security, rehabilitation programs, etc.

Basic figures from the 1951 Census have been summarized under the respective headings of this Chapter. More detailed information and extended analyses may be obtained from Census publications.

Section 1.—Growth of the Population

The population history of Canada, from the first census in 1666 when 3,215 persons were enumerated to the 1951 Census when the figure was 14,009,429, reveals an outstanding rate of population growth. Each decade, of course, contributed to this growth but the ten-year periods 1901-11, 1911-21 and 1941-51 merit particular mention. In the decade 1901-11, Canada's population increased by 34·2 p.c., the largest growth in the nation's history. Immigration was the main factor in this gain, 1,800,000 persons having entered the country during the period. Despite World War I with its accompanying population losses through casualties, emigration and the wartime influenza epidemic, Canada's population increased by 21·9 p.c. in the 1911-21 decade.

---

* This Chapter has been revised in the Census (Demography) Division, Dominion Bureau of Statistics.

The Census of 1951 showed the population of Canada to be 14,009,429, representing an increase of 2,502,774 or 21·8 p.c. over the 1941 figure of 11,506,655. Newfoundland's entry into Confederation accounted for 361,416 of this increase. Excluding Newfoundland, the population in 1951 totalled 13,648,013, an increase of 2,141,358 or 18·6 p.c. over the 1941 population of the nine provinces and the territories. This numerical increase was the largest on record and the percentage increase was exceeded only in the 1901-11 and 1911-21 decades. The population increase in the 1941-51 decade is all the more remarkable when consideration is given to the fact that immigration was greatly restricted during the war years. With the resumption of immigration in the post-war years, however, Canada had a net gain of about 424,000 in population through immigrant arrivals over the decade. The period was characterized also by high birth rates, and the natural increase was just under 2,000,000 for the ten-year period.

1.—Numerical and Percentage Distribution of Population, by Province, Decennial Census Years 1871-1951

Note.—The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 are shown in the 1951 Year Book, p. 131. Intercensal estimated populations from 1867-1904 will be found in the 1936 Year Book, p. 141; from 1905-30 in the 1946 edition, p. 127; from 1932-40 in the 1952-53 edition, p. 143; and from 1942-54 in Table 2, p. 137, of the present edition.

[1] Populations of Newfoundland (which was not part of Canada until 1949) were: 1871, 152,500 (estimated); 1881, 186,500 (estimated); 1891, 202,040; 1901, 220,984; 1911, 242,619; 1921, 263,033; 1931, 281,500 (estimated); 1941, 303,300 (estimated); and 1945, 321,819.

[2] Includes 485 members of the Royal Canadian Navy recorded separately in 1921.

Section 2.—Intercensal Estimates and Movement of Population

Intercensal estimates of the population have many uses. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. More recently, they have proved useful for estimates of labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed in the first place for the total population of Canada and for each province. It is a requirement that these be made available about the date to which they apply, June 1 of each year. As final figures on the components of population changes are not ready at that date, the numbers of births, deaths and immigrants are partly filled in by extrapolation so that a preliminary figure is secured for the June to May interval. To avoid a cumulative error the calculation, in effect, starts anew with the latest preceding census for each year's estimates and uses the most up-to-date figures then available. To the census figures are added the births of the intervening years and the deaths are subtracted. Immigrants are added and emigrants are subtracted. On the last item of this calculation there is least information; it is possible to ascertain from United States immigration figures the number of Canadians entering the United States and sometimes the number of those going to the United Kingdom but data are not available for other countries.

The program of population estimates calls for two figures to be given in respect of each year: one based on preliminary materials, as described above, necessarily involving an extrapolation of birth, death and immigration returns, and the other on final figures subject to no further change. The latter can be made available only when the last item of information has been secured and this last item is the succeeding decennial census. With the release of the 1951 Census totals, the estimates were revised for the decade 1941-51.

Since estimates for successive years are independently calculated back to the latest census, the best estimate of the balance of population change is not obtained by subtracting the figure for one year from that for the year following. Much interest attaches to the year-to-year balance and the following statement is presented, which gives all available data on that point.

Year	*Calendar-Year Data*[1]				*Estimated Population as at June 1*[1]
	Births	*Deaths*	*Natural Increase*	*Immigration*	
1941	**255,317**	**114,639**	**140,678**	**9,329**	**11,490,000**
1942	272,313	112,978	159,335	7,576	11,637,000
1943	283,580	118,635	164,945	8,504	11,778,000
1944	284,220	116,052	168,168	12,801	11,929,000

---

[1] Exclusive of the Yukon and Northwest Territories. Newfoundland included from 1949.

[2] Subject to adjustment as later data are made available.

2.—Estimates of Population, by Province, Intercensal Years 1941-54

Note.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for all provinces for 1941 and 1951 and for the Prairie Provinces for 1946 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141, for 1905-30 in the 1946 edition, p. 127, and for 1931-40 in the 1952-53 edition, p. 143.

[1] Estimates for Newfoundland prior to union with Canada, which took place on Mar. 31, 1949, are not included in Canada totals.

The traditional movement of population on the North American Continent from east to west has not been apparent in Canadian statistics for recent years. The most spectacular changes are shown in the Prairie Provinces and in Britist Columbia. The three Prairie Provinces lost by migration about 250,000 people between 1931 and 1941 and somewhat more from 1941 to 1951. British Columbia gained at the rate of about 8,000 a year during the 1930's and at about 23,000 a year during the 1940's. On an absolute basis, Ontario received more people than British Columbia but in relation to its larger population this growth was only one-third as important. Quebec's net change was negligible relative to its population. Nova Scotia gained during the 1930's but lost in the 1940's, the Maritime Provinces as a whole losing considerably over the two decades.

3.—Numerical Changes in the Populations of the Provinces through Interprovincial Migration, 1931 to 1941 and 1941 to 1951

Province	1931 to 1941	1941 to 1951
	No.	No.
Prince Edward Island	−3,000	−12,000
Nova Scotia	+8,000	−39,000
New Brunswick	−10,000	−42,000
Quebec	−2,000	−12,000
Ontario	+77,000	+305,000
Manitoba	−48,000	−61,000
Saskatchewan	−158,000	−199,000
Alberta	−42,000	−7,000
British Columbia	+82,000	+231,000

Section 3.—Density of Population

The land area and density of the population per square mile is given by province in Table 4 for the census years 1921-51. It will be noted that the figures for 1951 include the Province of Newfoundland, and this fact should be kept in mind in comparisons with earlier censuses.

4.—Land Areas and Density of Population, by Province, Decennial Census Years 1921-51

Province or Territory	Land Area in Sq. Miles	Population, 1921		Population, 1931		Population, 1941		Population, 1951

[1] Includes Labrador. [2] Calculated on the basis of 1,970,385 sq. miles which excludes the land area of Newfoundland. [3] Includes Newfoundland. [4] Total includes 485 members of the Royal Canadian Navy recorded separately in 1921. [5] Calculated on the basis of 3,429,169 sq. miles which excludes the land area of Newfoundland.

Section 4.—Rural and Urban Population

Before 1951, the population residing within the boundaries of all incorporated cities, towns and villages of a province was classified by the Census as urban and the remainder as rural. Since the laws governing incorporation vary among provinces there was no uniform line of demarcation between the rural and urban population throughout Canada. In the 1951 Census, the aggregate size of population within a given area rather than provincial legal status was the main criterion for the rural-urban classification. The population residing in cities, towns and villages of 1,000 or over, whether incorporated or unincorporated, as well as the population of all parts of census metropolitan areas was defined as urban and that outside such localities as rural.

Table **5** presents the rural and urban population, by province or territory, for 1951. The rural is further classified by farm and non-farm residence and the urban by size of locality.

5.—Rural Population classified by Farm and Non-farm, and Urban Population classified by Size Group, by Province, Census 1951

Province or Territory	Rural			Urban				
	Farm[1]	Non-farm	Total	1,000 to 9,999	10,000 to 29,999	30,000 to 99,999	100,000 or Over	Total[2]

Section 5.—Population of Counties and Census Divisions

Population totals for counties and census divisions for census years 1901-51 are given in the 1952-53 Year Book, pp. 137-141. Further details, including populations of the subdivisions of counties, may be found in *Ninth Census of Canada 1951*, Vol. I.

Section 6.—Population of Incorporated Urban Centres

The growth of Canadian cities with populations of over 30,000 from 1941 to 1951, together with the years of their incorporation as cities, is shown in Table **6**. All incorporated cities, towns and villages having populations of 1,000 or over in 1951 are listed in Table **9**.

6.—Incorporated Cities with Populations of over 30,000 at the 1951 Census and Comparable Data for 1941

NOTE.—Incorporated cities in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger (†).

[1] Census taken by the Newfoundland Government in 1945; 1941 figure not available.

For census purposes, metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. The total population of each of the census metropolitan areas in 1951, with the comparable figure from the 1941 Census covering the same area as in 1951, is shown in Table **7**. In this table the metropolitan area has been named after the largest city of each urban group.

7.—Populations of Census Metropolitan Areas, 1951, compared with Populations of Same Areas in 1941

[1] Located partly in Alberta. [2] Not incorporated in 1941. [3] Penticton District Municipality in 1941.

Section 7.—Sex and Age Distribution

Sex.—The sex distribution of the Canadian people has been characterized since early colonial times by a preponderance of males, although this condition has been greatly modified in more recent years. In 1666, during the early years of settlement by French immigrants, 63·3 p.c. of the population were males. In 1784, when British immigration to Canada was commencing, there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada and 499,067 males to 452,937 females in the more newly settled Upper Canada. Since Confederation, the newer sections of Canada—the west and the northwest—have shown the greatest excess of males.

From 1871 to 1941, for Canada as a whole, the proportion of males never dropped below 51 p.c. of the total population, whereas for Western Canada it varied between 53 p.c. and 59 p.c. By 1951, however, the proportion of males to the total population had dropped to 50·6 p.c. for Canada as a whole.

10.—Sex Distribution of the Population, by Province, Decennial Census Years 1921-51

Note.—Figures for the Censuses of 1871, 1881, 1891, 1901 and 1911 are given in the 1948-49 Year Book, p. 150.

[1] Includes 485 members of the Royal Canadian Navy recorded separately.

Age.—The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology and a multitude of events and activities that are of great importance in the national life.

Immigration has a strong influence on age distribution: it does not directly affect the very young sections of the population except to a small degree, but it immediately affects the age groups between the 'teens' and the 'twenties' and its effects are carried to the older groups as time goes by. Thus, the influence of the very heavy immigration of the early years of the century (1900-11) is indicated by the fact that, in 1901, 175·9 persons per 1,000 of the total population were in the age group 20-29 years and 131·3 persons per 1,000 in the group 30-39 years; a decade later, 190·7 per 1,000 were in the former group and 142·9 in the latter. Since immigration slowed down very decidedly after the outbreak of war in 1914, the influence of these earlier accretions to the population has crept through the upper age groups year by year until it has now reached those of the population in their 'fifties'.

Between 1931 and 1941 a more pronounced general ageing of the population is shown, a result of almost non-existent immigration and a lower birth rate—factors that were emphasized during the depression years. In 1921, the number per 1,000 of total population between 40 and 59 years of age was 183; it was 201 in 1931 and 209 in 1941. Greater proportional increases, however, are shown by the group 60 years of age or over; this group represented 75 per 1,000 of the total population in 1921, 84 in 1931 and no less than 102 per 1,000 in 1941.

In 1951, there were 203·2 persons per 1,000 of total population between 40 and 59 years of age and 113·7 in the group 60 years of age or over. However, there were 222·7 persons per 1,000 of total population in the under 10 years of age group in 1951 as compared with 182·3 in 1941, 212·7 in 1931 and 240·0 in 1921.

Table **11** shows the population of Canada classified by five-year age groups and sex for the census years 1931, 1941 and 1951. The provincial distribution from the 1951 Census, by specified age groups, is shown in Table **12**.

Section 8.—Marital Status

Next to the sex and age distribution of a population, that of marital status is probably most fundamental from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population; if the proportion of females in this group is small, the expected proportion of births will also be small. In 1951, 64·0 p.c. of all married females were in the age group 15-44 as compared with 61·2 p.c. in 1941 and 63·5 p.c. in 1931. This indicates a resumption of conditions favourable to the birth rate that prevailed from 1871 to 1921 but was arrested temporarily during the period of world-wide depression.

Although Canada has more single than married citizens, information from the 1951 Census shows that the nation's married population grew more than twice as fast as the single population in the decade between 1941 and 1951. With a total population increase of nearly 22 p.c., the number of single persons in Canada increased by 13·5 p.c., married by 32·2 p.c., widowed by 22·5 p.c. and divorced by 128·0 p.c. The entry of Newfoundland into Confederation accounted for 3·3 p.c. of the increase in single persons, 2·9 p.c. in married and widowed persons combined and 0·5 p.c. in divorced persons. Other striking statistics of marital status are the excess of married males over married females (largely owing to a preponderance of male immigrants whose wives had yet to join them), the great preponderance of widows compared with widowers and the large and increasing number of divorced persons.

Section 9.—Origins

A population composed of diverse racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements, although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English: historically the French is much the older and, excepting at the time of the 1921 Census, has always exceeded in numbers any one of the basic British stocks.

For purposes of the census, a person's origin or cultural group is traced through his father. For example, if a person's father is German and his mother Norwegian, the origin is entered as "German". Wherever possible, the origin of a person is established by asking the language spoken by the person or by his paternal ancestor when he first came to Canada.

14.—Origins of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for the Decennial Censuses 1871-1921 are given in the 1948–49 Year Book, p. 154.

Section 10.—Religious Denominations

At each census the numbers of persons attached to any religious denomination, as reported by the persons enumerated, have been recorded. The distribution of the principal denominations for the census years 1931, 1941 and 1951 is given in Table **15**.

15.—Principal Religious Denominations of the Population, Census Years 1931, 1941 and 1951

NOTE.—More detailed figures for the Decennial Censuses 1871–1921 are given in the 1948–49 Year Book, p. 155.

Religious Denomination	1931	1941	1951	
	No.	No.	No.	p.c.
Adventist	16,058	18,485	21,398	0·2
Baptist	443,944	484,465	519,585	3·7

[1] Includes "Hutterite".

[2] Includes "Other Greek Catholic".

Section 11.—Countries of Birth

The census collects information on both country of birth of immigrant arrivals in Canada and province of birth of the native-born. For persons born outside of Canada the country of birth, as constituted at the date of the census, is recorded. Table **16** gives the total population by countries of birth for the census years 1931, 1941 and 1951.

16.—Countries of Birth of the Population, Census Years 1931, 1941 and 1951

Note.—Figures for the Decennial Censuses 1871–1921 are given in the 1948–49 Year Book, p. 158.

Country of Birth	1931	1941	1951
	No.	No.	No.
Canada	8,069,261	9,487,808	11,949,518

Totals	**10,376,786**	**11,506,655[5]**	**14,009,429**

[1] Includes the 26 counties of Ireland in 1931 and 1941. [2] Includes Lithuania and Ukraine. [3] Includes Denmark, Iceland, Norway and Sweden. [4] Includes Austria, Czechoslovakia, Hungary, Yugoslavia, Poland and Roumania. [5] Includes "birthplace not stated".

Section 12.—Languages and Mother Tongues

Official language is not to be confused with mother tongue. Mother tongue is the language a person first spoke in childhood and still understands; official language (a term used herein for census purposes) refers only to the English and French languages. The numbers of persons speaking one, both or neither of the official languages are given in Table 17, classified by province.

17.—Population Speaking One, Both or Neither of the Official Languages, by Province, Census 1951

Note.—Infants are classed as speaking the language of the home.

Province or Territory	Population Speaking—			
	English Only	French Only	English and French	Neither English nor French
	No.	No.	No.	No.
Newfoundland	356,377	153	3,990	896
Prince Edward Island	88,743	914	8,745	27
Nova Scotia	595,257	7,462	39,524	341
New Brunswick	318,560	100,712	96,095	330
Quebec	462,813	2,534,242	1,038,130	20,496
Ontario	4,115,584	78,974	359,965	43,019
Manitoba	685,914	7,869	58,441	24,317
Saskatchewan	767,248	4,656	40,789	19,035
Alberta	868,696	5,922	40,785	24,098
British Columbia	1,112,937	727	39,433	12,113
Yukon Territory	8,337	10	519	230
Northwest Territories	6,929	171	1,031	7,873
Canada	**9,387,395**	**2,741,812**	**1,727,447**	**152,775**

Mother tongue spoken is dealt with in Table **18**, which shows that 1,659,770 persons, at June 1, 1951, had neither English nor French as mother tongue.

18.—Mother Tongues of the Population, Census 1951

NOTE.—Infants are classed as speaking the language of the home.

Mother Tongue	Number	Percentage of Total	Mother Tongue	Number	Percentage of Total
English	8,280,809	59·11	Lithuanian	12,307	0·09

Section 13.—Dwellings, Households and Families

A fairly complete summary of the principal statistics on dwellings, households and families recorded at the 1951 Census is given in the 1954 Year Book, pp. 139-145. More detailed information may be found in Vol. III of the *1951 Census.* The subject is only briefly covered in this Section.

Dwellings and Households.*—The 1941 Census of Housing was based on a 10-p.c. sample of dwellings situated within the nine provinces. For the 1951 Census, the size of the sample was increased to 20 p.c. and the coverage included Newfoundland but, as in 1941, did not extend to the Yukon and Northwest Territories. For comparison purposes, Newfoundland is omitted from the 1951 figures in Table **19**.

Table **19** shows that the increase in the number of dwellings during the 1941-51 decade was 11 p.c. higher than the increase in population, thus reducing the number of persons per dwelling from 4·3 to 4·0. Definitional changes between 1941 and 1951 are partly responsible for the relatively larger increase in dwellings, particularly of the apartment and flat type. Since owned dwellings increased by 49·1 p.c. and rented dwellings by only 4·2 p.c., it would appear that many people who were tenants in 1941 have since bought homes, and that most new homes were built for owners rather than for tenant occupancy.

---

* 1951 Census definitions are briefly as follows: DWELLINGS.—A *Dwelling* is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. A *Single Detached Dwelling*, commonly called a single house, is a house containing one dwelling unit and completely separated on all sides from any other building or structure. *Apartments and Flats* include dwelling units in apartment blocks, suites in duplexes or triplexes, suites in structurally converted houses, living quarters located in business premises, janitor's quarters in schools, etc. In determining the number of *Rooms* in a dwelling, only those used or suitable for living purposes, including rooms occupied by servants, lodgers, or members of lodging families, are counted. HOUSING.—A *Household* is a person or group of persons occupying one dwelling unit, the number of households thus equalling the number of occupied dwellings. Every person must be a member of some household, whether it consists of a family group with or without servants, lodgers, etc., a group of unrelated persons sharing a dwelling, or one person living alone. A dwelling is classed in need of *Major Repair* if it possesses any one of the following defects: sagging or rotting foundations indicated by cracked or leaning walls; faulty roof or chimney; unsafe outside steps or stairways; interior badly in need of repair. A *Crowded Dwelling* (or Household) is defined as one in which the number of persons exceeds the number of rooms occupied.

19.—Dwelling Characteristics, Census Years 1941 and 1951

(Excludes Newfoundland and the Territories)

Item	1941	1951	Increase 1941-51	
	No.	No.	No.	p.c.

Persons per dwelling	4·3	4·0	...	...

[1] Exclusive of hotels, institutions, camps, etc.

[2] Includes auto-trailers, houseboats, tents and other miscellaneous types.

The statistics of Table **20** reflect the high level of prosperity throughout the decade in both urban and rural areas. In 1951 a higher percentage of homes had indoor plumbing, electricity and furnace heating, and had such conveniences as mechanical refrigerators, electric vacuum cleaners, telephones, radios and passenger automobiles. There was a sharp drop in the number of homes needing major repair. Washing machines are not shown in Table **20** because there are no comparable 1941 figures but, in 1951, 72·5 p.c. of the dwellings possessed a powered type of washing machine. Though much of this advance may be attributed to general prosperity, part of the explanation of the trend is to be found in the increasing urbanization of the Canadian population and the availability of modern conveniences to rural areas.

20.—Housing Characteristics, Census Years 1941 and 1951

(Excludes Newfoundland and the Territories)

Characteristics	1941		1951		Increase 1941-51

$60 or over	24,034	2·4	162,265	14·7	138,231	575·1

[1] For cities of 30,000 or over only.

[2] For exclusive use of household.

[3] Includes "rent-free" dwellings.

Families.*—The number of families increased at a greater rate during the 1941-51 decade than the general population, with the result that the average number of persons per family dropped from 3·9 to 3·7. Table **21** shows that families with no children or with one or two children increased proportionately at the expense of families with three or more children. It is also interesting to note that the increase in number of families was greater than the increase in the number of children in families. This does not necessarily indicate a trend in the birth rate. Other factors have an important bearing, such as the ageing of the population, the great increase in the marriage rate during the years just prior to the 1951 Census, and the tendency for young people to leave the family home for employment elsewhere.

---

* For census purposes, a *Family* consists of husband and wife (with or without children) or a parent with an unmarried child (or children) living together in the same dwelling. Unmarried sons and daughters under 25 years of age and living with their parents are classed as *Children* as well as wards and guardianship children under 21 years of age. Unmarried sons and daughters, 25 years of age or over, living with their parents are counted as family members but not as children.

21.—Family Characteristics, Census Years 1941 and 1951

Section 14.—The Blind and Deaf Population

Information was obtained in the 1951 Census for totally blind or deaf persons. Persons blind in one eye, for example, were not recorded as blind and partially deaf persons, such as those able to hear with the help of a mechanical aid, were not included. Table **22** shows the number and proportion of totally blind and deaf persons per 10,000 population in each province and territory. More detailed information on this subject is contained in Vol. II of the *1951 Census.*

22.—Number of Blind and Deaf Persons and Proportion per 10,000 Population, by Province, 1951

Section 15.—Census of the Prairie Provinces

The Census and Statistics Act of 1905 and the Statistics Act of 1918 (replaced by the Statistics Act, 1948) provided for a census of population and agriculture for the Provinces of Manitoba, Saskatchewan and Alberta, to be taken in 1906 and every tenth year thereafter, in addition to the nation-wide decennial census.

The latest Prairie Provinces census was taken as of June 1, 1946, and the results are summarized in the 1948-49 Year Book, pp. 162-171, and in the 1951 Year Book, pp. 130-132. More detailed information is contained in the census volumes of the 1946 Census of the Prairie Provinces.

Section 16.—The Indians and Eskimos of Canada

The Indians.*—Entry of native tribes into North America probably began as early as 15,000 years ago, according to the findings of archæologists. It is believed that roving bands of hunters, driven from their lands in northeastern Asia, crossed into North America by way of Bering Strait. Ethnic origins of the Indians appear to have varied. Though differences in language were many and varied somewhat from tribe to tribe, religious background and traditions seemed to stem from practically the same source.

There are ten linguistic groups of Indians in Canada, of which four are east of the Rocky Mountains—Algonkian, Athapaskan, Iroquoian and Siouan—and six are west of the Rockies—Kootenayan, Salishan, Wakashan, Tsimshian, Haida, and Tlinkit. Indians of Algonkian stock are the most numerous and are scattered throughout the area from the Atlantic seaboard to the Rocky Mountains. Included in the Algonkian stock are such tribes as the Micmacs of the Maritimes, the Montagnais of Quebec and the Ojibwas, Crees and Blackfeet who live in the Prairie Provinces. The Iroquoian stock, which includes the Hurons, is found mainly in Ontario and Quebec, while tribes of Sioux are located in the Prairie Provinces. The Northwest and Yukon Territories are the usual homelands of the Athapaskan.

According to the 1951 Census, there were 155,874 persons of Indian origin in Canada, distributed by province and sex as follows:—

Province	*Male*	*Female*	*Total*
Newfoundland	184	174	358
P. E. Island	136	121	257
Nova Scotia	1,379	1,338	2,717
New Brunswick	1,164	1,091	2,255
Quebec	7,556	7,075	14,631
Ontario	19,025	18,345	37,370
Manitoba	10,642	10,382	21,024
Saskatchewan	11,265	10,985	22,250
Alberta	10,743	10,420	21,163
British Columbia	14,602	13,876	28,478
Yukon	734	799	1,533
N.W.T.	1,913	1,925	3,838
CANADA	79,343	76,531	155,874

These figures include all persons with a paternal ancestor of Indian race, many of whom have long been assimilated and have lost their identity as Indians. The number of persons considered as Indians under Indian legislation is placed (1949) at 136,407. They are divided into about 600 Bands and live on 2,200 or more reserves set aside for their use and benefit.

---

* Prepared in the Indian Affairs Branch, Department of Citizenship and Immigration, Ottawa.

Administration.—The primary function of the Indian Affairs Branch, under the Citizenship and Immigration Act and the Indian Act, is to administer the affairs of the Indians of Canada in a manner that will enable them to become increasingly self-supporting and independent. The functions of the Branch include the management of Indian reserves and surrendered lands, trust funds, welfare projects, relief, family allowances, education, descent of property, rehabilitation of Indian veterans on reserves, Indian treaty obligations, enfranchisement of Indians and other matters.

The Indian Act currently in effect was drafted following inquiry into Indian affairs by a Special Joint Committee of the Senate and the House of Commons during 1946, 1947 and 1948, and subsequent conferences with representative Indian groups. Proclaimed Sept. 4, 1951, the new Act succeeds an Act that was first consolidated in 1876 and amended from time to time.

The Indian Act provides a measure of self-government on reserves through Band councils chosen according to tribal custom or under an elective system of secret ballot. The various expenditures of Band funds, with few exceptions, require the consent of the Band council, comprising a chief and councillors. The right to vote in Band elections and other votes is extended to all members of a Band, men and women, who have reached the age of twenty-one years. A number of Indian women have been elected to office since the new Act came into force. Secrecy of voting has been provided under election regulations. The powers of Band councils to make by-laws correspond in a general way with those exercised by councils in a rural municipality.

Indians who are veterans of World Wars I or II and their wives may vote in federal elections. Indians who live off the reserve, under certain circumstances, also have the right to vote, while Indians who live on the reserve may vote if they waive exemption to taxation on personal property such as earnings or other incomes received on the reserve. Indians may sue and be sued, subject to provisions of the Indian Act which exempts from seizure real and personal property held on the reserve.

Enfranchisement, the removal of all legal distinction between Indians and other members of the community, is provided for under the Indian Act. An enfranchised Indian is no longer subject to the provisions of the Act. In order to facilitate enfranchisement of Indian Bands, agreements may be entered into with provincial or municipal authorities to provide financial assistance to indigent, infirm, or aged members of the enfranchised Band.

The nomadic existence followed by Bands of Indian hunters is gradually giving way to a more stable way of life. Many Indians are profitably engaged in the fishing industry on the British Columbia coast; Indians across Canada are being encouraged to engage in agricultural pursuits and are prominent in many other trades and occupations. For example, the reputation of the Indians from the Caughnawaga Reserve, near Montreal, as skilful structural steel workers is known throughout North America.

The Indian Affairs Branch takes a census of the Indian population under its jurisdiction at five-year intervals. The figures for 1949 given in Tables **23** and **24** are the latest available.

Education.—The proportion of Indians who have become satisfactorily adjusted to modern conditions is, of course, greater among those who have taken full advantage of the Federal Government's educational program. Residential schools are available to Indian children from broken homes, orphans or those who, because of isolation or the nomadic way of life of their parents, would otherwise be unable to attend school. For children who can live at home, the Federal Government operates day schools in Indian communities. Alternatively, where conditions are favourable, arrangements are made with local educational authorities for Indian children to attend non-Indian schools. An increasing number of Indian children in the elementary grades have been admitted to schools where other children are enrolled and the majority of Indian children attending secondary school and college classes are educated in association with non-Indians. The Federal Government pays the charges for school fees and books, necessary transportation and, for some students who must live away from home, part or all of the cost of room and board.

Similar assistance is given to Indian young people to encourage them to obtain vocational and professional training. Of those who have qualified as school teachers, 52 are now serving in Indian schools. Indians have qualified in medicine, dentistry, nursing, agriculture and other professions. Preference in appointment to positions in the Indian service is given to qualified Indians.

In the year ended Mar. 31, 1954, there were 461 Indian schools in operation, comprising 67 residential schools, 360 regular day schools, 22 seasonal schools and 12 hospital schools. The enrolment in residential schools was 11,090 and in all other schools, 17,084. Enrolment by province was: P.E.I., 47; N.S., 627; N.B., 400; Que., 2,444; Ont., 6,566; Man., 4,045; Sask., 3,791; Alta., 3,697; B.C., 5,793; Y.T., 269; and N.W.T., 495.

In addition to pupils in Indian schools there were 2,360 Indian children enrolled in elementary grades in provincial and private schools and 1,021 in secondary schools, making a total enrolment of Indians in educational classes of 31,555. In the year ended Mar. 31, 1954, there were 1,621 Indians receiving secondary and higher education.

Welfare.—During 1953, 21,306 Indian families received $3,846,650 in family allowances on behalf of 62,571 children. These payments contributed substantially to a better balanced diet and better clothing for Indian children. Approximately $3,000,000 is paid annually to Indians in the form of blind persons' allowances, old age assistance and old age security payments. When necessary, the Government provides direct relief assistance to Indians in the form of food, fuel, clothing and household equipment. The Indian Affairs Branch also makes arrangements for private foster-home and institutional placement of children, juvenile delinquents, cripples, and unemployable and aged adults; assistance is also provided for unmarried mothers and for the rehabilitation of disabled Indians.

Increasing emphasis is being placed on the importance of the suitable placement of children requiring protection and upon the importance of preventive work in the field of juvenile delinquency.

Policy and procedure regarding provision of special foods as a preventive measure against tuberculosis has been revised providing for substantial increases in the scale of rations allowed. Apart from the humanitarian aspect, the revised policy has as its aim a reduction in the number of new cases. A well-nourished body is not an easy victim of disease.

Improvement in housing conditions has been achieved in recent years through the efforts of the Indians themselves, as a result of expenditures from appropriation of Indian Band funds, and through Veterans' Land Act benefits. Costs of house repairs during the year ended Mar. 31, 1953, amounted to approximately $221,890 and the value of new houses built on the various reserves was estimated at $880,168. Revolving Fund loans are available for the purchase of farm machinery, implements, gas and oil, fencing materials, seed grain, live stock and similar essentials, and also for payment of wages and repairs to buildings and vehicles.

Fur Conservation.—During 1953 the fur-development program, undertaken in co-operation with the various provinces, was continued. Beaver production in Saskatchewan, Manitoba and Ontario increased, approximately 173,000 pelts, with an estimated value of $1,631,000, being taken. In addition, about 1,097,000 muskrats having a value of $1,013,000 were trapped in Manitoba and Saskatchewan. Indian participation in the three provinces from the trapping of these fur-bearers was valued at about $1,832,000. In the Province of Quebec, nine fur preserves with a total area of approximately 150,000 sq. miles are set aside exclusively for Indian trappers under joint management by the Indian Affairs Branch and the Quebec Department of Fish and Game. Five reserves are in production and one in partial production. During 1953, these areas produced over 13,000 beaver, which brought more than $247,000 to the Indian trappers.

Eight full-time supervisors are employed across Canada to assist the Indians to derive the fullest possible benefits from hunting and trapping.

The Eskimos.*—The Eskimos are only a fragment of the total population of Canada, numbering, according to the 1951 Census, only 9,607 persons. However, they are part of the human resources of the country and as such are entitled to the benefits of Canadian citizenship and to assistance in adapting themselves to changing conditions. They, together with the Indians, represent the original inhabitants of Canada and their ingenuity and resourcefulness are illustrated by the fact that they have maintained their existence against a harsh unrelenting climate in a region where food, being almost entirely fish or animal, requires great skill to obtain and is most unpredictable in its availability. Advancing civilization has, however, brought many problems to Canada's northernmost citizens, who have been literally translated from the Stone Age to the Atomic Age in a period of 40 to 50 years, and to these problems the Federal Government has been giving increasing attention.

---

* Prepared in the Editorial and Information Division, Department of Northern Affairs and National Resources, Ottawa. *See* also the special article "The Northland—Canada's Challenge", pp. 22-32.

The Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources is responsible for the administration of Eskimo affairs. The Department of National Health and Welfare is responsible for health and medical services. Royal Canadian Mounted Police detachments throughout the north undertake field duties for both Departments. In fact, the problems involved in looking after a sparse Eskimo population scattered over about 900,000 sq. miles of territory requires the continuous co-operation of all northern inhabitants—teachers, missionaries, traders, doctors, nurses, radio operators and weather-station personnel. Administrative contact is maintained by radio and through the Eastern Arctic Patrol which carries representatives of the Administration and other government departments on an annual inspection tour. Officers of the Administration also make periodic visits to Arctic posts by air.

Family allowances are paid to Eskimos in kind from a list designed to supplement rather than to supplant the normal native diet. Eskimos also enjoy the full benefits of old age security and old age assistance payments and of allowances for blind persons.

Missions, assisted by Government grants, operate hospitals at Aklavik, Chesterfield Inlet and Pangnirtung, and the Department of National Health and Welfare has nursing stations at Coppermine, Fort Chimo, Coral Harbour, Port Harrison, Cape Dorset and Lake Harbour. Tuberculosis and other medical surveys are carried out from year to year and treatment, where necessary, is provided either at the hospitals within the territory or at larger institutions outside.

An Arctic Division has been established by the Department of Northern Affairs and National Resources to study and deal expressly with Eskimo problems. This Division has the benefit of the advice of a continuing advisory committee composed of representatives of organizations, government and private, concerned with the Eskimos. Efforts are being made to encourage self-sufficiency of the Eskimo by better utilization of the existing resources of the country and the development of small local industries such as whaling, fishing, boat-building, manufacture of clothing, eiderdown collecting and art handicrafts. Eskimos in over-populated or depleted areas are being encouraged and assisted to move to areas where game is more plentiful or where employment may be found. A fund has been established from which loans may be made to assist Eskimos to carry out approved projects for the betterment of their economy.

Since 1945 the Government has built eight schools primarily for Eskimo children. They are located at centres spread from the Mackenzie delta in the west to northern Quebec—Aklavik, Tuktoyaktuk, Coppermine, Chesterfield Inlet, Coral Harbour, Cape Dorset, Port Harrison and Fort Chimo. Missions, assisted by government grants, also operate schools in many Eskimo settlements as well as two industrial homes, one at Chesterfield Inlet and the other at Pangnirtung, where aged and physically handicapped Eskimos are cared for. Considerable attention has been given in recent years to the study and conservation of the wildlife resources upon which the Eskimo depends for his livelihood. Game preserves have been established where only natives may hunt and trap and encouragement is given to the observance of hunting practices designed to conserve the supply of game and fish.

Section 17.—Statistics of World Population

The figures in the following table are from the United Nations *Statistical Yearbook 1953* and, except where otherwise indicated, are official mid-year estimates for 1952. Area figures include inland waters.

PART I.—IMMIGRATION AND EMIGRATION

Section 1.—Immigration*

A brief summary of the history of immigration is given in the 1948-49 Year Book, pp. 172-173. The following special article gives a picture of Canada's post-war achievements in the field of immigration.

POST-WAR IMMIGRATION

Canada is now well past the one-million mark in numbers of newcomers who, since the end of World War II, have chosen this country as their new place of permanent residence. As of June 30, 1954, the total number of immigrants entering since Jan. 1, 1946, was 1,043,911.

Historically, heavy immigration into Canada and periods of general progress in all fields of economic activity have often gone hand in hand. From 1900 to 1913, for example, immigrants entered Canada at a yearly average rate of nearly 200,000. During World War I, the yearly flow dropped to little more than 71,000. The prosperity of the 1919-30 period saw immigration increase to an annual flow of more than 123,000 but the depression of the 1930's resulted in drastic reduction to an average of approximately 16,000 annually. During World War II only slightly more than an annual average of 12,000 immigrants were received, but in the post-war years of expansion the annual average climbed to 120,000—an average monthly rate of 10,000 and a daily average of more than 329.

Almost one-third of these newcomers arriving in the Jan. 1, 1946 to June 30, 1954 period were British immigrants from overseas countries. Those of English origin numbered 207,325, Scottish 33,239, Irish 71,837 and Welsh 6,500, making a total of 318,901. Immigrants from overseas of northern European origins totalled 298,274, of whom 20,766 were French, 102,232 Netherlanders and 131,545 were of Germanic and Austrian origin. Those from the United States numbered 74,808. Of the remaining 351,928, there were 103,317 of Italian origin, and 58,785 were of Polish ethnic origin.

---

* Revised in the Immigration Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

Among the immigrants were 165,697 displaced persons and refugees, whose move to Canada was dictated initially by the motive of finding a country in the free world in which they could start life afresh. The great majority of the 1,043,911, however, emigrated to Canada only after serious consideration of all the factors involved in leaving situations that offered a certain amount of security and in pitting their skills and energies to the building of a new life with a more rewarding future.

Ontario drew by far the largest number of immigrants; on arrival, 542,542 immigrants gave that Province as their intended destination. Quebec absorbed 205,308 of the newcomers and British Columbia received the next largest group, 92,124. Other provinces received the following numbers: Alberta, 82,052; Manitoba, 53,020; Saskatchewan, 32,000; Nova Scotia, 20,577; New Brunswick, 11,644; Prince Edward Island, 2,332; and Newfoundland, 1,867. Four hundred and forty-five of the immigrants were bound for the Yukon or for the Northwest Territories.

Males out-numbered females among the immigrants by approximately 83,000 in the post-war flow—males numbered 563,300 and females 480,611. Most numerous among the adults were those in the age-group 30-39 who totalled 91,756, those in the 20-24 group numbered 87,707 and those in the 25-29 group 84,442. Children 14 years of age and under numbered 115,077.

Workers among the newcomers totalled 565,782 and with them came 478,129 dependants including 217,471 wives and 247,675 children. The other dependants were mainly aged parents.

The largest individual group among the 1,043,911 immigrants were skilled workers who, by filling vacancies for which Canadians could not be found and training young native-born workers to perform more complex operations, have helped to maintain and to accelerate Canada's industrial tempo. The approximate total of skilled workers was 142,000. About 128,000 immigrants went directly into jobs on Canadian farms and a high percentage of them have remained on the land. It is estimated that 10,000 have now succeeded in taking over Canadian farms either as outright owners or as tenants with agreements to purchase, which indicates the value accruing from the immigration of people with agricultural background.

Some 35,000 immigrants were listed in the managerial and professional category and this group included many of those who have succeeded in establishing business undertakings fostered by the combination of skills brought with them from their homelands and the will to succeed in this country. The sizes of these businesses, located in all parts of the country, range from an industry employing more than 4,000 workers to small-scale undertakings employing two or three to thirty or forty.

The impact on the Canadian economy of 1,000,000 new Canadians has been tremendous, comparable to that which would result from the sudden addition to the country of a province with a population considerably larger than that of Alberta as established by the 1951 Census. For example, during 1953 alone, immigrants brought with them to Canada an estimated $75,000,000, increasing to $415,000,000 the total of capital imported directly through immigration since Jan. 1, 1946.

At the date of the 1951 Census, 62,160 households had been established throughout Canada by post-war immigrant arrivals; 24,000 of these households were in homes owned by the newcomers and 7,000 of them were mortgage-free. Of the household units, 43,000 had either gas or electric ranges, 32,000 were equipped with power washing machines, and 52,000 had radios. Mechanical refrigeration served 26,000 households, and 18,000 units operated electric vacuum cleaners. One out of every three householders owned an automobile. Estimates of food costs in Canada on the basis of urban food expenditure sample surveys, indicate that the average food expenditure per person, weekly, is about $6.70. Thus the 1,000,000 new consumers spend approximately $6,700,000 each week or $350,000,000 annually for food alone. Consider also the purchase of clothing, furniture, farm machinery and other products on the Canadian market by 1,000,000 immigrants, and some conception of the magnitude of their tangible contribution to domestic trade and industry may be obtained.

Immigrants have also made rich contributions to Canada's musical and artistic life. They are to be found in responsible positions in hospitals and laboratories, adding their skill and knowledge to the processes of healing. In Canadian universities and schools, immigrant students are gaining their share of scholarships and prizes for academic merit. These contributions cannot be measured in terms of dollars and cents; their full value will be recognized more by future generations than they are by Canadians of the present day.

Immigration Policy and Operation.—The post-war immigrants were brought to Canada through a flexible immigration policy administered for the Federal Government by the Immigration Branch of the Department of Citizenship and Immigration. The regulations established by authority of the recently revised Immigration Act give right of entry only to British subjects, United States citizens, and citizens of France provided they are of good health and character and have sufficient means to maintain themselves until they are established in this country. All others, with the exception of Asians, whose admission is covered by established procedures, are admissible if they are found to be suitable and desirable. Suitability and desirability are established in part by social, economic and labour conditions in this country. Prospective immigrants should be of a type that will become readily integrated into the community and that will be able to assume the duties and responsibilities of Canadian citizenship within a reasonable time after admission.

To implement these regulations, the Immigration Branch maintains examining officers at 20 overseas posts: at London, Liverpool, Glasgow and Belfast in the United Kingdom; at Dublin, Republic of Ireland; and at Paris, Brussels, Berne, The Hague, Oslo, Copenhagen, Stockholm, Helsinki, Hanover, Karlsruhe, Linz, Rome, Athens, New Delhi and Hong Kong. Personnel at these posts are continually advised of economic conditions and settlement possibilities in Canada and, through a system of rotation and training, are returned to Canada from time to time for cross-country tours which enable them to keep up with developments. Specially trained officers are directly engaged in placement and settlement work in Canada, and close liaison is maintained between overseas posts and the various immigration offices in Canada. There are 344 ports of entry on both coasts and along the International Boundary to handle the immigration movement and, in addition, the heavy tourist traffic.

Subsection 1.—Immigration Policy and Administration

The subject of immigration policy and the administration thereof is dealt with briefly in the special article above.

Subsection 2.—Immigration Statistics

Table **1** presents statistics of immigration to Canada from 1909 to 1953. Analyses showing country of last permanent residence, sex, age, marital status, birthplace, origin, nationality, destination and occupation for recent years are given in Tables **2** to **8**.

1.—Immigrant Arrivals, 1909-53

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1908 in the 1948-49 edition, p. 175.

[1] In both Europe and Asia; includes Estonia, Latvia and Lithuania.

[2] Includes U.S.A. citizens on permit but applying for permanent residence.

Sex, Age and Marital Status.—Of the total immigrants 18 years of age or over entering Canada in 1953, 55 p.c. were males. Before 1931, adult male immigrants normally exceeded females in number, but from 1931 to 1946 female immigrants out-numbered male immigrants almost consistently, particularly in 1945 and 1946 when the wives of Canadian service men were coming in. From 1947 to 1950 adult males again exceeded females by from 10 to 27 p.c., in 1951 by 80 p.c., in 1952 by 24 p.c. and in 1953 by 21 p.c.

Throughout the years the sex distribution of immigrants under 18 years of age has been fairly even. In 1953, of the 44,174 persons in this class, 38,321 were under 15 years of age.

Of the total male immigrants in 1953, 39 p.c. were married and 60 p.c. single, the remainder being widowed or divorced; the percentages for married and single female immigrants were 45 and 50, respectively.

3.—Sex Distribution of Immigrants as Adult Males, Adult Females, and Children, 1944-53

Note.—Figures for 1930-43 are given in the 1946 Year Book, p. 183.

Year	Adult Males	Adult Females	Under 18 Years		Total
			Males	Females	
	No.	No.	No.	No.	No.

Birthplace.—British-born immigrants to Canada in 1953 numbered 47,662 and made up 28 p.c. of the total immigration; the increase over 1952 amounted to 6 p.c. Immigrants born in Continental Europe totalled 106,387, constituting an increase of 1 p.c. over the previous year. They accounted for 63 p.c. of the total immigration compared with 64 p.c. in 1952. Of the 106,387, 25·2 p.c. were born in Germany, 22·6 p.c. in Italy and 18·7 p.c. in The Netherlands. The number of United States-born immigrants in 1953 was slightly lower than in 1952, accounting for 4·4 p.c. of the total as compared with 4·6 p.c. in the previous year.

5.—Birthplaces of Immigrant Arrivals, 1951-53

Intended Destination and Occupation.—Experience has shown that not all immigrants reach the province of intended destination or follow intended occupation. Table 8 gives intended destination and occupation as stated by the immigrants entering Canada in 1953. Of the total immigrants, 43 p.c. were dependent wives and children, 10 p.c. were classed as farm workers, 16 p.c. as manufacturing, mechanical and construction workers, 6 p.c. as general labourers and 5 p.c. were in the professional class.

Of the total female immigrants, aside from dependent wives and children who accounted for 66 p.c., domestic servants comprised the largest part of the service occupational class which was followed by the clerical and professional classes.

8.—Intended Destinations and Occupations of Immigrants Admitted to Canada, 1953

Returning Canadians.—The numbers of Canadians who returned to Canada during the years 1947 to 1953 after having resided in the United States were as follows: 1947, 8,970; 1948, 5,678; 1949, 4,050; 1950, 3,518; 1951, 3,635; 1952, 4,707; and 1953, 4,606.

Section 2.—Emigration

Emigration from Canada is an important factor tending to offset to some extent both present and past immigration activities. The movement to the United States of native-born Canadians as well as of Europeans who originally migrated to Canada attained considerable proportions at certain periods. The figures of Table **10**, showing the numbers of persons entering the United States from Canada during the years 1944-53, were obtained from the Immigration and Naturalization Service of the United States Department of Justice. No Canadian statistics on emigration are available.

PART II.—CANADIAN CITIZENSHIP*

An outline of early naturalization procedure and events leading to the passing of the Canadian Citizenship Act is given in the 1951 Year Book, pp. 153-155.

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and to provide an underlying community of status for all the people of Canada, helping to bind them together as Canadians. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act with the changes occasioned by the 1953 amendments are outlined in the following paragraphs.

Natural-Born Canadian Citizens.—The Act defines the status of natural-born Canadians before and after the coming into force of the Act, including persons born in and outside of Canada and those born on a Canadian ship or aircraft. A person born outside of Canada out of wedlock is a Canadian citizen if his mother was born in Canada, or on a Canadian ship or aircraft, or was a British subject with Canadian domicile, and had not become an alien. A person born outside of Canada of a Canadian parent before Jan. 1, 1947, is not a Canadian citizen unless, at the commencement of the Act, he had been admitted to Canada for permanent residence, or was a minor. If he were born on or after Jan. 1, 1947, he is not a Canadian citizen unless, within a two-year period following his birth, or within such extended period as may be authorized in special cases by the Minister of Citizenship and Immigration, his birth is registered with an official Canadian representative abroad, or with the Minister. In addition, a person who is a Canadian citizen born abroad ceases to be a Canadian citizen upon the date of the expiration of three years after the day on which he attains the age of 21 years, unless he has his place of domicile in Canada on such date or has, before such date and after attaining the age of 21 years, filed, in accordance with the regulations, a declaration of retention of Canadian citizenship. A Canadian citizen, whether he is abroad or at home, may obtain a certificate of proof of his Canadian citizenship upon payment of a fee of $1.

---

* Prepared in the Canadian Citizenship Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

British Subjects, Commonwealth Citizens, Citizens of the Republic of Ireland and Canadian Citizens.—The Citizenship Act states that a Canadian citizen is a British subject. Before the passage of the Act, he could not, officially, describe himself as a Canadian citizen because the official designation for a Commonwealth citizen was *British Subject.* Now, he may officially call himself a *Canadian.* The authority for this procedure is found in Sect. 3 of the Act, which reads:—

> "Where a person is required to state or declare his national status, any person who is a Canadian citizen under this Act shall state or declare himself to be a Canadian citizen and his statement or declaration to that effect shall be a good and sufficient compliance with such requirement."

Non-Canadian British subjects continue to have the right to vote in federal, provincial and municipal elections, but they are not Canadian citizens until they have lived five years in Canada. Those who had that residence (Canadian domicile) on Jan. 1, 1947, are Canadian citizens, and those who attain it after that date must apply for certificates of citizenship before being granted the status of Canadian citizens. Citizens of the Republic of Ireland, who are not British subjects, have the same rights, in Canada, as a British subject.

Canadian Citizens other than Natural-Born.—Under the Act, persons naturalized in Canada before Jan. 1, 1947, and British subjects who had Canadian domicile at the commencement of the Act are Canadian citizens. The Act also defines the status as Canadian citizens of women and children, other than natural-born, and the manner in which they would have acquired Canadian citizenship.

Reinstatement of Persons of Canadian Origin Naturalized Outside of Canada.—By the amendment of July 20, 1950, the Minister may, in his discretion, grant a certificate of citizenship to a person who was a natural-born Canadian, or who was a British subject of Canadian origin, and who lost such status by naturalization outside of Canada or for any reason other than marriage. The qualifications include continuous residence in Canada for a period of one year immediately preceding the date of the application as well as certain other requirements.

Status and Procedure of Non-Canadians to Canadian Citizenship.—Any person who is not a Canadian citizen or is not otherwise a British subject may file his application for citizenship with the court of the county or district in which he resides if he has met the following requirements:—

(1) He must have acquired Canadian domicile as defined in the Immigration Act, which states in part, "Canadian domicile is required for the purposes of this Act by a person having his place of domicile for at least five years in Canada after having been landed in Canada". There are three important exceptions to the requirements of Canadian domicile [Sect. 10 (1) (c) of the Canadian Citizenship Act]: (*a*) under certain circumstances, a person who has served outside of Canada in the Canadian Armed Forces; (*b*) the wife of a Canadian citizen, provided she has been legally admitted to Canada for permanent residence; and (*c*) a person who had a place of domicile in Canada for 20 years immediately before the first of January 1947 and was not under an order of deportation on that date.

(2) He must have lived in Canada for at least a year *immediately* before the date of his application.

(3) He must be of good character.

(4) He must have an adequate knowledge of the English or French language. There is one exception to this requirement: a person who has lived in Canada for 20 years or more is *not* required to have a knowledge of either language.

(5) He must have an adequate knowledge of the responsibilities and privileges of Canadian citizenship.

(6) He must intend to make his permanent home in Canada.

(7) He must be at least 21 years old or the spouse of and reside in Canada with a Canadian citizen.

The filing of a Declaration of Intention is no longer a requirement under the Act. If, however, a person, who has been legally landed, wishes to file such a Declaration he may do so, using the prescribed form. The Declaration may be filed with the clerk of the court of the county or district where the declarant lives; with a citizenship officer, or with the Registrar of Canadian Citizenship, Ottawa. There are no restrictions with respect to age.

When the judge has given his decision, the papers and the decision are forwarded to the Minister of Citizenship and Immigration who may, in his discretion, grant a certificate of citizenship. When a certificate is granted, it is forwarded to the clerk of the court, who then notifies the applicant to appear in court for the purpose of taking the Oath of Allegiance and Declaration of Renunciation of Foreign Allegiance and receiving his certificate of citizenship.

If the application is rejected by the court or by the Minister, the applicant must wait two years before filing a new application.

Status of Married Women.—A Canadian woman does not lose Canadian citizenship upon marriage to an alien, and a non-Canadian woman does not become a Canadian citizen upon marriage to a Canadian citizen. In the former case, she may file with the Minister a Declaration of Renunciation of Canadian Citizenship if she has acquired her husband's nationality, and she thereupon ceases to be a Canadian citizen. In the latter case, a non-Canadian woman must apply to the court for a certificate of citizenship. If she is a citizen of another Commonwealth country, she may apply direct to the Minister. The one concession as to qualifications is a residence of only one year in Canada.

A woman of Canadian origin who ceased to be a British subject by reason only of her marriage to an alien prior to Jan. 1, 1947, may regain her status and be granted a certificate of citizenship upon application direct to the Department of Citizenship and Immigration. She need not be a resident of Canada and no special qualifications are required.

Status of Minors, Foundlings, Posthumous Births, etc.—The Minister may, in his discretion, grant a certificate of citizenship to a minor child of a person who is a Canadian citizen, other than a natural-born Canadian citizen, on the application of the said person, provided he or she is the responsible parent of the child and further provided that the child has been lawfully admitted to Canada for permanent residence and, if 14 years of age or more, has an adequate knowledge of the English or the French language.

The Minister may also grant a certificate to a minor in any special case whether or not the conditions required by the Act have been complied with. Every foundling, who is or was first found as a deserted infant in Canada, shall, until the contrary is proved, be deemed to have been born in Canada. Where a child is born after the death of his father, the child shall, for the purposes of definition of natural-born Canadian citizens, be deemed to have been born immediately before the death of the father.

Children of Diplomatic Representatives in Canada.—The amendment of July 20, 1950 (effective Jan. 1, 1947), excludes from the status of natural-born Canadian citizens the children born in Canada of parents who, at the time of the birth, are the diplomatic or consular representatives of foreign countries in Canada, or who are employees in the service of such representatives and citizens of the countries represented.

Adopted or Legitimated Persons.—Effective July 20, 1950, the Act provides that certificates of Canadian citizenship may be granted to adopted or legitimated persons who have been admitted to Canada for permanent residence if the adopter, or the legally recognized father, is a Canadian citizen.

Certificate in Case of Doubt.—A certificate may be granted for the purpose of removing any doubts as to whether the person to whom it is granted is a Canadian citizen, and it is specifically provided that the granting of the certificate shall not be deemed to establish that the person to whom it is granted was not previously a Canadian citizen.

Protection of Status Prior to the Canadian Citizenship Act.—Sect. 44 of the Act provides that, notwithstanding the repeal of the Naturalization Act and the Canadian Nationals Act, the Canadian Citizenship Act is not to be construed or interpreted as depriving any person who is a Canadian national, a British subject or an alien as defined in the said Acts, or in any other law in force in Canada, of the national status he possessed at the time of the coming into force of this Act.

Loss of Canadian Citizenship.—Canadian citizenship may be lost for the following reasons:—

(1) A Canadian citizen who, when outside of Canada and not under disability (minor, lunatic or idiot), acquires, by a voluntary and formal act other than marriage, the nationality or citizenship of a country other than Canada. This does not apply if that country is at war with Canada at the time of acquisition but, in such a case, the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.

(2) A Canadian citizen who, under the law of another country, is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.

(3) A Canadian citizen who, when in Canada, acquires voluntarily the citizenship of a foreign country (other than by marriage) may be deprived of his Canadian citizenship by Order of the Governor in Council, on recommendation of the Minister.

(4) A Canadian citizen, other than natural-born or one who has served in the Armed Forces of Canada in time of war, who resides outside of Canada for ten consecutive years without maintaining substantial connection with Canada, loses his citizenship automatically, but the period of absence may, upon application, be extended beyond the ten years for good and sufficient cause.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—The citizenship of a Canadian citizen, other than a natural-born Canadian citizen, may be revoked by the Governor in Council for such reasons as trading or communicating with an enemy country during time of war; disaffection or disloyalty while out of Canada or who, while in Canada, has, by a court of competent jurisdiction, been convicted of any offence involving disaffection or disloyalty; obtaining a certificate of naturalization or Canadian citizenship by false representation or fraud; residence outside of Canada for not less than six years (without maintenance of substantial connection) since becoming a Canadian citizen or being naturalized in Canada; residence for not less than two years (without maintenance of substantial connection) in a *foreign* country of which he was a national or citizen at any time prior to his becoming a Canadian citizen or being naturalized in Canada.

Loss of Citizenship by Revocation—Applicable to Both Natural-Born and Naturalized Persons.—The Governor in Council may, in his discretion, order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration, he is satisfied that such person has, when not under a disability, (1) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (2) made a declaration renouncing his Canadian citizenship.

Loss of Citizenship in Relation to Women.—In the case of marriage, a woman who is a Canadian citizen does not lose the status of a Canadian citizen unless, having on marriage acquired her husband's nationality, she makes a declaration renouncing her Canadian citizenship.*

Section 2.—Canadian Citizenship Statistics

Citizenship of the Total Population.—Results of the 1951 Census show that 96·9 p.c. of all the people in Canada were Canadian citizens, that 0·7 p.c. were citizens of other Commonwealth countries, 1·7 p.c. of European countries, 0·1 p.c. of Asiatic countries, 0·5 p.c. of the United States and 0·1 p.c. of other countries. Table **1** shows the 1951 population classified by country of allegiance and origin. According to this table, 98·0 p.c. of the persons of British Isles origins and 99·7 p.c. of those of French origin owed allegiance to Canada. Corresponding percentages for other European and Asiatic origins were 89·3 p.c. and 78·7 p.c., respectively.

[1] Includes persons reported as "stateless". [2] Includes English, Irish, Scottish, Welsh and Manx. [3] Includes Danish, Icelandic, Norwegian and Swedish.

Citizenship Certificates Issued.—In 1953, 22,593 Canadian Citizenship Certificates were issued, 22,102 in English and 491 in French. Corresponding figures for 1952 were 20,506 certificates, 20,135 in English and 371 in French.

During 1953, the Canadian Citizenship Registration Branch recorded 2,402 certificates of registration of births abroad, 24,757 declarations of intention filed with the courts, 141 declarations of retention of citizenship and 44 declarations of resumption of Canadian citizenship. Certificates issued free to persons who had had active military service numbered 672. Corresponding figures for 1951 were 1,563 registrations of births abroad, 13,323 declarations of intention, 143 declarations of retention of citizenship, 76 declarations of resumption of citizenship and 1,646 certificates issued free to persons who had had active military service.

---

* The foreign countries, under the laws of which a woman does not acquire the citizenship of such countries on marriage, are: Argentina, Brazil, Chile, Colombia, Ecuador, Guatemala, Morocco, Israel, Panama, Paraguay and Uruguay.

Characteristics of Persons Granted Citizenship in 1953.—Detailed statistics showing the characteristics of aliens* (non-British subjects) granted citizenship certificates became available for the first time in 1952; such characteristics included age, marital status, occupation, period of immigration, residence, as well as previous nationality. The characteristics of British subjects granted certificates were also recorded and certain of these are shown separately for 1953 in Tables **3** to **7**.

Of the total non-British subjects granted citizenship in 1953, 47·3 p.c. had immigrated to Canada after the end of World War II and 40 p.c. had immigrated before 1931. Regionally, these new Canadians were distributed as follows: 1·9 p.c. in the Atlantic Provinces, 16·9 p.c. in Quebec, 44·6 p.c. in Ontario, 20·3 p.c. in the Prairie Provinces and 16·2 p.c. in British Columbia. Just over 82 p.c. of them resided in urban centres as compared with 62 p.c. of the total population at the date of the 1951 Census.

More than 60 p.c. of the non-British subjects naturalized in 1953 were males. Young persons under 20 years of age constituted 7 p.c. of the total, 48 p.c. were 20 to 44 years of age, 37 p.c. were 45 to 65 years of age and 8 p.c. were over 65. Almost one-quarter of them formerly owed allegiance to Poland and about two-thirds of these persons were males, the majority of whom were recent arrivals in Canada. The next largest group formerly owed allegiance to China, and most of that group had been in Canada for many years.

About 19 p.c. of the males were employed in manufacturing occupations, 12 p.c. in service fields, 11 p.c. in agriculture, 11 p.c. in labouring occupations and 10 p.c. in proprietary and managerial occupations. About 73 p.c. of the females were homemakers.

---

* Includes all aliens granted Certificates in 1953. In addition to those classified under Sect. 10 (1) of the Citizenship Act 1947, as shown in Table 2, they include the totals shown in Sects. 10 (3) and 10 (4), and a number of those in Sects. 10 (5), 11 (2) and 11 (3).

Section 8. Communicable Diseases	227

Note.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

This Chapter of the Year Book is intended to provide a broad summary of the main trends in the registration of births, marriages, and deaths in Canada during the past 30 years, to compare the principal Canadian vital statistics rates or indices with those for other countries and to provide lay readers and students of demography, public health, sociology and other related fields with basic Canadian vital statistics data. Detailed data are available from regular DBS annual reports, notably *Vital Statistics* (Preliminary Report) and *Vital Statistics of Canada.* Certain unpublished data are also available on request. The history of the collection of vital statistics in Canada is covered in the 1948-49 edition of the Year Book, pp. 185-188.

Births and deaths are classified by place of residence (births are classified according to the residence of the mother) and marriages by place of occurrence.

The population data upon which the rates shown in this Chapter are computed are contained in Chapter III (Population) and in the several DBS reports relating to census and intercensal estimates of population.

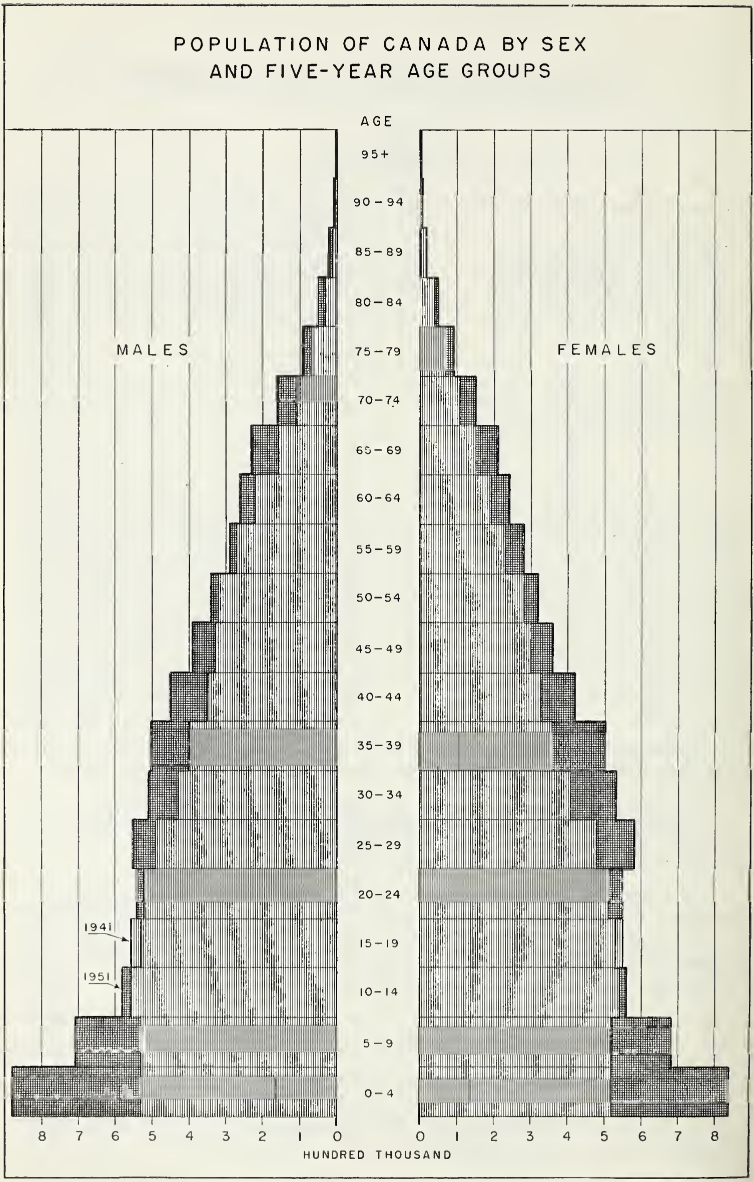
In comparing the birth, death and marriage rates by provinces, it is important to bear in mind that part of the differences observed may be caused by differences in the sex and age distribution of their populations. Similarly, changes in these rates may be owing partly to changes in this distribution. These remarks apply also to international comparisons of birth, death and marriage rates.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary of the principal vital statistics of the provinces of Canada from 1921 when the system of collection of national statistics was initiated and Table 2 shows certain vital statistics for urban centres having at least 10,000 population at the date of the 1951 Census.

---

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.



This Chart shows the age–sex distribution of the population at the 1941 and 1951 Censuses, as an illustration of how that distribution may change within a short period of time. Such changes can have a very significant effect on vital statistics rates.

[1] Registration area only.

[2] Excludes infants who were born alive but died before registration of birth.

Canadian Births.—In Canada, the birth rate in 1921 was 29 per 1,000 population. As a rate of 35 per 1,000 is very high for countries of modern western civilization, the Canadian birth rate had probably not fallen far or for long before 1921. It fell continuously until 1937 when it was 20 per 1,000 but then, owing to economic recovery and the War, it rose to 22 in 1940, to 24 in 1943 and reached its highest point in 1947 at 28·7. As was the case in most other countries, there was a slight decline in 1948 but the Canadian rate remained remarkably steady at just over 27 for the four years 1948 to 1951. However, it rose to 27·9 in 1952 when, for the first time, more than 400,000 births were registered. The birth rates in the provinces followed the same general trend with a similar increase in the 1952 rate.

It has always been assumed that the Province of Quebec has had the highest birth rate in Canada, but Table **1** shows that since the late 1930's or early 1940's Newfoundland and New Brunswick have had higher birth rates than Quebec. In 1952 Newfoundland had a crude rate of 33·6, New Brunswick 31·7 and Quebec 30·3; British Columbia had the lowest rate at 24·9. However, these crude rates are based on total population and therefore do not reflect the fertility of the women who are of reproductive age in the different provinces. A more accurate measure of fertility is the rate based on the number of married women in the population in the reproductive age group, 15 to 49. The following are birth rates per 1,000 married women in the age group 15 to 49, by province:—

Newfoundland..........	220	Quebec.................	193	Alberta................	160
Prince Edward Island...	186	Ontario.................	138	British Columbia.......	130
Nova Scotia............	162	Manitoba...............	147	CANADA (Exclusive of the Territories).......	160
New Brunswick........	200	Saskatchewan..........	155		

On this basis, Newfoundland still had the highest birth rate, followed by New Brunswick and Quebec, and British Columbia had the lowest rate.

Sex of Live Births.—Wherever birth statistics have been collected, they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada in 1941-52 varied between 1,051 and 1,067. In 1952 there were 1,064 males born for every 1,000 females. Variations in the provincial sex ratios are due to chance variation because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year.

Hospitalized Births.—In 1952 over 81 p.c. of all Canadian births occurred in hospital. Although the proportions of hospitalized births have increased steadily since 1921 in all provinces, these proportions still vary widely. The existence of prepaid or provincially sponsored hospital, maternity or medical-care plans in some provinces, the unavailability of hospital facilities in others, particularly in remote rural areas, and preference for home delivery in some local areas are among the factors accounting for provincial variations in this respect. The noticeable increases in hospitalized births within recent years in those provinces that previously had the lowest proportions may be partly the result of increased hospital services and facilities being provided in those areas.

Births in Urban Centres.—Table 2 shows the number of births, regardless of where they occurred, to mothers residing in urban centres of over 10,000 population. (Pp. 189-191.)

Illegitimacy.—In 1952 less than 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world. In the 5-year period 1926-30 it was 3 p.c., whereas the average of the ten years 1943-52 was just over 4 p.c. The apparent increase was partly the result of more complete registration of illegitimate births brought about by the co-operation of provincial registration officials and social welfare agencies.

Stillbirths.—The rate of stillbirths has been falling since 1926, though not equally in all provinces. The rate of stillbirths to unmarried mothers has always been considerably higher than that for married mothers, and consequently higher than the over-all rate; but this difference has been disappearing in recent years.

¹ Figures for Newfoundland are included for 1951 and 1952 only. ² Exclusive of Newfoundland.

Multiple Births.—Approximately one confinement in 85 in Canada results in the birth of more than one child. In the period 1926-52 there have been 87,057 such confinements, of which 86,267 were twins and 780 were triplets. There have been nine sets of quadruplets and one set of quintuplets, the Dionne quintuplets who were born in 1934.

The proportion of stillbirths is higher among multiple than among single births. It is about twice as high for twins and between three and five times as high for triplets.

Fertility Rates.*—Sex and age distribution of the population is an important factor in determining birth, death and marriage rates. Since more than 95 p.c. of children are born to women between the ages of 15 and 50, as was noted earlier, variations in the proportion of women of these ages to the population as a whole will cause variations in the birth rates of different countries or regions, even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have, therefore, been devised. The best known of these are age-specific fertility rates and reproduction rates.

Ages of Parents.—Ages of the parents is an important variable in any analysis of birth statistics. The numerical and percentage distribution of legitimate live births by the ages of the parents is given for 1941, 1951, and 1952 in Table **9**, of illegitimate live births by the age of the mother in Table **10**, and of stillbirths by the age of the mother in Table **11**, as well as the average ages of the parents for each year shown.

Besides the fertility rates at each age, three other factors help, in the main, to determine the average age of parents having children: firstly, the average age of potential parents, at any point in time, that is, of the population between the ages of 15 and 50; secondly, the average age of couples at marriage; and thirdly, the proportions of first and second births to total births. Other things being equal, a high proportion of first and second births will result in a lower average age of parents. In 1930-32, first and second births were 43 p.c. of the total births. By the period 1945-48, first and second births together were 57 p.c. of the total. This change is very great and accounts for the lower average age of parents in the latter period. However, by 1952 the proportion of first and second births had declined to about 53 p.c.

---

* This subject is treated in detail in DBS report, *Gross and Net Reproduction Rates, Canada and the Provinces*, and is available on request.

These tables illustrate other significant facts: that the average age of fathers of legitimate children is about four years higher than the average age of mothers; that the average age of mothers of illegitimate children is four to five years lower than the average age of mothers of legitimate children—in 1930-32 the difference was six years (the fact that about 70 p.c. of illegitimate children are born to mothers under 25 years of age accounts for this difference); and that the average age of mothers of stillborn children is higher than that of the live born. Further, Table **11** shows that the rate of stillbirths per 1,000 live births increases with the age of the mother. It is over three times as high among mothers of 40-44 years and over four times as high among mothers of 45-49 years as it is among mothers at the ages of 20-24.

Order of Birth.—Table **12** shows the order of birth of all live-born children according to the age of the mother. About 28 p.c. of live-born children in 1952 were first children. Among the illegitimate about 70 p.c. were the first born.

Section 3.—Deaths

Declines in the death rate have been recorded in many countries during the past twenty years. Crude death rates should be used with caution in comparing the mortality levels of different populations, for they are affected by differences in the age composition of the population as well as by differences in the levels of mortality.

Subsection 1.—General Mortality

International Comparisons.—A comparison of the death rates in Canada and the provinces with those in certain other countries is shown in Table **13**. It will be noted that the death rate for Canada is among the lowest in the world and that the majority of the provinces have lower rates than most other countries.

13.—Death Rates per 1,000 Population in Selected Countries compared with Canada and the Provinces, 1952

(Source: *Monthly Bulletin of Statistics of the United Nations* and other official publications. Provisional data are used where certain final figures are not available.)

Country or Province	Death Rate	Country or Province	Death Rate	Country	Death Rate

[1] Excludes infants who were born alive but died before registration of birth. [2] Registration area only.

Canadian Mortality.—Since 1931, the Canadian death rate has fluctuated between 10·3 and 8·7 per 1,000 of the population, declining in recent years and reaching a record low of 8·7 in 1952. As shown in Table **1**, pp. 187-189, this decline has been apparent in all provinces but in varying degrees. The generally low rates in the Prairie Provinces are partly the result of their younger average population and the uniformly higher rate in British Columbia is the result of the increasing proportion of people in the older age groups.

Sex and Age Distribution of Deaths.—Despite reductions in infant mortality over the past 25 or 30 years, more deaths still occur in the first year of life than in any other single year. Of the 107,000 deaths occurring in 1926, 31,000 or almost 30 p.c. were of children under five years of age, and three-quarters of those were of children under one year of age. In 1952, of the nearly 126,000 deaths, almost 18,000 or a little over 14 p.c. were of children under five years and five-sixths of those were under one year. Most of the reduction took place among children over one month of age but there was a notable decrease as well in all childhood ages up to five years.

Tremendous reductions have taken place in the mortality pattern since the early 1920's, with the most important reductions in the childhood and early adult ages. In 1926, over 19 p.c. of all male deaths were of persons five to 45 years of age; in 1952, these accounted for about 11 p.c. of total deaths. The reduction in mortality among females in this age group is equally remarkable, the proportion dropping from 22 p.c. to 10 p.c. Death rates for males up to age 45 have been roughly halved during the past 25 years; those for females, in the same ages, have been reduced as much as three to four times.

These reductions in the mortality rates in early and middle years of life have, of course, had the effect of increasing the number of people in the older age groups and of raising the average age of the population as a whole. As a natural consequence, much larger proportions of deaths are now occurring at the older ages. Further, the reductions in rates will eventually raise the average age at death. In 1921, the average age at death of males was 39·0 years and of females 41·1 years; by 1952 this had advanced to 55·8 and 58·2, respectively. These trends are indicated clearly in Table **14**.

[1] Excludes the Province of Quebec.

Deaths in Urban Centres.—In Table **2** (pp. 189-91) deaths are classified by place of residence of the decedent. Death rates in urban centres vary only slightly from those of their respective provinces. However, owing to the influx of young people from the rural areas, the age distribution of the population in urban centres is often more favourable to a low death rate than that of the province as a whole.

Causes of Death.—Table **15** shows the deaths in Canada, grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. are in the following groups of causes: diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases — tuberculosis, pneumonia and influenza — and nephritis.

The rise in the average age at death has already been noted (p. 200). Causes of death that mainly affect children and young adults have declined. Diphtheria, for example, has been almost wiped out and tuberculosis has been greatly reduced. On the other hand, the ageing of the population increases the proportion of deaths from certain causes that affect older people. Thus, cancer and the diseases of the cardio-vascular-renal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the early and young adult years of life. They have similarly served to emphasize the emergence of the chronic and degenerative conditions of later life as the targets towards which the public health programs of the future will be directed. In effect, Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

Table **16** shows the comparison of deaths by causes, in Canada for the years 1950 to 1952 and the Chart on p. 206, "Major Causes of Death", shows graphically the death rates for the major cause groups.

Subsection 2.—Infant Mortality

International Comparisons.—The completeness of registration of live births and infant deaths varies from country to country and there is some evidence that the under-registration of deaths is proportionately greater for infants than for other ages. The reliability of the basic data should, therefore, be kept in mind when comparing the rates. Despite these variations, the Canadian rate as well as the rates for some of the provinces appear to be considerably higher than those for many other countries of the world.

17.—Infant Mortality per 1,000 Live Births in Selected Countries compared with Canada and the Provinces, 1952

[1] 1951. [2] Excludes infants who were born alive but died before registration of birth. [3] Registration area only.

Canadian Infant Mortality.—Table 1, pp. 187-189, shows the striking improvement that has taken place in the rate of infant mortality during the past 25 years. Of the 1,155,000 children born in 1950-52, approximately 45,000 died and 62,000 lived to their first birthday who would have died at the rate prevailing in the period 1926-30.

As illustrated in Table **18**, infant mortality of males is 25 to 30 p.c. higher than that of females for Canada as a whole, with wider variations for the individual provinces. As pointed out earlier, there were between 1,051 and 1,067 males born to every 1,000 females in the 1941-52 period. Because male infant mortality is higher, the excess of males is reduced drastically by the end of the first year. For example, in 1950-52, 593,810 male children were born compared with 559,889 female children, an excess of 33,921 or 6·6 p.c.; 25,882 male children died during their first year compared with 19,329 female children, that is, 6,553 more. The excess of males at one year of age was thus reduced to 27,368 or 5·6 p.c.

As indicated in Tables **1** and **18**, infant mortality rates vary considerably from province to province. One of the principal causes of these variations appears to be the different proportions of births that take place in hospital or under proper medical care (*see also* p. 193). Along with increased hospitalization has come better and more widespread pre-natal and post-natal care. Other factors have also been important, particularly the supervision of water supplies, improved sanitation, the pasteurization of milk and the use of antibiotics.

LEADING CAUSES OF INFANT DEATHS

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table **2** (pp. 189-191), many cities and towns have, however, maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Causes of Infant Deaths.—Of the 15,303 infant deaths in 1952, almost 15 p.c. were due to congenital malformations; 14 p.c. to immaturity; over 10 p.c. each to pneumonia among infants over four weeks of age and injury at birth; and about 8 p.c. to post-natal asphyxia and atelectasis. These specific causes accounted for 57 p.c. of the total infant deaths. The Chart, "Leading Causes of Infant Deaths", shows the relative importance of the major causes of infant death, and the Chart, "Infant Deaths", shows the comparative numbers of children dying at each month of age. Table **19** shows infant deaths by cause and province and Table **20** gives comparative totals for each cause for the years 1950-52.

[1] Less than one per 100,000 live births.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 187-189, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths has declined steadily since about 1930 (when there were 1,215 deaths and a rate of almost five deaths for every 1,000 live births) to 349 in 1952. Since 1945, the rate of maternal mortality has dropped below two per 1,000 live births and was under one per 1,000 live births in 1952. Mortality among unmarried mothers is higher than among married mothers.

Age at Death.—Table 21 shows the distribution of maternal deaths by age groups and average age at death. The latter is slightly more than two years higher than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show that age is a most important factor in maternal mortality. Though all the rates are much lower than they used to be, the inequalities between the age groups remain (*see* Chart, "Maternal Deaths"). The rate at 30-34 years is more than twice as high as the rate at 20-24 years, and at 40-44 years it is over eight times as high. The higher rate for the "under 20" age group, compared with the age group 20-24, is owing to the high proportion of illegitimate children born to young mothers in the "under 20" group.

21.—Maternal Mortality and Rates per 1,000 Live Births, by Age Group, 1931, 1941 and 1952

Causes of Maternal Deaths.—Tables **22** and **23** show, by cause, the numbers and rates of maternal deaths per 100,000 live births. Until a decade ago, puerperal sepsis and toxæmias of pregnancy were by far the most important causes. Since 1936, the rate for puerperal sepsis has been reduced by almost 95 p.c. owing in large measure to the use of sulpha and other antibiotics. Although there has been a reduction of over 70 p.c. since 1936 in the maternal death rate from toxæmias of pregnancy, this group still remains a major cause of maternal deaths, second only to complications of delivery.

[1] Less than one per 100,000 live births.

Section 4.—Natural Increase

In 1926-30, the rate of natural increase in Canada (excess of births over deaths) was 13 per 1,000 population. Owing partly to the depression, the birth rate declined more than the death rate and the rate of natural increase fell to 9·7 in 1937. Since then the rate has increased to 12·6 in 1940-42, 14·6 in 1945, 17·6 in 1946 and 19·3 in 1947. The rates of 17·8 in 1948, 18·1 in 1949, 18·1 in 1950, 18·2 in 1951, and 19·2 in 1952 were lower owing to increases in total deaths in recent years.

Table 24 shows that the rates of natural increase in the provinces followed generally the rate for Canada as a whole. In earlier years, Saskatchewan and Quebec had the highest rates. The high rates in all the Prairie Provinces were owing partly to their relatively younger populations and consequent low death rates. In Quebec, on the other hand, the death rate in 1926-30 was high; it has declined steadily since. Owing to high birth rates, Newfoundland and New Brunswick have had the highest rates of natural increase in Canada in recent years. (*See* Chart, "Birth, Death and Natural Increase Rates", p. 218.)

The rates are generally higher for females than for males because death rates for males are higher than for females. In the western provinces particularly, the fact that the ratio of males to females in the total population is higher than in other parts of Canada tends to lower the rate of natural increase.

In a country such as Canada with a fairly young population and where immigration has been large, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is towards an eventual excess of females in the total population as there now is in most European countries—unless immigration raises the male ratio.

BIRTH, DEATH AND NATURAL INCREASE RATES

Saskatchewan	8·2	Scotland	8·0	Ireland	5·3
		England and Wales	7·9	Venezuela	4·8
		Finland	7·9	Peru	2·9

[1] 1951.

As a rule, marriage rates vary with the level of economic prosperity. In Canada, England and the United States, the number of marriages was exceptionally high in 1940-42, decreased in 1943 and 1944 but increased in 1945 and 1946, reaching peak rates in the immediate post-war years.

Canadian Marriages.—Table **26** shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces. Percentages of brides and bridegrooms, according to place of birth, are also given. In 1952, for the country as a whole, about 84 p.c. of the grooms were born in Canada—69 p.c. in the province in which they were married. Almost 88 p.c. of the brides were born in Canada—75 p.c. in the province in which they were married. However, there are wide variations from this pattern as between provinces; as might be expected, in the older Atlantic Provinces and Quebec there is a greater tendency to marry native, or native and province-born partners than in the other provinces.

26.—Marriages and Marriage Rates, by Province, with Percentage Distribution of Bridegrooms and Brides by Nativity, 1921-52

Province and Year		Total Marriages	Rate per 1,000 Population	Born in Province Where Married		Born in Other Provinces		Born Outside Canada

[1] Excludes "not stated" birthplace.

[2] Excludes the Province of Quebec.

Age and Marital Status of Bridegrooms and Brides.—Over 91 p.c. of the marriages in 1952 were between persons who had not previously been married; 5 p.c. of the brides and grooms had been widowed, and more than 3 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors is lower than 27 years and that of spinsters lower than 24. The average age of widowers and widows at the time of re-marriage is double that of bachelors and spinsters. Nine out of ten spinsters married in 1952 were under 30 years of age—7 out of 10 under 25 years—and 8 out of 10 bachelors were under 30 and about one-half of the total were under 25 years of age as shown in Table 27.

27.—Numbers and Percentages of Bridegrooms and Brides, by Age and Marital Status, 1952

(Exclusive of the Territories)

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table **28** shows the very strong influence that religion has on marriage. About 71 p.c. of all marriages are between persons of the same religious denomination; among those of Jewish faith, it was 94 p.c. in 1952; among Roman Catholics 89 p.c.; United Church 62 p.c.; and Eastern Orthodox 58 p.c.

[1] Includes Greek Catholic.

[2] Percentage of marriages between contracting parties of the same religious denomination.

Subsection 2.—Dissolutions of Marriage (Divorces)

For many years after Confederation, the number of divorces granted in Canada was small. There were fewer than 20 divorces in every year before 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages.

After the end of World War I in 1918 the number of divorces increased. The generally unsettled conditions and the long separation of men on Active Service from their wives may have contributed to this increase. Changes in law and procedure may also have been a further factor—at present, Quebec and Newfoundland are the only provinces in which applicants for divorce must secure a private Act of Parliament. The number of divorces increased from 11 in 1900 to a peak of 8,199 in 1947, declining gradually after that year until in 1951 they numbered 5,263. The number rose again to 5,634 in 1952 and 6,055 in 1953.

---

[1] No fall term of court held in 1944; cases held over till January 1945. [2] By a new rule adopted in August 1948, a *decree nisi* became absolute at the end of three months and as a result a number of divorces did not become effective until the following year.

Section 6.—Vital Statistics of the Yukon Territory and the Northwest Territories

The vital statistics of Yukon Territory and the Northwest Territories have been collected since 1924. These statistics are not presented with those of the ten provinces in the tables of this Chapter because the figures for some of the early years are not considered complete in that the personal particulars frequently are not available, the small and varying population of each year is not accurately known and, as some areas are accessible only during the summer months, complete returns are not available sufficiently early in the calendar year for inclusion in the national totals for routine publication. A summary of the principal vital statistics for these Territories is presented in Table **30**.

30.—Vital Statistics of the Yukon and Northwest Territories, 1926-52

Note.—Figures for 1944-52 are by place of residence; for previous years by place of occurrence.

Section 7.—Canadian Life Tables

Three official life tables for Canada have been published: the first was calculated on the basis of the deaths of 1930-32 and the census population of 1931; the second on the basis of the deaths of 1940-42 and the census population of 1941 and the third was based on the Census of 1951 and deaths during 1950-52. In addition, tables have been computed for Canada as a whole for the years 1945 and 1947 based on estimated populations by sex and age and the deaths recorded as having occurred during those years. The life table values for 1951 are given in abbreviated form in Table **31**.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1951, of 100,000 males born, 4,325 died in their first year, so that 95,675 survived to one year of age; 326 died in their second year, so that 95,349 survived to two years of age; and so on. At 100 years of age, only 90 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

31.—Canadian Life Table, 1951

Mortality rates at all ages for males have almost consistently been higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. At the mortality rates in the 1951 Life Table (*see* Table **31**), about 15,000 males would have died before reaching age 50 as compared with only about 11,000 females, while only 55,000 of the original group of 100,000 males would have survived to age 70 as compared with about 66,500 women.

In 1951, life expectancy at birth reached new high records of 66·3 years for males and 70·8 for females, comparable to the expectancy for other countries of the world with highly developed medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child at present mortality risks may, on the average, expect to live an additional 68·3 years and a female 72·3 years, representing for an infant boy a gain of two full years more than its expectation at birth and 1·5 more years for an infant girl. The expectation of life of a 15-year-old boy is 55·3 more years; of a 15-year-old girl 59·2 years. At age 25 it is about 46 years for men and almost 50 for women and at age 70, 10·4 for men and 11·6 for women.

32.—Expectation of Life, 1931, 1941 and 1951

Age	1931		1941		1951	
	Male	Female	Male	Female	Male	Female
At birth	60·00	62·10	62·96	66·30	66·33	70·83

Table **32** summarizes the life expectancy figures extracted from the Canadian Life Tables for 1931, 1941 and 1951. During this period life expectancy at birth increased from 60 to over 66 years for men and from 62 to 70·8 years for women. This is a gain for males of 3·4 years since 1941 compared with a gain of almost

3 years in the previous decade; females on the other hand gained 4·5 years since 1941 compared with 4·2 years in the preceding decade. Thus, since 1931, 6·3 years have been added to male life expectancy, while female longevity has been lengthened by 8·7 years.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminishing with advanced age. For example, since 1931, 2·6 years have been added to the life expectancy of a 5-year-old male, 1·7 years to a 20-year-old, almost half a year to a 40-year-old and a bare quarter year to a 60-year-old as compared with 6·3 years for a newborn male. During this period, life expectancy for a 5-year-old female gained 5·6 years; for a 20-year-old 4·7 years, 2·7 years for a 40-year-old and 1·5 years for a 60-year-old as compared with 8·7 years for a newborn female.

Longevity has improved for both sexes but more so and at all ages for females, whereas there has been only slight improvement for males beyond middle life. Briefly the rapid decline in the death rate for infants of both sexes is continuing, with slower declines with advancing age, so that relatively stationary death rates have been established from about 50 onwards for males and from about 80 for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. It must be remembered that the arbitrary population of 100,000 of each sex has been subjected here to the mortality rates in effect in 1950-52, and their life expectancy computed as if those death rates at each age were to prevail during their life time. Actually the theoretical 200,000 infants born in 1950-52 will most probably have a pattern of survival and life expectancy quite different from that of the present life table since they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1950-52.

The improvement in life expectancy, particularly among children and adolescents is owing mainly to the substantial reduction, in recent years, of mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the last two decades. As roughly 12 p.c. of all annual deaths occur among infants, and an additional 70 p.c. among persons over 50, any further improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combatting diseases associated with middle and old age, such as cardio-vascular–renal conditions and cancer.

Section 8.—Communicable Diseases

Statistics and information on communicable diseases can be found under "Notifiable Disease Statistics", Chapter VI, Public Health, Welfare and Social Security, on pp. 246-249.

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

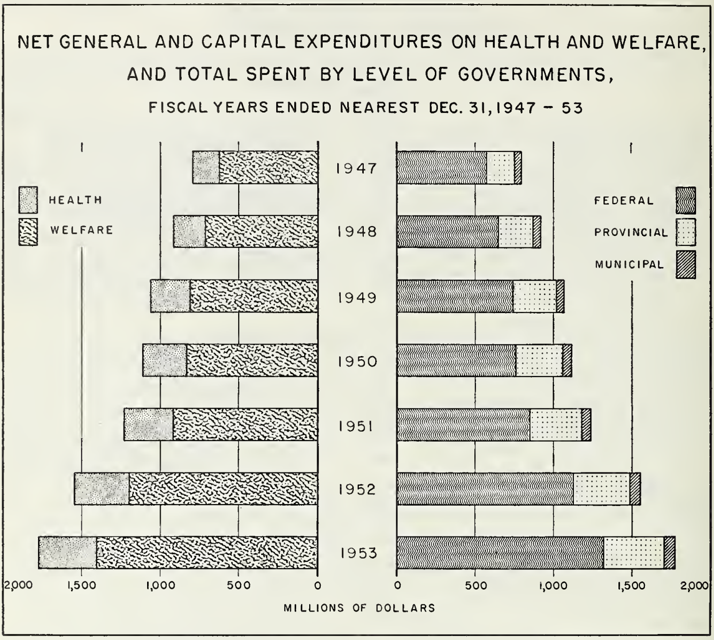
A special article on the development of public health, welfare and social security in Canada appears in the 1952-53 Year Book, pp. 224-229. That article outlines the evolution of provincial and municipal administration, the development of federal responsibility, and governmental expenditure in the fields of health, welfare and social security. A special article dealing in detail with the National Health Grant Program appears at pp. 215-223 of the 1954 edition. For net general and capital expenditures on health and welfare and total spent, by level of governments, for the years 1947-53 *see* chart on the following page.

PART I.—PUBLIC HEALTH*

The planning, supervising and financing of public health and medical care services in Canada rest mainly with the provinces though the actual administration of services is conducted, in most provinces, by municipal and other local authorities. The Federal Government provides consultative and specialist services, assists in the financing of provincial health activities through the National Health Grant Program, and also maintains services for special groups such as veterans and Indians. The functions of the Federal Government are described in Section 1, provincial and municipal health activities are reviewed in Section 2, and hospital statistics are given in Section 4.

---

* Sections 1 and 2 of this Part were prepared by the Research Division, Department of National Health and Welfare, Ottawa.



Section 1.—Federal Health Activities

Federal participation in health matters is largely centred in the Department of National Health and Welfare, with certain important programs being administered by the Department of Veterans Affairs, which provides medical and hospital care to veterans chiefly for disabilities resulting from war service; the Department of National Defence, responsible for the health of the Armed Forces; the Medical Division of the National Research Council, which administers grants for medical research; and the Dominion Bureau of Statistics, responsible for the collection and compilation of health statistics. The Department of Agriculture has certain responsibilities in connection with food production.

Under the Department of National Health and Welfare Act of 1944, the Department is responsible for the administration of certain statutes, for research in health matters, for the carrying out of international health obligations undertaken by Canada and, in co-operation with the provinces, for the preservation and improvement of public health.

Under the Quarantine Act, the Department maintains a maritime and aerial navigation quarantine service against entry of infectious diseases; it advises on the administration of sections of the Immigration Act dealing with health, and conducts, in Canada and overseas, the medical examination of applicants for immigration. It also provides care for sick mariners as required under Part V of the Canada Shipping Act, and has certain national and international responsibilities with regard to the pollution of boundary and other waters.

Under the Food and Drugs Act, the Proprietary or Patent Medicine Act and the Opium and Narcotic Drug Act, the Department is responsible for the control of the safety and purity of food and drugs; the registration, preparation and sale of proprietary or patent medicines; and control of the import, export and distribution of narcotic drugs.

The Department advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for selected recipients of these allowances; it is responsible for supervision of health conditions for persons employed on federal public works, as provided under the Public Works Health Act, and maintains a program for the conservation and promotion of the health of civil servants and other Federal Government employees. Medical advisory services are provided for the Department of Transport in all matters pertaining to the safety, health and comfort of air crew and passengers.

The National Health Grant Program.*—The National Health Grant Program, introduced in 1948, provides for the payment of federal grants to the provinces for the development of health and hospital services; at the present time 12 grants are available.

Since the inception of the program the provinces have steadily increased their utilization of the grants. The annual amounts of expenditure in each fiscal year have been as follows: 1948-49, $7,600,000; 1949-50, $15,500,000; 1950-51, $18,700,000; 1951-52, $23,900,000; 1952-53, $27,300,000; and 1953-54, $29,500,000. Between 1948 and 1953, expenditures amounted to 53·1 p.c. of the funds available; figures below show that the proportion for 1953-54 was 60·2 p.c.

---

* A special article on the first five years of the National Health Grant Program is given in the 1954 Year Book, pp. 215-223.

1.—Amounts Available to the Provinces and Amounts and Percentages Expended under the National Health Grant Program, by Grant, Year Ended Mar. 31, 1954

Grant	Amount Available[1]	Amount Expended	Percentage Expended[2]
	$	$	p.c.
Cancer control	3,598,795	2,363,488	65·7
Crippled children	519,898	449,213	86·4
General public health	7,215,000	5,081,778	70·4
Hospital construction	19,850,651[3]	9,114,164	45·9
Mental health	6,203,652	5,193,141	83·7
Professional training	516,300	699,782	135·5
Public health research	512,900	436,654	85·1
Tuberculosis control	4,239,531	4,460,766	105·2
Venereal disease control	518,099	447,339	86·3
Child and maternal health[4]	500,000	114,342	22·9
Laboratory and radiological services[4]	4,329,000	764,740	17·7
Medical rehabilitation[4]	500,000	58,522	11·7
Totals	**48,503,826**	**29,183,929**	**60·2**

[1] Authorized by P.C. 471-1953. [2] Expenditures may exceed 100 p.c. of amounts available through transfer of unexpended funds from one grant to another. [3] Grant consisted of $6,856,884 for new projects and a re-vote of $12,993,767 to complete projects approved before Apr. 1, 1953, on which construction started before Oct. 1, 1953. [4] These grants were first introduced in the fiscal year 1953-54.

Under the Program up to the end of the fiscal year 1953-54, aid for construction was approved for 49,000 beds, over 6,000 bassinets, approximately 6,400 nurses' beds and space in community health centres and combined laboratories exceeding 3,000 bed equivalents. Approximately 6,500 health workers had been trained or were undergoing special training, and more than 4,800 additional health workers had been employed with federal grant assistance. Preventive and treatment services across the country had been greatly extended, health facilities had been aided by the purchase of additional technical equipment and a significant increase in health research had been made possible.

Federal Grants to Non-governmental Organizations.—Grants are paid directly to the following non-governmental agencies engaged in health work: the Canadian Red Cross Society, the Canadian Tuberculosis Association, the Victorian Order of Nurses, the St. John Ambulance Association, the Canadian Paraplegic Association, the Canadian Mental Health Association, the Health League of Canada, the Canadian Public Health Association, the Canadian National Institute for the Blind, L'Association Canadienne-Française des Aveugles, L'Institut Nazareth de Montréal, the Montreal Association for the Blind and the Canadian Ophthalmological Society.

Federal grants are also provided under the National Health Grant Program to assist in the operation of special treatment services carried out in a number of provinces by voluntary organizations, such as the Canadian Arthritis and Rheumatism Society and various agencies engaged in the rehabilitation of crippled children.

Medical Care of Indians and Eskimos.—Health services for Indians and Eskimos are administered by the Department of National Health and Welfare. In 1953, 20 hospitals, 42 nursing stations and 61 other health centres were operated by the Department which also reimburses, on a per diem basis, the mission and other non-federal hospitals that provide accommodation for Indians and Eskimos. Full-time departmental medical officers serve the larger Indian reserves and part-time officers serve the smaller bands. In some cases, fees are paid to local physicians for services to Indians.

Consultative and Co-ordinating Services.—The principal co-ordinating agency in the health field in Canada is the Dominion Council of Health, which is composed of the Deputy Minister of National Health who serves as chairman, the chief health officer of each province and five other persons. The Council advises the Minister of National Health and Welfare on the formulation of policy. It is largely responsible for the development of a co-operative health program and for the establishment of services by the Federal Government to assist the provincial health departments. Federal-provincial committees of the Council deal with specific aspects of public health.

Certain Divisions of the Department provide technical information and advice concerning the evaluation of programs and procedures and the establishment of standards in various health fields, and conduct surveys in research and development both independently and in co-operation with other departments and agencies. These Divisions include Blindness Control, Child and Maternal Health, Occupational Health, Nutrition, Mental Health, Dental Health, Epidemiology, Hospital Design, the Laboratory of Hygiene, Information Services, and Research.

Section 2.—Provincial and Municipal Health Activities

Health services in the provinces are administered in different ways but provincial functions commonly include central planning and administration; the operation of special programs affecting the entire province in such fields as cancer, mental health, tuberculosis and laboratories; consultant service to local authorities; the administration of regulations governing local services; the provision of basic services in areas without municipal organization; and participation in the work of local health units in areas where that type of administration has been developed.

At the local level, responsibility for services varies widely, but municipalities in most provinces provide a range of basic public health services and participate in the costs of hospital care for indigents. In recent years there has been a rapid growth of health services in smaller centres and rural areas through the organization of health units with full-time staff serving counties or other combinations of local government areas. This type of organization, which concentrates on a generalized health program that includes public health nursing, sanitary inspection, communicable disease control, child, maternal and school hygiene and health education, has been introduced in most provinces; financial and administrative responsibility is shared by the provincial and local authorities involved. Despite a trend towards greater provincial participation in these local units, many remain under local administration as do the highly developed health departments found in the larger cities. Outside of fully organized health-unit areas, municipalities usually appoint part-time medical officers and other personnel while the provincial authorities assume responsibility in the areas lacking municipal organization.

Newfoundland.—Health measures in Newfoundland are centrally administered by a Department of Health. Its main functions include the operation of tuberculosis, venereal disease and other communicable disease control programs, nutrition and sanitary inspection services, and the provision of prepaid medical, hospital and nursing care throughout large areas of the Island.

The Provincial Tuberculosis Dispensary at St. John's provides free diagnostic and treatment services, and acts as a centre for tuberculosis control. The Province subsidizes additional tuberculosis control services conducted in northern areas by the International Grenfell Association and the Notre Dame Bay Memorial Hospital, and assists X-ray surveys by the Newfoundland Tuberculosis Association, which maintains a number of mobile X-ray units.

Provincially administered venereal disease facilities include one central clinic in St. John's and part-time clinics at various cottage hospitals throughout the Province. Free treatment services and drugs for venereal disease are available to all persons attending the central clinic, all cottage hospital subscribers and medical indigents.

A school health program includes educational work and such nutritional activities as the distribution of chocolate milk-powder and cod-liver oil. Public dental services for school children are made available through a provincial clinic at St. John's, and a sea-borne dental clinic in the Bonne Bay area, operated by the Junior Red Cross.

The Department of Health operates a general hospital, two tuberculosis sanatoria and a hospital for mental and nervous diseases. Hospitals operated by voluntary organizations receive per diem payments for departmental cases and, in certain outlying areas, substantial provincial grants.

The "cottage hospital" scheme operates on a voluntary prepayment basis and is designed to provide hospital service to approximately 150,000 and domiciliary medical care to about 100,000 of the population of outlying areas. Services are provided through 17 small provincially operated hospitals having a total capacity of about 430 beds; most of them are equipped with laboratory and X-ray facilities. Medical officers and nursing stations in adjoining communities supplement these services. In most cottage hospital areas, prepayment of $15 annually for the head of each family and $7·50 for single adults entitles subscribers to out-patient diagnosis and treatment, to home visits by the doctor and to hospitalization, as required. When necessary, hospitalized cases may be referred to the general hospital at St. John's or to hospitals outside the Province. Hospitalization for maternity is provided only in complicated cases. In three areas, additional premium payments are required to purchase medical services outside of hospitals. In districts not served by doctors, nursing services are provided on payment of a small annual fee. In general, the cost of medical and hospital care for indigents is borne by the Province, but beneficiaries under such programs as federal Old Age Security are usually required to pay premiums in cottage hospital areas.

Prince Edward Island.—The Health Branch of the Department of Health and Welfare includes Divisions of Public Health Nursing, Nutrition, Sanitary Engineering, Dental Health, Laboratories, Venereal Disease Control, Cancer Control, Tuberculosis Control, Mental Health and Vital Statistics.

Generalized public health nursing services are conducted by ten district nurses, and sanitary services are provided by three inspectors under the direction of a public health engineer. Free dental treatment is available for needy children at permanent clinics in Charlottetown and Summerside and for children in Grade I classes in rural areas through two mobile units. Laboratory facilities are being decentralized through the establishment in the larger hospitals of branches that remain under the supervision of the Central Laboratory at Charlottetown. A provincial venereal disease clinic is operated at Charlottetown.

Free diagnostic services for tuberculosis are made available through two stationary clinics and a mobile unit operated by the Division of Tuberculosis Control; in addition a mobile X-ray unit is provided by the Tuberculosis League. At the Provincial Sanatorium at Charlottetown, treatment services though not unqualifiedly free, are heavily subsidized by the Province; rehabilitation training and employment-placement services are provided. The Sanatorium contains a special treatment unit for poliomyelitis patients with residual paralysis; the Province pays one-half the cost of hospital care, physiotherapy and special nursing services.

Free diagnostic services for cancer are given at a clinic located at Charlottetown. Hospitalization for diagnosis is provided without charge for a period of three days for indigent cancer patients. A mental health diagnostic clinic has been opened at Charlottetown, and a speech therapy service has been established for school children with speech and hearing impairments.

Per diem grants are made to general hospitals for all patients and the Province also defrays the cost of operating the Falconwood Mental Hospital and the Provincial Infirmary.

Nova Scotia.—The principal Divisions of the Department of Public Health are Laboratories, Neuropsychiatry, Hospitals, Vital Statistics, Dental Hygiene, Nutrition, Nursing Service and Sanitary Engineering. In addition, a provincial program of generalized public health services is administered through eight local health divisions, each staffed by public health nurses and sanitary inspectors under the supervision of a full-time divisional medical health officer. The City of Halifax operates its own Health Department.

Laboratory services, including bacteriological and other examinations and milk and water analyses, have been improved and extended through the work of the Provincial Central Laboratory at Halifax and branch laboratories at Sydney and Kentville. Laboratory tests and field investigations are also conducted by the Section of Industrial Hygiene in the Division of Laboratories.

Field services for the detection of tuberculosis and venereal disease are mainly provided through eight provincially administered local health divisions. In addition, the Department maintains 12 clinics for the free treatment of venereal disease, and conducts mass tuberculosis X-ray surveys in co-operation with the Nova Scotia Tuberculosis Association. Free treatment for tuberculosis is provided in three provincial sanatoria and the municipal sanatorium at Halifax.

Community mental health services include clinics at Sydney and Digby, and an in-patient and out-patient psychiatric service at the Victoria General Hospital, Halifax. Institutional facilities for mental patients include one active treatment mental hospital operated by the Department of Public Health, a training school for mental defectives maintained by the Department of Welfare and 17 county homes administered by local government authorities.

Three provincial mobile dental clinics provide treatment for children in rural areas. A cancer clinic and a treatment clinic for poliomyelitis form part of the service at the provincially owned Victoria General Hospital. All approved general hospitals receive a provincial per diem subsidy for each patient.

Recipients of blind persons' allowances and mothers' allowances are eligible for limited medical services from the Medical Society of Nova Scotia, including physician's care in the home and office but excluding hospital attendances, surgery, and medical aids or appliances. Under the Hospital Act of Nova Scotia, persons in any of the public-assistance categories as well as other indigents are entitled to receive hospitalization as a municipal responsibility.

New Brunswick.—The Health Branch of the Department of Health and Social Services includes the following Divisions: Hospital Services and Cancer Control, Laboratories, Public Health Nursing, Communicable and Venereal Disease Control, Tuberculosis Control, Maternal and Child Health, Dental Health, Mental Health, and Sanitary Engineering.

Medical health officers and most public health nurses are employed by the Province while other local health services are provided through 16 local sub-districts, each corresponding to a county and each having a board of health composed of members appointed by municipal councils. Responsibility for the various local public health functions is divided between the Province and the boards of health. Usually, from two to four sub-districts are serviced by a district medical health officer assisted by public health nurses. Certain locally administered nursing services are subsidized by the Province.

Pathological, bacteriological, serological and chemical tests are provided by the Provincial Laboratories at Saint John and Fredericton which also supervise the distribution of vaccines, sera and bacteriologicals, including free immunizing agents, drugs for the treatment of venereal diseases and insulin for indigent diabetics. A Mobile Hygiene Laboratory conducts analyses of milk and of water during the summer months.

Free diagnostic services for tuberculosis are provided by district medical health officers in eight centres, and by a central clinic operated by the New Brunswick Tuberculosis Association at Saint John. The Health Department supervises and provides free treatment in two privately operated, one municipal and two provincially owned sanatoria. One clinic for the treatment of venereal disease is operated at Saint John.

Ten cancer diagnostic clinics provide free diagnosis and free tissue-examination service. X-ray and radium treatments are provided without charge in four of the larger hospitals to patients who come under the supervision of the cancer clinics. Acute and immediate post-paralytic cases of poliomyelitis also receive free hospital treatment and grants are made to the Junior Red Cross to provide free treatment for other crippling conditions in children.

A mental health program includes the operation of three preventive and diagnostic clinics and provides special psychiatric training for teachers on regular school staffs in the larger centres. Hospitalization for mental illness is available in the provincial hospitals at Lancaster and Campbellton.

Provincial per diem grants are paid, on behalf of all patients, to approved general hospitals.

Quebec.—The Ministry of Health maintains the following Divisions: County Health Units, Sanitary Engineering, Epidemiology, Laboratories, Demography, Psychiatric Hospitals, Public Charities, Industrial Hygiene, Nutrition, Venereal Disease, Tuberculosis, Health Education, and Medical Services to Settlers.

The Division of County Health Units supplies services through 67 county and multi-county health units covering more than 60 p.c. of the population of the Province. The maintenance and operation of these units, each with a full-time medical health officer assisted by public health nurses and sanitary inspectors, is the responsibility of the Ministry of Health, with small local financial contributions. In addition, full-time health departments operated by the larger cities serve more than one-third of the provincial population. Drugs supplied by the Provincial Department to physicians and health units include vaccines, sera, streptomycin for sanatoria patients and penicillin for venereal disease. Laboratory services, including bacteriological and other analyses, are available to physicians and health units at the Central Laboratory, Montreal.

The Province organizes tuberculosis clinics in rural areas and gives assistance to city agencies operating clinics or dispensaries for prevention, case-finding and treatment. BCG immunization against tuberculosis, administered to new-born infants in hospitals and available to children generally through the health units, is a special feature of the control program. The Department supervises tuberculosis sanatoria and mental institutions, which are operated chiefly under private and religious auspices; in these, the majority of patients receive care without charge.

The Medical Services to Settlers Division provides free nursing and physician services to residents of isolated areas. The staff consists of salaried nurses and part-time physicians paid on a fee-for-service basis. Services given include obstetrical care, examinations, vaccinations and immunizations, and emergency medical care.

No specially organized program of medical care exists for public assistance recipients in Quebec, although free care to indigents is available from a variety of dispensaries, clinics and other charitable agencies. Under the provisions of the Public Charities Act, free public hospital care is provided to persons unable to pay, with about 50 p.c. of the cost assumed by the Province, 15 p.c. by the responsible municipality and the remainder by the recognized agency providing the service.

Ontario.—The Department of Health carries on public health services through the following Divisions: Health Units, Public Health Nursing, Maternal and Child Hygiene, Dental Services, Epidemiology, Venereal Disease Control, Tuberculosis Prevention, Industrial Hygiene, Laboratories, Medical Statistics, Mental Health and Ontario Hospitals, Nursing, Public and Private Hospitals, and Sanitary Engineering.

Local public health services are available to more than one-quarter of the population through 27 health units administered locally but with consultative services and financial support supplied by the Department. Elsewhere, local services are organized through full- or part-time municipal health departments, and by the Province in unorganized territory. Provincial grants are made to local boards of health for school dental services and venereal disease clinics. Special grants are made to hospitals for the treatment of first admission poliomyelitis patients.

Public health legislation affecting water supplies, milk and food and other environmental sanitation is administered by the Department. Maternal and child health care is provided through clinics and, in addition, any expectant mother may receive one free pre-natal examination. Systematic dental examinations for children combined with instruction in dental hygiene have been initiated in four local health units and two city health departments; school dental treatment services are provided by various municipalities. In northern areas, two railway dental cars operated by the Province and three mobile units maintained by the Red Cross provide educational and treatment services in less-populated districts.

The Central Laboratory, eleven regional laboratories, six subsidized associated laboratories and one mobile unit carry out bacteriological and other examinations for clinics, hospitals and private physicians. Biologicals and other materials for the prevention and control of communicable diseases, insulin for indigent diabetics and streptomycin for tubercular patients are distributed free of charge by the Department. Chest clinics, held in more than 200 centres, are financed mainly through funds of local tuberculosis associations and the Department. The Province pays the major portion of the cost of maintaining patients in 14 sanatoria operated by voluntary groups. Cancer control services are administered by the Ontario Cancer Treatment and Research Foundation and provincial grants are given to this organization to subsidize diagnosis and treatment in eight regional centres. Care is provided for the mentally ill in 17 institutions operated by the Province, these include special units for mental defectives, epileptics, the tubercular and the criminally insane. Community mental health services such as psychiatric wards in general hospitals, travelling clinics and child guidance centres have been widely developed by general and mental hospitals, municipal health departments and other agencies. The Ontario Alcoholism Treatment and Research Foundation operates a special treatment centre for alcoholics.

A formal arrangement between the Province and the Ontario Medical Association makes limited medical services available to the recipients of all types of public assistance, including former means-test old age pensioners now receiving the universal pension, and persons receiving old age assistance, blindness allowances, mothers' allowances, and unemployment relief. New applicants for the universal old age pension may qualify under the medical plan on a means-test basis. Recipients of Ontario's disabled persons' allowances (for permanently disabled persons 18 to 65 years of age) have also been included since the inauguration of this new category program in July 1952. The medical program includes the services of a physician in his office or the patient's home, necessary consultations, home confinements, certain diagnostic services and emergency drugs. With the exception of unemployment relief cases where the costs are shared equally by the Province and the responsible municipality, the Province assumes the costs of such services which are paid on a fee-for-service basis from a special fund.

Provincial per diem grants, which vary according to hospital size, are paid to all public hospitals on the basis of public-ward bed days. Special per diem grants are also made by municipalities on behalf of hospitalized indigent residents, including public assistance recipients.

Manitoba.—The Health Branch of the Department of Health and Public Welfare includes Sections of Extension Health Services, Preventive Medical Services, Environmental Sanitation, Laboratory Services and the Division of Psychiatric Services.

Local preventive health services including health and laboratory and X-ray units are operated by the Health Extension Section which recovers part of the costs from the municipalities served. Public health services, currently covering approximately one-third of the Province's population, are provided through 13 full-time units, each comprising a variable number of municipalities; another third of the population is covered by Winnipeg's health service facilities. In three health-unit areas, prepaid diagnostic X-ray and laboratory facilities have been organized. Outside the health-unit areas, the Provincial Nursing Service provides certain public health services. Mobile clinics provide dental services for children in rural areas.

Under a system of district organization for hospital facilities, 34 hospital districts have been established; all but two contain at least one general hospital augmented in many cases by one or more medical nursing units. Municipal prepayment plans for medical care operate in a number of medical-care districts.

Provincial mental institutions are operated at Winnipeg, Selkirk and Brandon and a school for the mentally defective at Portage la Prairie. Community mental health services are also conducted, including out-patient services at mental hospitals and child guidance clinics.

Provincially operated clinics provide preventive and treatment services for venereal disease. Tuberculosis control is administered by the Sanatorium Board of Manitoba and services include diagnostic and travelling clinics, chest X-ray surveys and a rehabilitation program. The Province assists in the program by maintaining a Central Registry of Tuberculosis and a follow-up service for discharged patients carried out by public health nurses. The cost of hospitalization and treatment in sanatoria is met by provincial grants. The Manitoba Cancer Relief and Research Institute, which is subsidized by the Province, administers all cancer activities. A free cancer biopsy service is available and diagnostic services are provided to medically indigent rural residents. Radium and X-ray treatments are available without charge to rural residents and at a nominal charge to residents of Greater Winnipeg.

Laboratory services are provided through provincial laboratories at Winnipeg and Brandon. In addition, the Department distributes, to doctors, hospitals and government agencies, penicillin and other drugs for the treatment of venereal disease, insulin and other biologicals for indigents and antibiotics for tubercular patients.

The Provincial Government contributes a grant of one dollar per diem to hospitals and sanatoria for all public-ward patients and lump-sum grants to teaching hospitals.

Public assistance recipients in Manitoba are eligible for limited medical, dental and optical care, on a means-test basis, with the major share of the cost of services assumed by the responsible municipality. Hospital care is provided on a similar basis, municipalities making a per diem payment for persons with local residence, in addition to the provincial per diem grants. The Province assumes the cost of medical and hospital care provided to some indigents who are unable to establish local residence.

Saskatchewan.—The Saskatchewan Department of Public Health has five main Branches: Regional and Preventive Health Services, Medical and Hospital Services, Psychiatric Services, Research and Statistics, and Administrative Services. The Health Services Planning Commission functions as an advisory and planning agency on major policy and administrative matters in the Department.

The Regional and Preventive Health Services Branch includes Divisions of Communicable Disease Control, Child Health, Venereal Disease Control, Nursing Services, Dental Health, Nutrition and Sanitation. These Divisions organize province-wide programs and provide consultative services to local health personnel. The Communicable Disease Control Division distributes free vaccines and sera, and supervises immunization programs. Four clinics for diagnosis and treatment are maintained by the Venereal Disease Control Division. Field services for venereal disease, tuberculosis, mental health and other public health programs are supplied by the Nursing Services Division. Public health laboratory services and the free distribution of certain drugs and biologicals are carried out by the Provincial Laboratories.

The Regional Health Services Branch is also responsible for the organization of health regions which are administered by locally elected health boards although staff is appointed and financial assistance is provided by the Province. Eight of the proposed regions are currently in operation. In addition to the general public health services provided in all regions, the Swift Current Health Region has a prepaid medical-care plan including general practitioner, specialist and diagnostic care for all residents, and limited dental services for children. The plan is financed by personal and property taxes with some Provincial Government contributions. Dental health programs for children have been launched in two other regions.

The Medical and Hospital Services Branch is responsible for the operation of the Saskatchewan Hospital Services Plan, administers the program of medical services to public assistance recipients, supervises the operations of the municipal doctor programs and the Air Ambulance Service, and administers a rehabilitation program for crippled children and poliomyelitis patients through the Physical

Restoration Division. In addition to free hospital care, complete medical as well as dental and optical services, including some auxiliary services, are provided to the recipients (including spouses) of the universal old age pension who were formerly in receipt of the old age means-test pension or who can qualify for the provincial supplementary allowance. Persons and their dependants receiving blindness or mothers' allowances, social aid cases and provincial wards are also eligible. Drugs are provided subject to deterrent charges paid by patients of 20 p.c. of the cost. The Provincial Government meets the expenses under the medical program and, for most of these cases, the hospital insurance tax as well. Provincial subsidies of 25 cents per capita per annum and equalization grants are paid to about 100 municipalities with municipal doctor contracts.

The Psychiatric Services Branch supervises psychiatric hospitals and administers community psychiatric services including clinics. Free care and treatment is given for all mentally ill and mentally defective persons requiring hospitalization. The tuberculosis control program, operated by the Saskatchewan Anti-tuberculosis League, includes preventive and treatment services, the latter financed by provincial per diem grants and municipal levies. The Saskatchewan Cancer Commission co-ordinates all cancer-control measures and operates publicly financed consultative, diagnostic and treatment clinics at Saskatoon and Regina.

Under the Saskatchewan Hospital Services Plan, which is a universal compulsory hospital-insurance scheme, most residents are eligible for in-patient public-ward care by the annual prepayment of a personal tax of $15 by all persons 18 years of age or over or self-supporting, and of $5 for each dependant under 18 years of age, with a maximum family tax of $40. Additional funds are provided by the Province, as needed, from general revenue, including, since April 1950, one-third of the proceeds of a 3-p.c. sales tax.

Alberta.—The Department of Public Health includes Divisions of Communicable Diseases and Health Units, Public Health Education, Hospital and Medical Service, Municipal Hospitals, Laboratory, Public Health Nursing, Social Hygiene, Sanitary Engineering, Cancer Services, Mental Health, Tuberculosis Control, Health Entomology, Nutrition Services and Vital Statistics.

For the provision of local health services, the Province is divided into health-unit districts. The units are administered, with Departmental supervision and financial aid, by local boards of health composed of members appointed by local governments. Fourteen units are directed by full-time medical health officers and two units by public health nurses. Outside the health-unit areas, the Department operates a district nursing service in outlying communities and is generally responsible for health services in unorganized territory. The larger cities have their own full-time health departments.

Free services regularly provided through Departmental clinics include diagnosis and treatment for venereal disease, medical examination for cancer, mental guidance and psychiatric examinations, X-ray examinations and tests for tuberculosis at stationary and travelling clinics, and mobile X-ray units. Provincial laboratory services at Edmonton and Calgary are available to all doctors and approved hospitals, and sera and biologicals are distributed for preventive work.

On the recommendation of provincial cancer clinics, surgical, X-ray and radium treatment, and hospitalization up to a limit of seven days for diagnostic purposes are provided by the Department. There are four provincial institutions for the mentally ill and one for mental defectives. Sanatoria care and treatment are provided without charge for all resident tubercular patients and out-patient pneumothorax services are also available. The Department bears the cost of hospital and medical care for rheumatoid arthritic patients under 25 years of age and provides all residents suffering from poliomyelitis with medical, surgical and hospital care and rehabilitation services. Provision has been made to extend treatment services to cerebral palsy patients. All maternity patients satisfying resident requirements may be hospitalized for a 12-day period at provincial expense, and a provincial grant is authorized to assist those who receive maternity services at home.

By agreement with the Alberta College of Physicians and Surgeons and the Dental Association, medical, optical and some dental services are provided to all persons (and dependants) on the universal old age pension who were formerly in receipt of the means-test pension or who can qualify for the provincial supplementary allowance, as well as recipients of old age assistance or blindness or mothers' allowances. The Province assumes the cost involved and also reimburses the municipalities for 60 p.c. of their expenditure on any medical care provided to local indigents. An agreement exists with the Associated Hospitals of Alberta under which public assistance recipients receive standard public-ward care and necessary drugs, for which the Province pays reduced per diem rates.

A municipal hospital program provides standard hospitalization for nearly all the population of the Province. The plan is operated at the local level, under provincial supervision, with costs distributed among the patient, the municipality and the Provincial Government. The patient is charged $2 per day and the municipality meets the remainder of agreed charges for public-ward care and extra services. The Provincial Government then reimburses the municipality for one-half of this amount.

British Columbia.—The Health Branch of the Department of Health and Welfare consists of three bureaux, two located at Victoria and one at Vancouver. The Bureau of Local Health Services at Victoria includes Divisions of Health Units, Public Health Nursing, Public Health Engineering, Environmental Management, and Preventive Dentistry. The Central Administration Bureau, also at Victoria, includes Vital Statistics and Public Health Education. The Divisions of Tuberculosis Control, Venereal Disease Control and Laboratories form the Bureau of Special Preventive and Treatment Services, located at Vancouver.

The provision of local public health services is on a health-unit basis. These units are administered and staffed by the Province but are jointly financed by the Province and the local municipalities concerned. Sixteen units, covering 50 p.c. of the population, are in operation. In isolated areas, Public Health Nursing Districts, staffed by public health nurses and sanitary inspectors, are forerunners of fully organized health units. The cities of Vancouver and Victoria have their own health departments.

Special provincial public health services include tuberculosis clinics which provide free diagnostic and consultative service, venereal disease clinics which offer free diagnosis and treatment, and maternal and child health clinics operated by public health nurses which provide immunization and pre-natal and post-natal advice. Branch laboratories are maintained in various parts of the Province through which immunizing agents are distributed free of charge to doctors, health officers and public health nurses. Children's preventive dental programs, provincially subsidized, have been organized in four local health units. In addition, child dental clinics with local dentists participating are established in 43 communities, the costs being met equally by the community and the Province. In connection with mental health services, the Province operates stationary and travelling child-guidance clinics. A clinic of psychological medicine at the provincial hospital at Essondale functions as an investigatory and active treatment centre for short-term patients.

Provisions for the treatment and control of cancer, which include a treatment centre and a nursing home at Vancouver, consultative clinics located throughout the Province and a free province-wide biopsy service, are the responsibility of the British Columbia Cancer Foundation, an official agent of the Provincial Government. The Province pays the operating costs of the Foundation and helps finance voluntary programs concerned with the physical rehabilitation of paraplegics and cerebral palsied children, the care and treatment of arthritics, and the maintenance of blood-transfusion services.

Institutions for the care of tubercular and mental patients and infirmaries for persons with incapacitating disabilities are operated by the Province. Indigents are hospitalized in these institutions at public expense while other patients pay if financially able. Rehabilitation services are available to tubercular and mental patients.

Full medical, dental and optical care, prescribed drugs and some auxiliary services are provided to all persons (and their dependants) receiving the universal old age pension who were formerly on the means-test old age pension or who can qualify for the provincial supplementary allowance, and to recipients (including dependants) of old age assistance, blindness or mothers' allowances, local relief and to certain child wards. The Provincial Government assumes the costs of hospitalization for all such persons. Where they hold municipal residence, the Province assumes 80 p.c. of the cost of the medical program, the remainder being shared by all municipalities on a population basis.

Public-ward hospital services are available to all provincial residents through a public hospital-care program administered by the Hospital Insurance Service. Before 1954, the plan was financed mainly by flat-rate premiums, but costs now are met from general revenues and part of the provincial sales tax. Payment of $1 for each day of hospitalization, with no maximum, is required of patients.

Section 3.—Health Statistics

Compared with the well established and highly standardized vital and institutional statistics, other national health statistics are still in an early developmental stage in Canada as well as in most other countries. Only in recent years, with recognition of the increase in life span and the impact of the aging of the population, has it become generally understood that mortality and communicable disease statistics can no longer serve as the sole yardstick by which to measure a nation's health. Though many infectious diseases have been effectively controlled, other diseases, particularly those characteristic of an older population, cause much illness and disability, requiring a large volume of health services, without becoming immediately fatal and thus without being adequately reflected in mortality statistics.

A good deal of valuable statistical material exists in some provinces regarding certain aspects of their health services. Nationally, the only source available so far on general illness, health services, and personal expenditure for health care is the Canadian Sickness Survey 1950-51. Statistics on causes of death are shown in the Chapter on Vital Statistics, pp. 204-5, and statistics of hospitals, mental and tuberculosis institutions are dealt with in Section 4 of this Chapter. Other health statistics collected nationally, deal with notifiable diseases, illness among some 100,000 federal Civil Servants, and home nursing services. Following are some details on the Canadian Sickness Survey and notifiable disease reporting.

Canadian Sickness Survey 1950-51.—The Canadian Sickness Survey, carried out during a twelve-month period commencing in the autumn of 1950, sought to give estimates of the incidence and prevalence of illness and accidents of all kinds, the amount of medical, nursing and other health care received, and the volume of family expenditures for the various types of health services. It was the first nation-wide study of prevalence of illness in the general population of Canada.

Begun by the Department of National Health and Welfare the survey was carried out by the 10 provincial health departments with funds from the federal National Health Program.

The survey was planned and organized jointly by the Dominion Bureau of Statistics and the Department of National Health and Welfare in consultation with the provinces whose health departments gave full co-operation.

The survey method consisted of personal visits, by specially trained enumerators, to a sample of approximately 10,000 households distributed throughout each of the 10 provinces in metropolitan, small urban and rural areas. Less than 5 p.c. of these households refused to participate in the survey. Of the remaining households over 80 p.c. of the individuals involved remained in the sample throughout the survey period. All information, including particulars of income, housing and environment, was obtained by direct interview of a household informant, usually the housewife. Though the starting dates for the survey varied somewhat in different provinces, a total of 14 monthly visits was made to most of the households in the sample. On the first visit the enumerator introduced the survey and left a special calendar designed to help the informant keep a detailed day-to-day record of current sickness and expenditures for each member of the household. During each of the succeeding twelve months, the enumerator interviewed the informant and recorded the sickness experienced by each person since the previous visit. The final visit was made to review the information recorded throughout the whole survey period. Uniformity of practice in the 10 provinces was maintained by frequent consultation among the agencies involved, by uniform instructions to the enumerators and by the use of three standard record forms—a Household Record, an Individual Sickness Record and an Expenditures Form. Auxiliary schedules, also standardized, were used to record permanent physical disabilities and also health services which were desired but not obtained.

The sample was designed to obtain estimates within a sampling error of 20 p.c. for events occurring at least once among every 50 persons in the population during the year. Indications are that for a large proportion of the estimates the error will be substantially smaller. Area sampling was used for the survey. As a first stage six domains (regions) of study were established consisting of four single provinces and two groups of three provinces each. Within each domain of study three types of area were considered—metropolitan, urban and rural. Within these areas multi-stage sampling was adopted. In metropolitan centres, all of which were included in the sample, and in some of the sampled urban areas, the first stage of sampling was the block; the second stage, the household. In other urban areas systematic sampling from a list of households was used. Rural areas were divided into primary sampling units and grouped into strata. Within each stratum one primary sampling unit was selected and multi-stage sampling applied. The first stage was the selection of clusters or segments within the primary sampling unit and the second stage was the selection of households within the chosen clusters.

In designing the sample extensive use was made of population, social and economic data obtained from 1941 Census material. Similarly, the results of the 1951 Census, which was taken at about the mid-point of the survey period, provided the necessary distributions concerning persons and families for the calculation of national and provincial figures. The basic survey units for data on illness were the individual persons; the units for expenditures on health services included families, as defined in the Census, together with certain single persons whether living alone or with other families as roomers or relatives.

Data on certain aspects of the survey are still being processed. The following is a brief abstract from the available preliminary information regarding the three main features of the survey: volume of sickness, volume of medical care received, and family expenditures for health care and services.

Estimated Volume of Sickness during the Survey Year.—The survey distinguishes three broad groups of severity, not in a clinical sense of seriousness but in its effect on the patient's capacity to go about his usual activity. These groups are: (1) confined to bed (bedfastness), (2) inability (disability) to continue usual activity (*e.g.*, work, going to school, homemaking, etc.), and (3) any complaint, whether severe or only very minor such as headache. It must be kept in mind that the information was obtained from lay informants mostly by lay enumerators. Following are the average days of sickness per person as estimated from the survey data:

ESTIMATED AVERAGE DAYS OF SICKNESS PER PERSON DURING SURVEY YEAR

Group	*Both Sexes*	*Male*	*Female*
		No. of Days	
Confined to bed (home or hospital)	5·6	5·0	6·2
Disability	11·9	12·1	11·7
Any complaint	51·4	44·6	58·4

ESTIMATED AVERAGE DAYS OF SICKNESS PER PERSON, BY AGE

Age	*In Bed*	*Disability*	*Any Complaint*
		No. of Days	
Under 15 years	5·3	10·4	34·9
15–24 years	3·8	8·4	32·1
25–44 "	4·8	9·3	53·6
45–64 "	6·2	15·3	70·9
65 years or over	12·0	26·8	101·9
ALL AGES	5·6	11·9	51·4

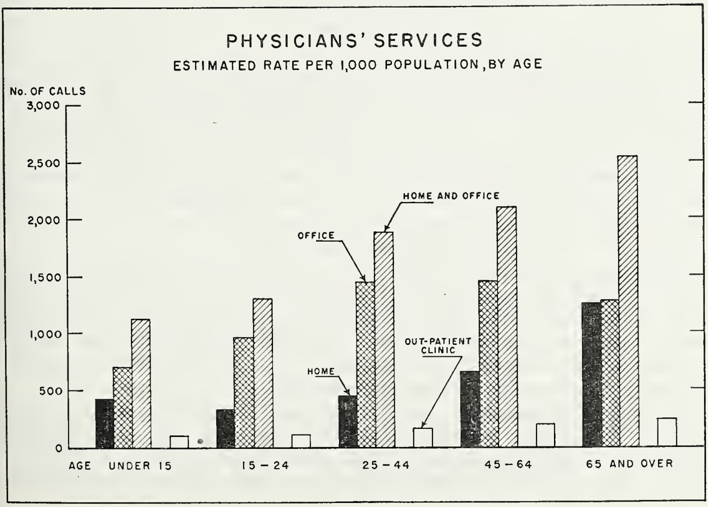
Volume of Physicians' and Dentists' Services.—The survey did not cover physicians' visits at the hospital and, therefore, these visits are not included in the following statements. The statement on dentists' visits shows only the number of visits and does not reflect the type of service performed.

ESTIMATED RATE PER 1,000 POPULATION OF PHYSICIANS' SERVICES

Type	*Both Sexes*	*Male*	*Female*
Office and home calls	1,650	1,320	1,990
Office calls	1,130	910	1,360
Home calls	520	410	630
Out-patient hospital clinic visits	150	160	140

ESTIMATED RATE PER 1,000 POPULATION OF PHYSICIANS' SERVICES, BY AGE

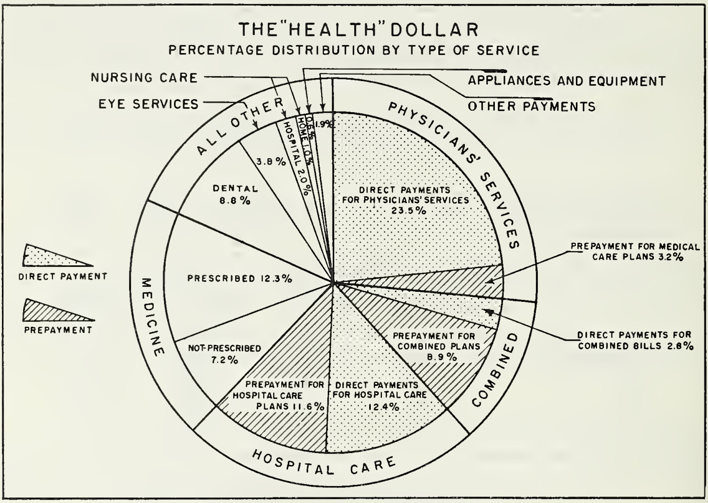
Age	*Home and Office Calls*	*Office Calls*	*Home Calls*	*Out-patient Clinic Visits*
Under 15 years	1,120	700	420	100
15–24 years	1,300	970	330	110
25–44 "	1,880	1,440	440	170
45–64 "	2,100	1,450	650	200
65 years or over	2,530	1,280	1,250	240
ALL AGES	1,650	1,130	520	150



ESTIMATED RATE PER 1,000 POPULATION OF DENTISTS' VISITS

Both sexes	320
Male	260
Female	380

Health Care Expenditures.—The chart below shows the estimated classification of the family dollar expended for health care by the type of service. The percentage figures refer only to actual payments made by family members during the survey year, and do not include payments made from public funds or contributions from third parties such as employers' contributions to prepayment plans.



THE "HEALTH" DOLLAR
PERCENTAGE DISTRIBUTION BY TYPE OF SERVICE

Notifiable Disease Statistics.—Morbidity reporting procedures for notifiable diseases are carried out at three levels: local, provincial and federal. The primary legislative and regulatory power in the field of communicable disease control, as in most other health matters, rests with the provinces. Cases of notifiable diseases are reported to the local Medical Health Officer, who in turn reports to the provincial department of health. The provincial department transmits to the Dominion Bureau of Statistics a weekly summary report showing total cases for the province as a whole and for each city of 10,000 population or over.

The Dominion Council of Health, which consists of the Deputy Minister of National Health, the Deputy Ministers of Health of each of the provinces, and certain lay appointees, provides an opportunity for an exchange of information on reportable disease practices followed in the various provinces, as well as for reaching common understanding or agreement on co-ordinated or uniform requirements or procedures, where such is deemed desirable.

The federal Department of National Health and Welfare is keenly interested in matters of communicable disease control. Through its various consultative services and through the National Health Grants Program, practical, as well as financial, assistance is available to the provinces for developing services and control programs, and for carrying out special morbidity or epidemiological investigations. For example, the Division of Epidemiology receives weekly telegraphic reports from the provinces on cases of poliomyelitis during epidemic periods and is prepared to render practical assistance in establishing control measures or in co-operating in the investigation of unusual epidemiological features. The National Health Grants Program includes specific grants for venereal disease and tuberculosis control, the latter being apportioned to provinces on a formula based on 50 p.c. for population and 50 p.c. for the average number of deaths from tuberculosis in the previous five-year period. A variety of other communicable disease control programs or research studies are assisted under the General Public Health Grant and the Public Health Research Grant. In considering the justification and approval of such projects, the Department relies to a great extent on information regarding incidence acquired through the notifiable diseases reporting system.

The Dominion Bureau of Statistics compiles and publishes weekly and annual reports on the incidence of notifiable diseases. It also supplies the provinces with weekly report forms and Notification of Venereal Infection forms. The weekly summary published by the DBS shows data for the current week, previous week (adjusted for reporting of delayed cases and change of diagnosis), five-year median, cumulative number of cases from the beginning of the calendar year, and the weekly number of cases for certain diseases reported in the United States. Generally speaking, the figures refer to new cases reported at the place where first diagnosed. The printed reports are released on Thursday of each week, 11 days after the end of the report week (Saturday). This amount of time is necessary to allow for the transmission and compilation of the reports from the local level to the provincial and federal departments. These weekly summaries are issued to provincial departments of health and other health agencies in Canada and abroad.

The postal regulations permit the free transmission through the mails of notifiable disease reports, collected by provincial departments, which are also intended, by agreement under Section 9 of the Statistics Act, for the use of the Dominion Bureau of Statistics. This means that all reports of a statistical nature can be forwarded by the Post Office Department from the field through provincial departments to the DBS free of postage. A free supply of report forms to the physicians and their free transmission through the mail are important steps toward removing obstacles to complete reporting.

Monthly epidemiological reports, showing reported cases and deaths, were sent to the League of Nations, Geneva, from 1924 to 1940. Current weekly reports and corrected annual figures are supplied to the World Health Organization, Geneva, and the Pan American Sanitary Bureau, Washington, D.C.

Through the courtesy of the United States Public Health Service an exchange of data on notifiable diseases was instituted in January 1942 between the United States and Canada. This service consists of the exchange of the Weekly Communicable Disease Summary and the Weekly Morbidity and Mortality Report of the National Office of Vital Statistics, Department of Health, Education and Welfare, Washington, D.C., for similar reports of the Dominion Bureau of Statistics.

The limitations of data on notifiable diseases are well known to those in the field and are being taken into consideration: they are mainly, incompleteness of reporting, particularly in regard to certain diseases, and variations of reporting practices and procedures. Nevertheless, the figures have always been valuable as indicating the trend of occurrence of these diseases.

2.—Reported Cases of Selected Notifiable Diseases and Rates per 100,000 Population, 1926-53

Year	Diphtheria	Poliomyelitis (All Types)	Smallpox	Tuberculosis (All Types)	Typhoid and Paratyphoid Fever
			Numbers of Cases		
Av. 1926-30	8,301	661	2,189	5,743	3,270
Av. 1931-35	3,294	637	273	8,287	2,410
Av. 1936-40	2,777	1,202	90	9,322	1,760
Av. 1941-45	2,917	800	9	12,926	1,195
1946	2,535	2,527	2	15,263	921
1947	1,550	2,291	—	13,739	697
1948	898	1,168	—	12,363	565
1949	806	2,458	—	13,097	761
1950	421	911	—	12,429	718
1951	253	2,568	—	11,152	559
1952	190	4,755	—	10,506	509
1953	132	8,878	—	10,572	457
			Rates per 100,000 Population[1]		
Av. 1926-30	84·5	6·7	22·3	58·5	33·3
Av. 1931-35	31·1	6·5	2·6	78·1	22·7
Av. 1936-40	24·9	10·8	0·8	83·7	15·8

[1] Reporting not compulsory in Newfoundland and New Brunswick. [2] Reporting not compulsory in Newfoundland. [3] Reporting not compulsory in Newfoundland and Alberta. [4] Reporting not compulsory in New Brunswick and Manitoba. [5] Includes cases of septic sore throat. [6] Includes 3 cases where type was not specified. [7] Includes 40 cases where type was not specified. [8] Type not specified. [9] Reporting not compulsory in Prince Edward Island and New Brunswick. [10] Other venereal diseases include chancroid, granuloma inguinale and lymphogranuloma venereum. [11] Based on official estimates of population (*see* p. 137).

Section 4.—Hospital Statistics*

This Section presents a brief outline of hospital conditions in Canada.† For statistical purposes, hospitals are divided into three general classifications: hospitals, tuberculosis institutions and mental institutions. It is because mental illness and tuberculosis are major public health problems that statistics for hospitals treating these conditions are prepared independently of those for other hospitals. Hospitals, excluding mental and tuberculosis institutions, are classified on the basis of admission policy into public, private or federal. Public hospitals are further classified as "general" and "special" hospitals. Thus, statistics are collected for five groups of hospitals: public, private, federal, mental and tuberculosis.

The total number of hospitals reporting, classified by ownership and province, is shown in Table **4**. Table **5** classifies reporting public hospitals by type of service. Table **6** gives the capacity of hospitals reporting and Table **7** presents summary statistics of reporting public and private hospitals for a period of five years.

---

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics.

† More detailed information may be found in DBS publications: *Annual Report of Hospitals, 1952*, Vols. I and II; *Mental Institutions, 1952; Tuberculosis Institutions, 1952.*

[1] Includes newborn.

[2] 54 public hospitals reporting other information did not report finances.

Subsection 2.—Statistics of Mental Institutions

Data on movement of patients and personnel number for the 75 mental institutions that reported to the Dominion Bureau of Statistics in 1952 are given in Table **10**. Table **11** presents revenue and expenditure for 65 of those institutions; financial statistics were not reported by three municipal hospitals in Nova Scotia, two provincial hospitals in Quebec, one federal and one private hospital in each of Ontario and Quebec, and one psychiatric hospital in Saskatchewan.

Government and municipal payments made up 84·8 p.c. of all the revenue received by mental institutions and salaries accounted for 56·1 p.c. of the total maintenance expenditure. New buildings and improvements took 12·0 p.c. of the expenditure in 1952. Prince Edward Island, with only one institution reporting, was the only province showing no expenditure for this item. Ontario's outlay amounting to $5,070,039, accounted for 20·8 p.c. of all its 1952 expenditure for this purpose.

[1] Excludes one Veterans Affairs hospital and nine Indian Health Services hospitals primarily or solely operated for the treatment of tuberculosis.

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY*

Responsibility for social welfare in Canada has rested in large part on the provinces which, in turn, have delegated an important share of this responsibility to the municipalities. While constitutional authority has not changed, except with respect to unemployment insurance and old age pensions, the financial participation of the Federal Government has been greatly extended in the past two decades in the provision of income maintenance payments.

The creation of the Department of National Health and Welfare in 1944 established for the first time in the Federal Government a department in which public welfare is a major responsibility. The Department is charged with the administration of federal Acts relating to welfare which are not assigned by law to other departments. In addition to the general promotion of social welfare, the Welfare Branch of the Department administers the family allowances program, the old age security program and the federal aspects of old age assistance, allowances for blind persons and the new program of aid to disabled persons. Grants to the provinces to promote physical fitness were introduced in 1943, but the Act providing for them was repealed in June 1954.

---

* Except as otherwise indicated, this Part was prepared in the Research Division, Department of National Health and Welfare, Ottawa.

Unemployment insurance is administered by the Unemployment Insurance Commission; welfare and health services for veterans by the Department of Veterans Affairs; and the welfare of Indians and Eskimos by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively.

Administration and financial responsibility in other fields of welfare, such as mothers' allowances, child protection and general assistance or relief, are left entirely to the provinces and their local subdivisions.

Section 1.—Federal Government Programs

Subsection 1.—Family Allowances

The Family Allowances Act was introduced in 1944 as a basic social security measure designed to assist in providing equal opportunity for all Canadian children. The allowances involve no means test and are paid entirely out of the Federal Consolidated Revenue Fund. They are not part of taxable income, although persons with children eligible for family allowances obtain a smaller income tax exemption for such children than for children not so eligible.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada or has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Monthly payment is made normally to the mother although any person who substantially maintains the child may be paid the allowance on his behalf. The allowances are paid at the monthly rate of $5 for each child under 6 years; $6 for each child from 6 to 9 years; $7 for each child from 10 to 12 years; and $8 for each child from 13 to 15 years. The allowances are paid by cheque, except for Eskimo children and a group of Indian children for whom payment is made largely in kind because of lack of exchange facilities in remote areas and the need for education in the use of nutritive foods.

If it is satisfactorily shown to the authorities that the allowances are not being spent for the purpose outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who, although she is under 16 years of age, is married.

Family allowances are administered by the National Director of Family Allowances of the Department of National Health and Welfare through Regional Directors in offices located in each provincial capital. A Welfare Section in each regional office deals with welfare questions arising out of the administration of allowances. A Supervisor of Welfare Services advises each Regional Director and reports through him to the Chief Supervisor of Welfare Services, who acts in a similar advisory capacity to the National Director. The actual preparing and issuing of the cheques is the responsibility of the treasury division of each regional office which reports to the Chief Treasury Officer of the Department of Finance with the Department of National Health and Welfare.

The Regional Director for the Yukon and Northwest Territories, located at Ottawa, is responsible for payments to families in those areas. Close co-operation is maintained with the Departments of Citizenship and Immigration and of Northern Affairs and National Resources which are responsible for the welfare of Indians and Eskimos, respectively (*see* Population Chapter, pp. 159 and 160).

[1] Based on gross payments for March.

Subsection 2.—Old Age Security*

Under the Old Age Security Act (R.S.C. 1952, c. 200), effective January 1952, a universal pension of $40 a month is payable by the Federal Government to all persons aged 70 or over, subject only to a residence qualification. Residence requirement is 20 years immediately preceding commencement of pension with certain temporary absences allowed. Where the applicant has not so resided for the complete 20 years, the periods of absence may be made up by having been present in Canada, prior to the 20-year period, for double the periods of absence; for these persons, there is a further requirement of one year's residence immediately preceding the commencement of the pension.

Payment of the pension is suspended when the pensioner leaves Canada. On his return, the pension may be resumed and, in the case of absences not exceeding six months, payment may then be made retroactively for as many as three months of absence in any calendar year.

The program is financed on a pay-as-you-go basis. Payment of the pension is made from the Consolidated Revenue Fund and charged to the Old Age Security Fund account. The income of the Old Age Security Fund is derived from three sources. First, there is a 2-p.c. tax on personal taxable income, that is, on income less exemptions and deductions; the maximum tax per person is $60 per annum. The fund also receives the amount collected by a special 2-p.c. tax on corporate taxable income and the proceeds of a 2-p.c. sales tax. Temporary loans may be made to the Old Age Security Fund, subject to repayment as directed. Operations of the Fund for the first three years are shown in Table **2**.

---

* The Old Age Pensions Act of 1927, under which old age pensions were paid jointly by the Federal and Provincial Governments, ceased to be effective Dec. 31, 1951, at which time all recipients thereunder were automatically transferred to the rolls of the universal pension under the Old Age Security Act, 1951. A description of the provisions of the Old Age Pensions Act of 1927 will be found in the 1951 Year Book, pp. 234-236, and statistics of operation for the years ended Mar. 31, 1950 and 1951, and the nine months ended Dec. 31, 1951, are given in the 1952-53 Year Book, pp. 264-265.

[1] Program in effect for the last three months only of the fiscal year. [2] In the Budget Speech of Apr. 6, 1954, it was announced that this sum was being written off against the reserve for possible losses on active assets.

The program is administered by the National Director of Old Age Security of the Department of National Health and Welfare through the ten regional offices established in connection with the payment of family allowances. The two programs are administered largely by the same personnel.

Persons in receipt of old age assistance who reach age 70 are transferred to the universal pension rolls without further action on their part. Other persons make application to the Regional Director located at their provincial capital. The Regional Director for the Yukon and Northwest Territories is located at Ottawa.

In Alberta, British Columbia and Saskatchewan, the provincial governments make supplementary payments to recipients of old age security who qualify under a means and residence test. In Alberta and British Columbia the allowance cannot exceed $15 per month; in Saskatchewan, it is a flat $2.50 per month. In some provinces and in the Yukon, recipients of the pension who are in special need may also receive relief.

[1] Program in effect for last three months only of the fiscal year.

Subsection 3.—Government Annuities*

Under the Government Annuities Act (R.S.C. 1952, c. 132) passed in 1908, the Federal Government carries on a service to assist Canadians to make provision for old age. The Act is administered by the Minister of Labour.

---

* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is $10 and the maximum $1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may now be arranged to reduce by $40 per month at age 70, to fit in with payments under the Old Age Security Act.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest to the purchaser or his legal representative. Provision is made in the Act for group annuity contracts, whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts are taxable as to the interest portion of the annuity payment and the return-of-capital portion is exempt; annuities arising from approved pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1954, the total number of annuity contracts and certificates issued, excluding replacements, was 368,690. On the latter date, 64,405 annuities were being paid amounting to $30,281,536 annually, and 261,277 deferred annuities were being purchased. The total amount of purchase money received up to Mar. 31, 1954, was $837,667,308.

Up to Mar. 31, 1954, 949 corporations, institutions and associations, as compared with 940 up to Mar. 31, 1953, had entered into agreements with the Government to purchase annuities. Under these agreements, 147,523 employees or members were holding certificates for purchase of deferred annuities as compared with 137,537 one year earlier. The number of certificates issued under groups in the year 1953-54 was 13,161 as compared with 13,634 in the previous year.

4.—Government Annuities Contracted and Purchase Money Received, Years Ended Mar. 31, 1935-54

Subsection 4.—Other Federal Government Programs

Unemployment Insurance and National Employment Service.—In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed, establishing a national system of unemployment insurance which is outlined in Chapter XVIII.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. It is administered through local employment and claims offices and supervised by the Department of Labour. Statistics of positions offered and placements made are given in Chapter XVIII.

Prairie Farm Assistance.—The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter IX.

Welfare Services for Indians and Eskimos.—The welfare of Indians and Eskimos is administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively; this field is covered in the Population Chapter, pp. 159 and 160.

Section 2.—Federal-Provincial Programs

Subsection 1.—Old Age Assistance

The Old Age Assistance Act (R.S.C. 1952, c. 199), effective January 1952, provides for federal financial aid to the provinces for assistance, not exceeding $40 a month, to persons aged 65 or over subject to a residence qualification of at least 20 years. The payment of old age security commencing at age 70, makes old age assistance effective from ages 65 to 69. Within the limits of the federal Act each province is free to fix the amount of the maximum assistance payable, the maximum income allowed and other conditions of eligibility. The Federal Government's contribution per recipient cannot exceed 50 p.c. of $40 per month or of the assistance paid, whichever is less.

For an unmarried person the total income allowed, including assistance, cannot exceed $720 a year; for a married couple, $1,200 a year; where the spouse is blind within the meaning of the Blind Persons Act, the total income of the couple cannot exceed $1,320 a year. The exact pension payable in each case depends on the amount of outside income and the resources of the applicant and his spouse. To be eligible for assistance the applicant must not be in receipt of an allowance under the Blind Persons Act or the War Veterans Allowance Act. The applicant must have resided in Canada for at least 20 years immediately preceding the commencement of the assistance, but may have certain temporary absences; where the applicant has not so resided for the 20 years he must have been physically present in Canada, prior to the 20 years, for a total period equal to twice the total of the absences during the 20 years.

Implementation of the program in any province is contingent upon the province passing enabling legislation and signing an agreement with the Federal Government. The program became effective in January 1952 in all areas except Newfoundland, Yukon Territory and the Northwest Territories where the effective date was Apr. 1, 1952. The maximum assistance is $40 per month in all provinces and territories, except in Newfoundland where it is $30 per month.

Administrative responsibility for the program is vested in the province; the provincial plan for such administration must be approved by, and cannot be changed except with the consent of, the Governor in Council. Assistance is paid by the province with federal reimbursement made through the Department of National Health and Welfare. The Old Age Assistance Division of that Department administers the federal aspects of the program.

In Alberta, British Columbia and the Yukon Territory, the provincial or territorial governments make supplementary payments to recipients of old age assistance who qualify under a means and residence test. In Alberta and British Columbia the allowance cannot exceed $15 per month, while in the Yukon it cannot exceed $10 per month. In some provinces, recipients of old age assistance who are in special need may also receive relief.

[1] Program in effect only for the last three months of the fiscal year. [2] Estimated population as at June 1 of each year for the Provinces and 1951 Census data for the Territories. [3] Program became effective on Apr. 1, 1952. [4] Exclusive of Newfoundland and the Yukon and Northwest Territories.

Subsection 2.—Allowances for the Blind

The Blind Persons Act (R.S.C. 1952, c. 17), effective January 1952, provides for financial aid to the provinces toward the provision of allowances not exceeding $40 a month to blind persons aged 21 or over, subject to a residence qualification of at least 10 years. Within the limits of the federal Act, each province is free to fix the amount of the maximum allowance payable and the maximum income allowed. The Federal Government's contribution per recipient cannot exceed 75 p.c. of $40 per month or of the allowance paid, whichever is less.

For an unmarried person, the total income allowed, including the allowance, cannot exceed $840 a year; for an unmarried person with one or more dependent children, $1,040; for a married couple, $1,320 a year; where the spouse is also blind within the meaning of the Blind Persons Act, the total income of the couple cannot exceed $1,440 a year. The exact allowance payable in each case depends on the amount of outside income and the resources of the applicant and his spouse. To be eligible for an allowance the applicant must not be in receipt of assistance under the Old Age Assistance Act, of an allowance under the War Veterans Allowance Act, of a pension under the Old Age Security Act or of a pension in respect of blindness under the Pensions Act. The applicant must have resided in Canada for at least 10 years immediately preceding the commencement of the allowance but may have certain temporary absences; where the applicant has not so resided for the 10 years, he must have been physically present in Canada, prior to the 10 years, for a total period equal to twice the total of the absences during the 10 years.

Implementation of the program in any province is contingent upon the province passing enabling legislation and signing an agreement with the Federal Government. The program became effective in January 1952 in all provinces and in the Yukon and Northwest Territories.

Administrative responsibility for the program is vested in the province; the provincial plan for such administration must be approved by, and cannot be changed except with the consent of, the Governor in Council. The allowances are paid by the province with federal reimbursement made through the Department of National Health and Welfare. The Old Age Assistance Division of that Department administers the federal aspects of the program.

In Alberta, British Columbia, Saskatchewan and the Yukon Territory, the provincial or territorial governments make supplementary payments to recipients of allowances for the blind who qualify under a means and residence test. In Alberta and British Columbia the allowance cannot exceed $15 per month; in Saskatchewan it is a flat $2.50 per month; in the Yukon it cannot exceed $10 per month. In some provinces recipients of the allowance who are in special need may also receive relief.

---

[1] Program in effect for the last three months only of the fiscal year. [2] Estimated population as at June 1 of each year for the Provinces and 1951 Census data for the Territories.

A description of the pensions payable to blind persons under the Old Age Pensions Act 1927, repealed in 1951, will be found in the 1951 Year Book, pp. 234-235. The final statistics of operations under that program are given in the 1952-53 Year Book, p. 267.

Subsection 3.—Allowances for Disabled Persons

In June 1954, Parliament passed the Disabled Persons' Act under which the Federal Government will provide financial aid to the provinces for allowances, not exceeding $40 a month, to totally and permanently disabled persons aged 18 or over, subject to a residence qualification of at least 10 years. It is anticipated that the Act will become effective in January 1955. Within the limits of the Federal Act each province is free to fix the maximum amount of assistance payable, the maximum income allowed and other conditions of eligibility. The Federal Government's contribution per recipient cannot exceed 50 p.c. of $40 per month or of the assistance paid, whichever is less.

The allowance is not available to a person in receipt of an allowance under the Blind Persons Act, assistance under the Old Age Assistance Act, an allowance under the War Veterans Allowances Act, a pension under the Old Age Security Act, or to any person who is receiving money or assistance by way of mothers' allowances.

Further conditions of eligibility require that an applicant may not be a patient in a tuberculosis sanatorium, a mental institution, a home for the aged, an infirmary or an institution for the care of incurables. Except as prescribed in the regulations, the applicant may not be a patient or resident in a hospital, a nursing home or in a private, charitable or public institution. For an unmarried person, total income including the allowance may not exceed $720 a year and for a married couple, $1,200 a year; where the spouse is blind within the meaning of the Blind Persons Act, the total income of the couple may not exceed $1,320 a year.

Except for certain temporary absences, an applicant must have resided in Canada for at least 10 years immediately preceding the commencement of the allowance; an applicant who does not have 10 years' residence must have been in Canada prior to the 10 years for a total period equal to twice his absences during the 10 years. The provincial authority must suspend the payment of the allowance when, in its opinion, the recipient unreasonably neglects or refuses to comply with or to avail himself of training, rehabilitation or treatment measures or facilities provided by or available in the province.

Implementation of the program in any province is contingent upon the province passing enabling legislation and signing an agreement with the Federal Government. Nine of the ten provinces had indicated by June 1954 their intention of participating in the program.

Subsection 4.—National Physical Fitness Program

A fitness and recreational program was introduced by the National Physical Fitness Act in October 1943. The Act, which established a National Council to promote the well-being of the people of Canada through fitness and recreational activities, was administered by the Department of National Health and Welfare. Under this Act, the Federal Government made available to the provinces an amount not exceeding $232,000 annually on a per capita basis for the promotion of fitness and recreation programs. Financial assistance was given only to those provinces that signed specific agreements with the Federal Government and to the extent to which they matched it dollar for dollar up to the maximum available. During 1953-54, seven provinces—Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—and the Northwest Territories participated in the program. The amounts made available to the individual provinces are given in the 1954 Canada Year Book, p. 253. National Fitness Scholarships were awarded annually to provide financial assistance to professionally qualified Canadians with three years' successful experience who desired to improve their professional qualifications.

The Physical Fitness Act was repealed in June 1954 but commitments in respect to agreements already made with the provinces were provided for under the repealing Act. The Physical Fitness Division, through which the Act was administered, continues to function within the Department of National Health and Welfare.

The Division provides consultative services on all aspects of fitness and recreation at the request of federal and provincial departments and national organizations. It acts as a clearing house for the latest information on fitness, recreation, community centres, physical education, athletics, sports and games, theatre arts and related activities. It operates a preview library service for visual aids. In addition, it maintains liaison with national associations and comparable organizations in other countries. To an increasing extent during the past few years, the Division has given direct assistance to provincial authorities by the provision of professional consultant services regarding organization and specialized instruction for leadership training courses at the regional and provincial level. These services augment those provided by provincial fitness and recreation offices, particularly in those specialized fields where the province is unable to provide services of its own.

Subsection 5.—Training Programs

Under the Vocational Training Co-ordination Act of 1942 (R.S.C. 1952, c. 286), the Federal Department of Labour, in co-operation with the provincial governments, carries on various training projects. Details of these schemes will be found in Chapter XVIII, Section 6.

Section 3.—Provincial Programs

Subsection 1.—Mothers' Allowances

All provinces have statutory provision for allowances to enable certain needy mothers to remain at home to care for their dependent children. The total cost of this assistance is paid from provincial funds, except in Alberta where a portion of each allowance is charged to the municipality of residence.

Subject to the conditions of eligibility, which vary from province to province, the allowances are payable to applicants who are widowed or whose husbands are mentally incapacitated and, except in Alberta, to those whose husbands are physically disabled and unable to support their families. They are also payable, except in Nova Scotia, to deserted wives who meet specified conditions; in several provinces to mothers who have been granted a divorce or legal separation and in some to unmarried mothers. Adoptive mothers and foster mothers are also eligible under certain circumstances. The age limit for children is 16 years except in Manitoba where it is 15 years and in Newfoundland where it is 17 years. Provision is made in most provinces to extend payment for a specified period if the child is attending school and six provinces continue to pay allowances on behalf of physically and mentally handicapped children for from two to five years.

In all provinces applicants must satisfy conditions of need and residence but both the amount of outside income and resources allowed and the length of residence required prior to application vary considerably, the latter, for example, from one year in Saskatchewan, Ontario and Newfoundland to five years in Quebec. All provinces require that the applicant be resident at the time of application and that the child or children live with the recipient, and most provinces require that they continue to live in the province while in receipt of an allowance. Nationality is a condition of eligibility in six provinces. The applicant must be a British subject, the wife or widow of a British subject or her child must be a British subject, except in Quebec and New Brunswick, where Canadian citizenship is required.

In each province the relevant Act is administered by public welfare authorities. Most provinces have a mothers' allowances board or commission which makes the final decision regarding eligibility and the amount of allowance granted or acts in an advisory capacity. In some provinces local advisory committees are also appointed. Rates of benefit as of June 1954 are given in the following paragraph.

In *Newfoundland*, the maximum allowance for a mother and one child is $25 a month, with $5 for each additional child and for a disabled father at home; the maximum for a family is $65 a month, with supplementary assistance of up to $20 monthly if necessary for proper care and maintenance. In *Prince Edward Island* a mother with one child may receive up to $25 a month, with up to $5 for each additional child; the family maximum is $50 monthly. In *Nova Scotia* a monthly maximum of $80 for a family is fixed by statute; the amount payable to a mother and one child is determined by family need. An amendment to the Act, to become effective January 1955, provides that an allowance not exceeding $40 per month may be paid on behalf of a disabled child 16 years or older who is not yet eligible for an allowance under the federal-provincial Disabled Persons Act. In *New Brunswick* the family maximum is $80 a month, with $35 for a mother and one child and $7.50 for each additional child. An additional $10 may be granted for rent if it is needed and if the allowance is below the family maximum. The maximum allowance in *Quebec* for a mother and one child is $35 in a district where the population is under 5,000 and $40 where it is 5,000 or over. An additional $1 per month is paid for each of the second, third, fourth and fifth children, $2 for the sixth and seventh, and $3 for the eighth and subsequent children. An extra $5 is allowed when the mother is unable to work or when a disabled father is living at home. *Ontario* pays a maximum of $50 a month for a mother and one child, with $10 for each additional child and for a disabled father at home. A foster mother with one child may receive up to $24 per month, with two children up to $48, and $10 for each additional child. The allowance may be increased up to $20 a month where need is shown and a winter fuel allowance, not exceeding $24 monthly, is also granted. The maximum monthly allowance in *Manitoba* for a mother and one child is $51. There is an additional $10 paid for a child aged one to six years, $13 for a child seven to 11 years, and $15.50 for a child 12 to 14 years; $17.25 is paid for a disabled father in the home. The family maximum is $167 plus winter fuel for seven months, with supplementary assistance of up to $25 monthly in special circumstances. In *Saskatchewan* the maximum allowance for a family is $85 a month, with $35 being paid for a mother and one child, $10 for a second child, $5 for each subsequent child and $10 for a disabled father at home. A foster parent with one child may receive up to $25 a month, with an additional $10 for a second child and $5 for each additional child. Supplementary assistance under the social aid program may be granted by the local municipality and the costs are shared equally by the province and the municipality. The allowance in *Alberta* may not exceed $50 per month for a mother with one child or $60 if her other income does not exceed $120 a year, $20 for the second child, $15 for the third and $10 for each subsequent child. A maximum of $145 is set for a family with nine or more children. Supplementary aid in the form of public assistance may be granted, where necessary, by the municipality of residence, with the Province reimbursing 60 p.c. of the cost. In *British Columbia* the maximum monthly mothers' allowance set by statute is $42.50 for a mother with one dependent child, and $7.50 for each additional child and for a disabled father living at home. Supplementation from social allowance funds brings the actual maximum monthly payments to $69.50 per month for a mother and one child and $14 for each additional child and for a disabled father living at home. Extra expenditure may be met through social allowance funds, and a nutrition allowance is available for tubercular patients and their families.

9.—Mothers' Allowances, by Province, as at Mar. 31, 1952-54[1]

Subsection 2.—Provincial Welfare Services

The care and protection of neglected and dependent children, care of the aged, social assistance or relief, and other special services outlined in the following summary are governed by provincial legislation, although in many areas responsibility for services rests with municipal or voluntary organizations. Though the programs and the methods of financing vary considerably, most provinces share the costs of some or all of the municipal services in organized areas and assume the total cost in unorganized territories. The medical services available to social assistance recipients are described at pp. 229-242. Mothers' allowances are dealt with in the immediately preceding subsection, old age assistance at pp. 264-265, and allowances for the blind at pp. 266-267.

Newfoundland.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional welfare centres.

Child Care and Protection.—Child welfare has developed largely as a public service and is administered by the Child Welfare Division. Neglected children, made wards of the Director, are placed in foster or adoptive homes or in institutions. The Department pays for the maintenance of wards, grants subsidies for children admitted to orphanages administered by religious organizations, and contributes towards the cost of educating blind and deaf-mute children in institutions at Halifax, N.S., and Montreal, Que. The Division operates an Infants' Home providing short-term care.

In 1953, a Division of Corrections was established to deal with both juvenile delinquents and adult offenders and, for the present, to administer correctional institutions for boys and girls. The Corrections Act, 1953, provides for the establishment of a Youth Guidance Authority, an Adult Guidance Authority and classification centres.

Care of the Aged.—The Province maintains a Home for the Aged and Infirm at St. John's and also pays a per diem rate for needy old people in the Salvation Army Home and in approved boarding homes.

Social Assistance.—Under the Dependents' Allowances Act, the Province grants assistance to needy unemployables not eligible for other forms of statutory assistance. Aid for certain needy able-bodied persons is provided under the Health and Public Welfare Act.

Prince Edward Island.—The Department of Health and Welfare is responsible for the administration of provincial welfare services.

Child Care and Protection.—Under the Children's Protection Act, neglected or delinquent children may be placed under the guardianship of the Director of Child Welfare or an approved child welfare agency. The children are placed in foster or adoptive homes, boarding homes or children's institutions under the inspection of the Director. Provincial grants are made to child welfare agencies and to the two private orphanages, one Protestant and one Roman Catholic. Juvenile Courts are under the Attorney General's Department, and juvenile delinquents are cared for at the expense of the Department of Health and Welfare in correctional institutions of the neighbouring provinces.

Care of the Aged.—The aged and infirm are cared for in Falconwood Mental Hospital and in two provincial infirmaries.

Social Assistance.—The Department provides direct social assistance in rural areas and, by agreement, assumes 50 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages. The Department also operates a province-wide program of financial aid to families where the breadwinner is suffering from tuberculosis and is unable to support the family.

Nova Scotia.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional offices.

Child Care and Protection.—The Child and Family Welfare Branch administers the child-protection legislation including the inspection of institutions and the licensing of foster and maternity homes. Neglected children may be made wards of the Director of Child Welfare or of approved Children's Aid Societies. Each Society receives annually a provincial grant of up to $2,000; a sum equal to 50 p.c. of funds received through private campaigns or from municipalities for general operating expenses; and an additional grant of not less than $1,000, the maximum determined on a per capita basis. The Province and municipality of residence contribute towards the maintenance of each ward placed in a foster home or institution, unless a court order for support is made against the parents.

The Branch operates the Nova Scotia Training School for mentally defective children and the Nova Scotia School for Boys for juvenile delinquents. It is also responsible for the operation of the six Juvenile Courts and the supervision of their probation staffs. The municipality of residence is responsible for the maintenance of children in reformatories although the Province may contribute also if the reformatory complies with specified standards.

Care of the Aged.—The aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes where the municipality of residence may contribute to the cost of maintenance. Homes for the aged are subject to provincial inspection but they do not receive direct assistance from the Province.

Social Assistance.—Relief to unemployables is a local responsibility.

New Brunswick.—The Department of Health and Social Services administers provincial welfare legislation.

Child Care and Protection.—Under the Children's Protection Act, administered by the Minister of Health and Social Services, responsibility for protection and placement services is largely delegated to Children's Aid Societies throughout the Province. Guardianship of a neglected child may be vested in a Society, the Director of Child Welfare or in the Court. Orphanages are operated by religious, private or, in some cases, municipal organizations. With a few exceptions, boarding homes must be licensed and are subject to the provincial inspection required for all child-caring institutions. The Province and the municipality of residence each contributes towards the maintenance of wards committed to an institution, and the Province also reimburses municipalities for one-half of the cost of maintaining wards placed in foster homes, up to a prescribed maximum. The Department may place blind or deaf-mute children in special schools at Halifax, N.S., and Montreal, Que. Juvenile Courts are under the Attorney-General's Department and delinquent boys may be placed in the Provincial Industrial School for Boys which reports to the Minister of Health and Social Services.

Care of the Aged.—Homes for the aged are operated under municipal, religious, fraternal or private auspices and are subject to provincial inspection but they receive no direct financial support from the Province.

Social Assistance.—Relief to unemployables is a local responsibility.

Quebec.—Major responsibility for the administration of provincial welfare measures is shared by the Department of Health and the Department of Social Welfare and Youth. The former administers the Quebec Public Charities Act which embodies the Government's policy of granting subsidies to religious and private institutions where they exist rather than creating public services. Grants are made to these institutions on a per diem basis, with the Province, the municipality of residence and the institution sharing the cost of maintenance of indigent persons admitted for care. The Department of Social Welfare and Youth is responsible for preventive and rehabilitative work among neglected and dependent children and for grants to recreation and welfare agencies, in addition to certain important educational functions. Social Welfare Courts are, however, under the jurisdiction of the Department of the Attorney-General.

Child Care and Protection.—Needy or abandoned children are generally cared for in institutions such as orphanages, nurseries and other homes, assisted under the Quebec Public Charities Act, although there is an increasing use of foster homes by child welfare agencies. However, children who are found by a Social Welfare Court or other court to be particularly exposed to moral or physical dangers may be admitted to recognized youth protection schools under the Youth Protection Schools Act, 1950, administered by the Department of Social Welfare and Youth. Municipalities of residence are required by law to contribute 50 p.c. of the operating and maintenance costs of these schools but, in practice, the Province pays approximately 87 p.c. of all expenses and the entire cost of new construction. The Social Welfare Courts, which in 1950 replaced Juvenile Courts, have statutory responsibility in connection with child and youth protection and certain other provincial programs and also serve as Family Courts.

Children who have been exposed to tuberculosis but who have not been infected are placed with rural families under the supervision of the Department of Health in co-operation with child-welfare agencies.

Care of the Aged.—Institutional care for indigent old people is provided under the Quebec Public Charities Act through private institutions. Under the same Act, family welfare agencies administer home allowances to needy old people who do not require institutional care.

Social Assistance.—Financial aid is not provided to needy families in Quebec but institutional care for indigents is available under the Quebec Public Charities Act. The Department of Colonization operates a program whereby families in need are settled on the land in newly opened districts and granted financial aid until they become self-supporting. In these areas, a disability pension scheme is linked to a program of free medical services.

Ontario.—Provincial welfare services are administered by the Department of Public Welfare. The Province is divided into 17 welfare districts with a supervisor in charge of each district.

Child Care and Protection.—Three major child welfare Acts were amended and consolidated in a single new Child Welfare Act in 1954. The Act is administered by the Child Welfare Branch which supervises the local Children's Aid Societies to which responsibility for the care and protection of neglected and dependent children is delegated. Annual provincial grants to these Societies include token grants based upon the quality and level of services provided in addition to grants equal to 25 p.c. of the amounts raised through voluntary effort. In addition the Province reimburses the municipalities of residence in amounts not exceeding 25 p.c. of the net cost of maintaining children made wards of Children's Aid Societies. The Province also reimburses a municipality to the same extent where it has made payments under an agreement with a Children's Aid Society for the temporary care and shelter of non-wards. Children's institutions are governed by provisions of the Charitable Institutions Act and day nurseries by the Day Nurseries Act. The Province makes per diem grants for children in charitable institutions and pays one-half of the operating and maintenance costs of municipal day nurseries. Juvenile Courts are under the Attorney-General's Department, while training schools for juvenile offenders are operated by the Department of Reform Institutions.

Care of the Aged.—Municipalities are required by law to provide institutional care for the aged, with the Province contributing 50 p.c. of the net operating and maintenance costs and 50 p.c. of the costs of approved new construction or approved additions and extensions. Both public and private institutions are subject to provincial regulations and inspection and, under certain circumstances, charitable institutions may receive a small per diem grant for each person maintained. Grants are made available to limited-dividend housing corporations to assist in the construction and equipment of low-rental housing projects for elderly persons.

Social Assistance.—Under the Unemployment Relief Act, the Province reimburses municipalities, up to a prescribed maximum, for 50 p.c. of their expenditures on relief to needy unemployables and on incapacitation allowances and rehabilitative measures for single, needy, handicapped residents. In unorganized areas the program is administered and financed by the Department. The Soldiers' Aid Commission extends emergency assistance and advice to former service men and their families. Under the Disabled Persons' Allowances Act, assistance of up to $40 per month is granted to permanently and totally disabled persons.

Manitoba.—The Public Welfare Division of the Department of Health and Public Welfare is responsible generally for provincial welfare services.

Child Care and Protection.—The Director of Public Welfare administers the child welfare legislation. Included in this administration is the supervision of Children's Aid Societies and of child-caring institutions. The Provincial Public Welfare Division carries on these services directly through a decentralized program of district offices in a large area of the Province. In the remainder of the Province, the Director supervises the four non-denominational Children's Aid Societies in their respective territories. Neglected children may be made wards of the Director of Public Welfare or of a Children's Aid Society. Municipalities are responsible for the maintenance of wards but the Province reimburses them for a portion of these costs from the $500,000 annual fund distributed among the municipalities in proportion to their relief and child welfare expenditures. Under agreements between the Province and the Children's Aid Societies, payment of annual provincial grants is conditional on the provision of a basic level of service and the collection of equivalent voluntary contributions; payments are made in accordance with a formula based on the number and cost of social workers per 100,000 population in a representative area where the Division directly administers child welfare services.

The Division provides foster-home care and supervision for mental defectives placed in the custody of the Director of Public Welfare and, with the Division of Psychiatry, operates a home for mentally defective girls. The Attorney-General's Department is responsible for Juvenile Courts and operates a boys' home and a girls' home for delinquents.

Care of the Aged.—Institutions and nursing homes for the aged and infirm are supervised and licensed by the Department under public health legislation.

Social Assistance.—Municipalities are responsible for assistance to needy residents, but these expenses, as well as ward maintenance costs, are partly reimbursed by the Province from the $500,000 annual social assistance fund which is allocated on a *pro rata* basis. In addition, whenever the costs of social assistance and ward maintenance to any municipality exceed in a year a sum equivalent to four mills of the equalized assessment of such municipality, the Province reimburses 60 p.c. of the excess. The Province is responsible for aid to persons without municipal residence as well as for general assistance in unorganized territory.

Saskatchewan.—Provincial welfare services are administered by the Department of Social Welfare and Rehabilitation.

Child Care and Protection.—The Department provides welfare services for children throughout the Province, with the exception of Saskatoon where certain responsibilities are delegated to the Children's Aid Society. Children found to be neglected are, by court order, made wards of the Minister and are placed in foster homes, adoptive homes or institutions. A portion of the maintenance costs of wards, except of children born out of wedlock, is paid by the municipality of residence. The Branch operates two institutions for the temporary care of wards. It also operates a program of non-ward care and a program for unmarried mothers.

The Corrections Branch of the Department is responsible for both adult and juvenile correctional services, supervises probation and parole services for juvenile delinquents and administers the Saskatchewan Boys' School and the provincial gaols. The Juvenile Court is presided over by a judge who devotes his time exclusively to cases of juvenile delinquency. Juveniles are discharged from correctional institutions only by parole. A Youth Guidance Authority supervises the discharging of juveniles from probation, from institutions and from parole.

Care of the Aged.—The Department operates three homes for the aged, and licenses and supervises all privately operated homes. Maintenance, where necessary, may be arranged under the social-aid program. The Nursing Homes and Housing Branch is responsible for planning to meet future needs of the aged and for co-operating with other governmental organizations in the fields of institutional care and housing for the aged.

Social Assistance and Special Services.—The costs of assistance to needy persons are shared equally by the municipalities and the Department, but the Province pays the entire cost for transients and for persons in unorganized areas. The Rehabilitation Branch provides training and placement services for the handicapped; one-half the cost of this training is borne by the Province and one-half by the municipality of residence. It is also responsible for the rehabilitation of minority groups and operates a farm where the Métis—persons of mixed Indian and white stock who do not qualify under the Indian Act—are instructed in modern methods of farming while being paid for their work. Three schools are conducted for Métis children.

The Department administers the Provincial Housing Act which empowers the Province to enter into public housing projects under Sect. 35 of the National Housing Act, and to stimulate construction of low-rental housing projects by limited-dividend housing corporations.

Alberta.—The Department of Public Welfare is responsible for the administration of provincial welfare measures. It has branches at the four larger centres, and inspectors are located in suitable areas throughout the Province.

Child Care and Protection.—The care of children who are made wards of the Government under court orders or by agreement is under the control of the Child Welfare Commission. These children may be placed in foster homes or in licensed boarding homes or institutions. Permanent wards may also be placed in adoptive homes. The cost of maintenance of wards is paid by the Province which recovers 40 p.c. of such cost from the municipality of residence. The Home Investigating Committee is responsible for the inspection and the licensing, where required, of all homes and institutions in which children are given care. The Attorney-General's Department administers legislation regarding juvenile delinquency.

Care of the Aged.—The Province reimburses municipalities for 50 p.c. of cost incurred for the maintenance of needy, aged or infirm persons in municipally licensed homes. These homes must meet a specified standard before a licence is given and they are inspected periodically by officials of the Department of Public Welfare.

Social Assistance.—Municipalities are responsible for assistance to indigent residents but the Province is authorized to make grants to the municipalities of up to 60 p.c. of the value of the assistance. The Province pays the total cost of assistance granted to transients and to residents of unorganized districts, subject to a refund of 40 p.c. from the districts, through the Department of Municipal Affairs. Families may be assisted through settlement on suitable farm lands. The Single Men's Division maintains two hostels and one welfare centre to care for unemployable, single, homeless men without municipal domicile. Single ex-service men are cared for at Calgary and Edmonton without being placed in institutions. The Province has also established nine Métis colonies where settlers have extensive fishing, hunting and trapping rights, and are encouraged to engage in lumbering, agriculture and stock-raising. Educational services are provided and government-operated stores sell goods at cost price.

Widows and Disabled Persons Pensions.—Under the Widows Pension Act, widows aged 60 to 64 years, inclusive, may receive pensions of up to $40 per month. Wives of husbands committed to hospital under the Mental Diseases Act and wives who have been deserted without reasonable cause for a specified period are also eligible if within the age group. To be eligible, applicants must meet certain conditions of need and residence and must not be in receipt of a mothers' or blind persons' allowance.

The Disabled Persons Pension Act provides for the payment of pensions of up to $40 per month to persons suffering from a chronic disability and unable to accept gainful employment.

British Columbia.—The administration of provincial welfare services by the Social Welfare Branch of the Department of Health and Welfare is decentralized through district and municipal offices in six regions covering the whole Province. Generalized field service is provided by provincial social workers. The staff of the Social Welfare Branch is also responsible for welfare services required in connection with a number of programs operated by the Health Branch.

Cities and municipalities of over 10,000 population must have their own social welfare departments to administer the social assistance program and to provide case-work services. The Province pays 50 p.c. of the salaries of municipal social workers or, where more than one is needed, matches the municipal appointees worker for worker. Smaller municipalities may have their own or amalgamated social welfare departments or they may pay for the services of the Social Welfare Branch.

Child Care and Protection.—The Child Welfare Division administers legislation governing the protection of children, including adoptions, and provides direct services except at Vancouver and Victoria where it supervises the Children's Aid Societies. Municipalities are responsible for the costs of maintaining wards, but the Province reimburses them to the extent of 80 p.c. of such expenditure and pays the entire cost for children in unorganized areas. The Province pays the total maintenance cost of wards who are children of unmarried mothers. Child-caring institutions, boarding homes and day nurseries are licensed and supervised. The Social Welfare Branch administers an industrial school for delinquent boys and one for delinquent girls. Family case-work and rehabilitative supervision of children released from the schools are carried on in co-operation with the Psychiatric Division and the probation service of the Juvenile Courts, which are under the jurisdiction of the Attorney-General's Department.

Care of the Aged.—The Social Welfare Branch operates the Provincial Home which provides care for aged men. In addition, the Province operates Provincial Homes for the Aged under the mental health program administered by the Provincial Secretary's Department, as well as the Provincial Infirmary for chronic care under the B.C. Hospital Insurance Service. The Province also contributes 33 p.c. of the capital cost of construction of municipal nursing homes, and licenses and supervises municipal and private nursing homes and boarding homes. The maintenance of needy residents, where necessary, is shared with the municipalities on an 80-20 basis. The Province assumes the total cost for provincial charges.

Social Assistance.—The social assistance program is administered by the Director of Welfare and supervised by the Family Division. It includes allowances to indigent individuals or families, counselling services, occupational training and the maintenance costs of nursing-home or boarding-home care. The Province reimburses the municipalities 80 p.c. of the cost of basic and certain supplementary social assistance payments to indigent municipal residents and assumes the total cost of assistance granted for those without municipal residence.

Subsection 3.—Workmen's Compensation

In all ten provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment or by a specified industrial disease. A summary of provincial workmen's compensation legislation is given in Chapter XVIII.

Subsection 4.—Care of Dependent and Handicapped Persons

Statistics of charitable and benevolent institutions are compiled every five years. The Census of 1951 covered the 1950 activities of 533 institutions, 490 being residential institutions and 43 being day nurseries. Summary statistics are given in the 1954 Year Book, pp. 263-264.

PART III.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning and education. These agencies, some of which are described below, supplement the services of the federal and provincial authorities in many fields and play a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them.

Canadian Welfare Council.—The Council, established in 1920, is a national association of organizations and individual citizens in partnership to secure comprehensive, well-administered social services of high quality for the Canadian people. It furnishes authoritative information, technical advice and field service in the main areas of social welfare and provides a means of co-operative planning and action by serving as a link between the public and private agencies. Member organizations include community chests and councils, private social agencies, various federal, provincial and municipal departments and other groups and individuals active in the fields of health, welfare and education.

The policies and programs of the Council are determined by its members with the help of a nationally representative elected board of governors. Aided by professional staff, the members work together through Divisions of Child and Family Welfare, Recreation, Public Welfare, Delinquency and Crime, and Community Chests and Councils. Other aspects of social welfare are dealt with by special committees and departments, including the Department of French-speaking Services.

Some subjects to which the Council is giving study are: labour, Canadian adoption laws as a step towards improved adoption procedure in all provinces, needs of the aged, public assistance, residence and settlement legislation, rehabilitation of the disabled, health insurance and civil defence. A large number of surveys on a variety of subjects have been requested by agencies, communities and provinces. Council publications include the periodicals *Canadian Welfare* and *Bien-être social canadien,* an annual directory of Canadian welfare services, and division bulletins, pamphlets and reports.

Canadian Conference of National Voluntary Health and Welfare Organizations.—The Conference, set up in 1949, provides national health and welfare agencies with a clearing-house and a medium for exchange of experience and for joint study and action with a view to increasing co-operation in matters of common concern.

Canadian National Institute for the Blind.—The Institute, founded in 1918, provides extensive rehabilitative services for blind persons and carries on an active program for the prevention of blindness. Its services include home teaching of touch reading and writing, handicrafts, occupational training and placement, welfare services and financial assistance. It operates factories to afford employment for blind men and women and controls tobacco stands, news stands and industrial cafeterias managed by the sightless. Field services are provided through over 30 district offices staffed by field workers and teachers, most of whom are blind. The Institute maintains a national library of Braille and recorded literature, operates several residences and gives financial support to recreational clubs for blind persons. In the preventive field, it operates eye clinics, arranges treatments and distributes literature. The Institute is supported by government grants and voluntary subscriptions.

The Canadian Red Cross Society.—The peacetime program of the Society consists of eight major services. The operation of outpost hospitals and of a blood-transfusion service are important projects in nearly all provincial divisions. Nutrition and visiting homemaker's services, and instruction in swimming and water safety are carried on in most branch areas. In addition, relief is supplied in times of national and international disaster, craft training and recreational centres are operated for hospitalized war veterans, and a national inquiry bureau traces persons for the purpose of reuniting families and friends.

The Canadian Junior Red Cross promotes health and good citizenship in schoolroom branches across Canada. As part of its program, the Junior Red Cross Crippled Children's Fund is maintained to assist in providing treatment for handicapped children.

The Victorian Order of Nurses for Canada.—The Victorian Order of Nurses is a voluntary public health agency, national in scope and having as its primary object the care of the sick in their own homes. Care is given, under medical direction, by visiting nurses to medical, surgical and maternity patients, a large percentage of whom would otherwise be without skilled nursing services. Patients are expected to pay the cost of the home visits, but fees are scaled according to family income and service is never refused because of inability to pay.

Part-time nursing service is given in industrial plants where the number of employees does not warrant full-time employment of a nurse. In smaller centres where the Order provides the only public health nurse, the program is usually enlarged to include school nursing, assistance at immunization clinics and child health centres, and other public health services.

The Health League of Canada.—The Health League of Canada is a voluntary association devoted to health education. Through the media of press, radio, posters, pamphlets, motion pictures and the public platform, the League keeps the public informed concerning the health value of milk pasteurization, immunization procedures for preventable diseases, proper nutritional habits, sanitary work practices by public food-handlers and organized health programs for industrial workers. The League supplements its year-round program with the annual sponsoring of a National Health and a National Immunization Week.

The Order of St. John.—The primary purpose of the Order is to teach first aid and home nursing to citizens of Canada irrespective of age, race and creed, and to provide trained and organized personnel to help in time of emergency. The Canadian branch was organized in 1895 and, since that time, more than 1,250,000 persons have been trained and have passed examinations in various subjects. The Order has its headquarters and national offices at Ottawa, branches in every province and local centres in hundreds of cities, towns and villages throughout Canada. There are two subsidiary branches, the St. John Ambulance Association and the St. John Ambulance Brigade, the first devoted to teaching and the second to rendering voluntary public assistance as required. The Order has been selected as the official organization to train civil defence workers in basic and advanced first aid.

The Canadian Arthritis and Rheumatism Society.—The Canadian Arthritis and Rheumatism Society was incorporated in 1948 for the purpose of reducing morbidity and mortality from arthritic and rheumatic diseases. Its objectives include the raising of funds to support research, the education of professional personnel and of the general public, and the promotion and organization of treatment facilities. A Medical Advisory Board composed of leading physicians, surgeons and scientists advises on the research program, professional education and public relations.

Divisions of the Society are organized in nearly every province. Arthritis clinics sponsored by the Society have been established in 30 hospital out-patient departments and, in addition, 44 mobile physiotherapy units provide treatment and consultations to those unable to leave home.

The Canadian Mental Health Association.—The Canadian Mental Health Association operated between the years 1918 and 1950 as the National Committee for Mental Hygiene. The Association carries on a continuous educational campaign for the general public on various aspects of mental health and, in co-operation with the University of Toronto, conducts a mental health liaison course for selected teachers from all provinces. Provincial branches seek to promote a better understanding of the problems of mental illness and the need for community participation in mental health services. The program of the Association also includes fact-finding surveys of current mental health services and research studies of specific aspects of mental illness and social behaviour.

Other National Health Organizations.—Additional voluntary agencies are engaged in a variety of health activities including financial support and operation of educational programs, research and training, and the provision of treatment. These activities may be directed towards the general public or towards specific categories of ill or disabled persons, such as the paraplegics. Some organizations, such as those dealing with the blind and the deaf, are interested in the welfare as well as the health problems of the groups served. Organizations of professional medical and related personnel, in particular of public health personnel, assist in the development of agencies and in guiding their activities.

PART IV.—VETERANS HEALTH AND WELFARE SERVICES*

Section 1.—The Department of Veterans Affairs

The great majority of veterans have now been assimilated into civilian life and the work of the Department of Veterans Affairs has settled into a well-defined pattern, its major functions being concerned with medical treatments and allowances, payment of pensions, welfare work, rehabilitation of the disabled and land settlement. The Department maintains 18 district offices and two sub-district offices in Canada as well as a district office at London, England. The administration of the Veterans' Land Act is conducted through eight district offices and 35 regional offices. Travelling settlement officers operate from the regional offices and serve the veterans settled throughout Canada.

The basis of administration of the Department of Veterans Affairs, established in 1944, is dealt with in the 1946 Year Book, pp. 1053-54. The work of the Department as it developed year by year is outlined in subsequent editions and is brought up to Mar. 31, 1954, in the following Sections.

Section 2.—Medical, Dental and Prosthetic Services

Medical Services.—It is the policy of the Department to give veterans the most modern medical treatment possible. Where a Departmental hospital is situated in proximity to a medical school, close co-operation is maintained between the two. Veterans hospitals are actively engaged in undergraduate and post-graduate teaching, and members of the medical faculties are employed in the hospitals with other specialists. Eleven hospitals have received approval by the Royal College of Physicians and Surgeons of Canada for advanced post-graduate teaching in internal medicine and general surgery. Seven of these are also approved for advanced post-graduate teaching in specialties. The majority of the consultant staffs at Departmental hospitals are employed on a part-time basis and are also engaged in medical teaching.

Professional and other members of the university staffs are employed as consultants and advisers in the same way as medical consultants. Thus, the Department receives expert advice in nursing, pathology, medical social services and other medical sciences.

---

* Contributed by the various Branches of the Department of Veterans Affairs.

Special centres for the investigation and treatment of arthritis, paraplegia, tuberculosis, etc., are active in the larger hospitals. Where Departmental facilities are not available, veterans with service-related disabilities receive treatment and hospitalization through the doctor of their choice.

During the year ended Mar. 31, 1954, 114 research projects were in progress, of which 70 were continuing and 44 were initiated during the year. Chief among these projects may be mentioned clinical research on atherosclerosis. The ultracentrifuge, located in Montreal, acts as the hub for several projects and receives specimens for analysis from all over Canada. A program of research into the problems of the ageing veteran has also been started and advice is being received from a special panel of experts. It is hoped to discover a practical means of assessing physiological age and to obtain valuable information regarding reasons for premature ageing. Research on the effects of ACTH and Cortisone on various conditions is continuing as are various follow-up studies of a clinical nature.

At Mar. 31, 1954, the Department was operating 9,974 beds in 19 separate institutions. Twelve were active treatment hospitals with 9,082 beds; two Health and Occupational Centres for convalescents with 365 beds; four Veterans' Homes with 327 beds, and one Tuberculosis Sanatorium with 200 beds.

On July 1, 1954, an amended Sect. 13 of the Veterans Treatment Regulations came into force, extending eligibility for treatment in DVA hospitals for non-pensioned conditions to a much larger group of veterans. Overseas veterans and those in receipt of disability pensions are now eligible for treatment for almost any non-pensioned condition, subject to facilities being available, if their annual incomes, less deductions for dependants, do not exceed $2,500. Annual income means income for the six months prior to admission to hospital plus the estimated income for the succeeding six months. Formerly only those veterans whose adjusted incomes did not exceed $1,200 were eligible.

Treatment is free for those veterans whose adjusted incomes do not exceed $720, but those with higher incomes are required to pay a part of the cost of hospitalization, the amount charged varying with their incomes but not exceeding a fixed and limited amount in any 12-month period. In addition to charges made in respect of income, these veterans may be required to pay for hospitalization from resources—cash, bonds or negotiable securities—or a combination of both. These liquid assets, however, may not be reduced below $500 for a single man or $1,000 for a married veteran for periods of hospitalization of 30 days or less. The figures increase progressively for longer periods until they reach $1,000 and $2,000, respectively, for 80 or more days of treatment.

All veterans have been eligible since 1950, under Sect. 23 of the Regulations, for treatment in DVA hospitals for non-pensioned conditions by guaranteeing the full cost of their hospitalization. During the year ended Mar. 31, 1954, approximately 2,500 veterans took advantage of this privilege.

Dental Services.—The number of dental treatments given during the years ended Mar. 31, 1941-54, were:—

Year ended Mar. 31—	*Treatments*
	No.
1941	99,590
1942	73,113
1943	102,554
1944	66,562
1945	249,170
1946	509,703
1947	2,700,052
1948	1,191,218
1949	218,173
1950	158,149
1951	128,206
1952	103,242
1953	103,255
1954	126,531

Prosthetic Services.—The Prosthetic Services Branch of the Department of Veterans Affairs supplies, by manufacture or procurement, all orthopædic and surgical appliances prescribed by the Treatment Services Branch. The maintenance and renewal of such prostheses for all eligible cases is also the concern of the Branch. A large modern centre at Sunnybrook Hospital, Toronto, together with 11 district centres and five visiting centres in the principal cities, extends the manufacturing, maintenance and fitting service across the country. This system ensures a standardization of parts of major prostheses, a control of quality of supplies and availability of service at all times.

A Research and Development Section at Toronto is constantly at work on improvements and, in co-operation with the manufacturing services, conducts the field-testing of new developments. Close contact is maintained with the National Research Council and with research committees in the United States and the United Kingdom.

During the year ended Mar. 31, 1954, 61,843 persons were supplied with appliances or accessories compared with 61,488 during the previous fiscal year. Total issues during these two years numbered 119,963 and 117,375, respectively.

Vetcraft Shops.—The Department operates Vetcraft Shops at Toronto and Montreal giving sheltered employment to disabled veterans. These shops manufacture poppy emblems and wreaths for sale by the Canadian Legion on Remembrance Day. An average of 47 veterans and 24 homeworkers are employed. Production value was approximately $230,500 for the 1953 campaign.

Section 3.—Pensions and Allowances

The Canadian Pension Commission.—The Commission administers the Pension Act and the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. The Head Office of the Commission is at Ottawa and representatives, known as Pension Medical Examiners, are located at each District Office of the Department.

It is the responsibility of the Commission to adjudicate upon claims for injury or disease resulting in disability or death during service with the Navy, Army or Air Force of Canada, and to consider claims for the supplementation of awards to Canadians who suffered disability or death while serving in the Armed Forces of the United Kingdom or its allies in World War I or World War II.

The Pension Act.—Under the Pension Act (R.S.C. 1952, c. 207 and amendments):—

(1) Pensions payable to veterans of the Fenian Raid and Northwest Rebellion under authority of Orders in Council are supplemented to the Canadian scale.

(2) Pensions payable by Great Britain on account of Canadians who served in the South African War are supplemented to the Canadian scale.

(3) Pensions for peacetime service prior to World War I payable under Orders in Council are supplemented to the Canadian scale.

(4) Pensions are paid in respect of service in World Wars I and II for injury or disease or the aggravation thereof resulting in disability or death attributable to or incurred during service.

(5) Pensions for peacetime service between World Wars I and II and subsequent thereto are paid when the injury or disease or aggravation thereof resulting in disability or death arose out of or was directly connected with service.

(6) Special provision was made for the Canadian Army Special Force and for those who had served in a theatre of operations prior to November 1, 1953.

In previous issues of the Year Book information is given regarding the development of Canadian pension legislation and yearly statistics regarding numbers and liability. As at Mar. 31, 1954, pensions in force were as follows:—

Payable	*Pensions*	*Liability*
	No.	$
To dependants	33,538	33,691,738
For disability	159,133	91,507,288
TOTALS	192,671	125,199,026

The pension paid for a total disability to a former member of the Armed Forces of the rank of major and below, with a wife and two or more children, amounts to a personal pension of $125 monthly, an additional $45 for his wife, $20 for the first child, $15 for the second, and $12 for each additional child. If he is helpless and in need of attendance, he is granted a helplessness allowance, which might vary from a minimum of $480 to a maximum of $1,400 per annum depending on the amount of attendance required. In the case of the blind, where the attendance required is not constant, the helplessness award is $960 per annum.

A pensioned widow of a deceased member of the forces who held the rank of major or lower rank receives $100 per month, with $40 for the first child, $30 for the second and $24 for each additional child. If she remarries, she is granted one year's pension as a final payment and pension usually continues for her children. Pension for a boy expires when he reaches the age of 16, and for a girl at 17. However, it may be continued to the age of 21 if the child is making satisfactory progress in a course of education approved by the Commission.

During the 1953-54 Session of Parliament the Pension Act was amended to provide additional pension for legally adopted children, for the wives of World War I pensioners married after Apr. 30, 1951, and before May 1, 1954, and for housekeepers of divorced pensioners with minor children. Widows of deceased pensioners who were not eligible only because their marriage to the pensioner was contracted after Apr. 30, 1951, may now be considered for pension if the marriage was contracted prior to May 1, 1954. Awards of helplessness allowance, which heretofore could not be paid during the period the pensioner was cared for under the jurisdiction of DVA, may now be paid if the pensioner is receiving out-patient treatment and is otherwise qualified. None of these benefits was made retroactive.

Civilian War Pensions and Allowances Act.—This Act extends pension legislation to a number of civilian groups whose work was closely associated with the World War II war effort, including merchant seamen, auxiliary services personnel, fire fighters who served in the United Kingdom, special constables with the Royal Canadian Mounted Police, overseas welfare workers, etc.

Veterans' Bureau.—The Veterans' Bureau, staffed by Pensions Advocates, most of whom are lawyers, was established in 1930 to assist those seeking war disability or dependant's pension in presenting their claims to the Canadian Pension Commission (*see* 1947 Year Book, p. 1142). This service is also given to persons applying for pension under the Civilian War Pensions and Allowances Act. There are District Pensions Advocates in all district offices of the Department and the service they provide is free of charge. Most applications for pension are handled in this way and, as at Mar. 31, 1954, the Bureau had approximately 6,200 active claims in hand.

During the 1953-54 fiscal year the Bureau was asked to assist in the preparation of ex-prisoner-of-war claims for compensation for maltreatment. As a result of this assignment, pensions advocates participated in the presentation of 3,100 claims before the War Claims Commission.

Section 4.—Rehabilitation of Veterans

The Veterans' Welfare Services Branch of the Department of Veterans Affairs is responsible for the administration of benefits available to discharged members of the Forces under the terms of the Veterans Rehabilitation Act, the War Service Grants Act, and the Veterans Benefit Act. The Branch renders assistance to veterans and advises them in social problems through the Social Service Section. It does not, however, duplicate any service that is already available to a veteran as a citizen.

War Service Grants Act.—The War Service Grants Act (R.S.C. 1952, c. 289) was amended by setting Dec. 31, 1954, as the last date for World War II veterans to apply for gratuities, except for veterans with overseas service who can demonstrate unusual reasons for delay in applying. The period during which application may be made for re-establishment credit was extended to Jan. 1, 1960, or 15 years after discharge, whichever is the later, and dependent children were included among those to whom the unused credit of a deceased veteran can be made available. Another amendment permits the use of re-establishment credit to obtain veterans insurance after the cut-off date for the purchase of veterans insurance has expired.

War Service Gratuities.—The amounts expended as gratuities under the War Service Grants Act up to Mar. 31, 1954, are shown in Table 1.

1.—Gratuity Payments under the War Service Grants Act, Years Ended Mar. 31, 1945-54

Re-establishment Credits.—Up to Mar. 31, 1954, 775,574 veterans re-establishment credit accounts had been closed, authorization having been given for the complete disposal of the credit. As of that date a cumulative total of $291,910,226 had been authorized for the various purposes listed in Table 2 and, in addition, $59,722,406 had been written off as the veterans concerned had chosen the alternative benefit of training, or had made application to settle under the Veterans' Land Act. Approximately 79 p.c. of the total re-establishment credit approved was used for homes. The expenditures made to Mar. 31, 1954, resulted from 2,036,654 approved applications for use of the credit.

2.—Re-establishment Credits Paid, by Required Purpose, Years Ended Mar. 31, 1953 and 1954, with Cumulative Totals to Mar. 31, 1954

Casualty Rehabilitation.—The Casualty Welfare Division, whose function is to provide vocational guidance, training, assistance in securing suitable employment and vocational after-care, maintains a register of all those veterans whose disabilities in relation to other factors, such as education, previous employment experience and personality, constitute a serious problem in occupational adjustment.

There were, up to Mar. 31, 1954, 39,587 registrations with this Division, of which 6,100 were still active cases. The registration, according to the type of disability, is shown in the following statement:—

Type of Disability	*Active Cases*	*Closed Cases*
	No.	No.
Amputation	246	2,067
Neuro-muscular and skeletal system disabilities	1,372	10,942
Total and partial loss of hearing or sight	296	2,618
Neurological cases	287	1,211
Heart and vascular system	308	3,324
Respiratory disabilities	2,653	8,223
Mental and emotional disabilities	284	757
Unclassified	654	4,345
TOTALS	6,100	33,487

Among the national agencies with which the Department is in continuous liaison in connection with casualty welfare are: the Army, Navy and Air Force Veterans Association; the Canadian Legion, BESL; the Canadian National Institute for the Blind; the Canadian Paraplegic Association; the Canadian Red Cross Society; the Canadian Tuberculosis Association; the National Society of the Deaf and Hard of Hearing; and War Amputations of Canada.

During the fiscal year ended Mar. 31, 1954, the total number of registrants increased by 1,502 cases but the number of active cases decreased by 562. Progress in the rehabilitation of the cases between Mar. 31, 1953 and Mar. 31, 1954, was as follows:—

Status	*Mar. 31, 1953*	*Mar. 31, 1954*
	No.	No.
Employed	31,267	31,607
Unemployed	669	912
Receiving treatment, training or other services	2,887	2,716
Rehabilitation not feasible	2,088	2,319
Closed on WVA	1,174	1,228
Left Canada	—	805
TOTALS	38,085	39,587

Social Service.—The Social Service Section is staffed by professionally qualified social workers who act as consultants to Veterans Welfare Officers dealing with social problems of veterans and their dependants and handle the more complex problems directly. They also have the responsibility of training staff in social welfare principles and methods. The Section maintains close liaison with a wide variety of health and welfare agencies, both public and private, to ensure that veterans and their dependants obtain from the community all possible assistance to which they may be entitled as citizens.

At the request of the Department of National Defence, the Department of Veterans Affairs inquires into home circumstances of members of the Armed Forces. These inquiries are designed to assist the Department of National Defence in making administrative decisions regarding applications for compassionate leave, posting and discharge, and to help the dependants by counselling and, where necessary, by referring them to community agencies.

This Service was created to meet needs arising out of the expansion of the Armed Forces caused by the Korean situation, but the cessation of fighting there has not materially affected the demand. During the year ended Mar. 31, 1954, 3,561 cases were referred by the Department of National Defence, compared with 3,700 in the previous fiscal year.

Rehabilitation of Older Veterans.—Through its "Older Veterans" Welfare Adviser and Counsellors, the Department of Veterans Affairs continues to keep before employers of Canada the advantages offered in the employment of older veterans, with the result that, out of a present population of 340,000 veterans of World War I whose average age is nearly 65 years, fewer than 13,000 are registered with the National Employment Service as unemployed.

In these efforts the Department works in close co-operation with the employer associations and the Department of Labour; a number of plants have been surveyed for the purpose of assessing openings available to older age groups and other surveys are under way or projected. Active liaison is maintained with the Canadian

Welfare Council in the study of problems of the aged and with the Sub-Committee of Older Workers National Advisory Committee on manpower problems and rehabilitation of the aged. Also, the closest co-operation with the Department on behalf of older veterans is provided by national veterans organizations through their country-wide network of local committees. Collectively, about 50,000 individual cases are assisted annually.

Assistance Fund.—New Assistance Fund Regulations were made by Order in Council P.C. 3730, dated Aug. 6, 1952, following the revision of the War Veterans Allowance Act. A veteran or a widow receiving an allowance under the Act, with no other income, may, if considered to be in need under the Regulations, be granted up to $120 per annum from the Fund. Assistance is paid in the form of a continuing monthly grant in cases where income is insufficient to meet the cost of rent, fuel, food and health needs calculated according to the prescribed formula. In other cases, a single grant may be given to meet an emergency. Applicants are also assisted in obtaining financial aid from any other source to which they may be entitled, and to utilize all available community health and welfare resources.

During the year ended Mar. 31, 1954, District Committees awarded $155,334 in single payments and $192,127 in continuing monthly grants, a total of $347,461. Of 3,526 applicants during this period, 3,189 or 90 p.c. were assisted. In addition, 1,251 persons who applied in the previous year were assisted without making a further application.

Educational Assistance.—Assistance for the university training of veterans is provided under the Veterans Rehabilitation Act as outlined in the 1948-49 Year Book, pp. 321-322. Owing to the time limit of 15 months after discharge for commencing university training, the number of those beginning courses has diminished appreciably. The number being assisted during the academic year 1953-54 was approximately 630 of whom 55 were veterans of the Korean Force. This compares with 1,400 assisted in 1952-53 of whom 50 were from the Korean Force, 8,000 assisted in 1951-52, 8,000 in 1950-51, 15,000 in 1949-50, and a peak of 24,000 in 1948-49.

In addition to university training, about 640 veterans and merchant seamen received vocational training under the Veterans Rehabilitation Act during the 1953-54 fiscal year. Correspondence courses are also available to veterans—and to non-veterans who are arthritics, in TB sanatoria or provincial reform institutions—and to members of the Armed Forces. During the year ended Mar. 31, 1954, a total of 9,188 registrations for these courses were received, of which about two-thirds were from veterans.

The Educational Assistance Act (Children of War Dead) became effective July 1, 1953. The purpose of this legislation is to make it financially possible for pensioned sons and daughters of men who have died as a result of war service to proceed with educational training beyond the secondary school level. An eligible student may receive a monthly allowance of $25 while actually in full-time intramural attendance at an educational institution in Canada requiring high school graduation (or equivalent) for admission. Tuition and other fees on behalf of these students are payable in the same way, and under the same conditions, as for World War II or Korean Force veterans receiving educational training. Since the inception of this assistance, in July 1953, 306 applications for benefit have been approved.

Rehabilitation Benefits, Korean Force Veterans.—During the 1953-54 Session of Parliament, the Veterans Benefit Act was amended by including therein the regulations pertaining to benefits for those who served in the Korean theatre of war. Honourably discharged veterans of the Korean Force are eligible for the benefits available to veterans of World War II.

To be eligible for these benefits, a serviceman must have served in, or departed for, the theatre of operations prior to July 27, 1953, which was the date of the "cease fire". The period of entitlement ends when the serviceman next returned to North America, or was posted outside the Korean theatre, or Oct. 31, 1953, whichever is the earlier.

The benefits provided are contained in the following Acts: War Service Grants Act; Veterans Rehabilitation Act; Pension Act; Veterans' Land Act; Veterans Insurance Act; Reinstatement in Civil Employment Act; Civil Service Act; Veterans Business and Professional Loans Act; Public Service Superannuation Act; Unemployment Insurance Act.

The privileges of the War Veterans Allowance Act have also been made available to the Korean veterans on the same basis as for veterans of World Wars I and II.

The Veterans' Land Act.—In the year ended Mar. 31, 1954, 4,047 veterans were approved (net) for settlement under the Act (R.S.C. 1952, c. 280). Of this number 76 p.c. were small holders and the others were full-time farmers, commercial fishermen and settlers on Crown lands. This has been the settlement trend during recent years. At the end of March 1954, 65,140 veterans had been approved for financial assistance, involving a commitment of public funds amounting to $312,866,658. Active accounts numbered 58,460, including 1,406 Indians who were assisted to settle on reservations. The difference represents veterans who had terminated their contracts for various reasons, but only 116 of these terminations were a result of foreclosure or, with the consent of the Advisory Board in the province concerned, by rescission of contract.

Included also in the terminations are the first five veterans to fulfil the terms of their contracts and earn their conditional grants. In all five cases, the veterans' contracts were prepaid in full and they received title to both the real estate and chattels which they were assisted to purchase under the Act.

The payment record of the veterans continued to be favourable. Only 2 p.c. of 27,054 settlers paying on an annual or semi-annual basis, mostly farmers and fishermen, had arrears exceeding $200; and only one-tenth of 1 p.c. of 26,492 on a monthly basis, mainly small holders and a few fishermen, had arrears exceeding $100.

Approximately 15,800 veterans were meeting their payments by prearranged systems of payment. This number was made up of 1,170 share-of-crop agreements in effect in the spring wheat areas of the Prairie Provinces, 5,466 pension orders and salary assignments, and 9,184 veterans using the post-dated cheque plan, introduced in 1952. In addition, 2,203 veterans had completely prepaid their contract debts.

Supervision activity during the year continued with the objective of assisting the settlers to achieve increased security through the more efficient use of their properties and resources. In this respect much constructive effort was put forth during the year to neutralize, as far as possible, the effect of narrowing margins in those farm enterprises where selling prices for produce continued weak.

Analysis of 11,697 consecutive reports on small-holding properties during the year demonstrated that the majority of these veterans are using their properties as Parliament intended. On the basis of this analysis, 85 p.c. of the 27,757 active small-holding accounts had vegetable gardens, and about one-half of the total were producing, either for home use or sale, food worth at least the amount of their payments to the Administration. About 25 p.c. derived secondary incomes averaging more than $350 annually. The estimated value of the produce from all small holdings exceeded $6,500,000. In addition to these tangible returns, the analysis showed that about 60 p.c. have maintained and developed their properties so that these have substantially increased in value.

3.—Summary of Settlement Status, Loans and Grants under the Veterans' Land Act, as at Mar. 31, 1954

Item	Full-Time Farming	Small Holdings	Commercial Fishing	Provincial Lands	Federal Lands	Total
Qualified for settlement. No.	31,250	44,433	1,075	5,360	423	82,541
Approved for financial assistance............ No.	25,938	31,966	947	4,530	353	63,734
Amounts approved for land and permanent improvements....... $	98,647,581	157,393,167	2,837,973	4,302,503	759,987	263,941,211
Amounts approved for stock and equipment. $	31,111,942	7,751,164	993,599	5,862,388	11,990	45,731,083
Average amounts approved per veteran... $	5,003	5,166	4,046	2,244	2,187	4,859
Average conditional grants per veteran... $	1,950	1,387	1,748	2,244	2,187	1,686

In addition to the above, there were 1,406 Indian veterans on reserve lands for whom loans amounting to $1,826,797 for land and improvements and $1,367,567 for stock and equipment were approved.

New houses started during 1953-54 numbered 1,876, an increase of 44 p.c. over the previous year. Alterations and additions to existing properties numbered approximately 1,500, an increase of about 50 p.c. over 1952-53. Virtually all of the latter and 84 p.c. of the former were undertaken by the veterans themselves who acted as their own contractors and, in addition, did much of the unskilled and semi-skilled construction work. The number of new houses, completed or under construction, from inception of the Act in 1942 to the end of the 1953-54 fiscal year, was 18,549.

4.—Summary of House Construction under the Veterans' Land Act, as at Mar. 31, 1954

Item	Full-Time Farming	Small Holdings	Commercial Fishing	Provincial Lands	Federal Lands	Total
	No.	No.	No.	No.	No.	No.
Houses completed (from 1942)...........	1,248	13,866	232	1,183	91	16,620
Houses under construction..............	154	1,583	14	163	15	1,929

Net Applications for New Housing.	**1,683**	**16,204**	**257**	**1,503**	**107**	**19,754**

During the 1953-54 Session of Parliament the Veterans' Land Act was amended by adding to the former Act (now known as Part I) Parts II and III. Part II provides for technical, supervisory and financial assistance to eligible veterans of World War II and the Special Force considered competent to contract to build their own homes on suitable lots of any size. Construction courses may be provided for prospective veteran contractors who need training before undertaking such a contract. To be eligible, a veteran must have had no benefits under Part I of the Act nor have received more than nine months of university training. The veteran must also be approved for a loan under the National Housing Act and, as a minimum down payment, must provide the Director with a lot worth at least $800 or pay the difference between the appraised value and that amount. Maximum assistance of $8,000 is made available in the form of interest-free advances as the work progresses. Upon completion of construction these advances are consolidated into a 25-year, 5½-p.c. mortgage in favour of Central Mortgage and Housing Corporation or an approved lender, the proceeds of which are used to reimburse the VLA Revolving Fund of $15,000,000 set up to finance operations. Under this Part of the Act, veterans receive no conditional grant, as under Part I, but they retain their right to re-establishment credit. Veterans also receive supervision during construction, free plans and drawings and legal services up to and including the deed and mortgage.

Part III provides for fully repayable, 5-p.c. loans up to $3,000 for full-time farmers already settled or to be settled, or $1,400 for small holders or commercial fishermen not yet settled, which may be authorized in addition to the assistance available under Part I. The loan may not be amortized over a longer period than the remainder of the veteran's existing contract under Part I. The veteran must contribute an amount equal to one-half of the loan, either in cash or equity in the form of excess payments or improvements to the property. Loans may be used to purchase land, erect buildings or effect improvements that will tend to increase production and promote soil conservation. With provision for these additional loans, maximum expenditures now possible under Parts I and III combined, when the veterans' contributions are included, amount to $10,500 in the case of full-time farmers and $8,100 in the case of small holders and commercial fishermen.

Veterans Insurance.*—The Veterans Insurance Act which came into force on Feb. 20, 1945, provides that the following persons may contract with the Government of Canada for life insurance, usually without medical examination, during the periods of eligibility shown:—

Eligibility arising out of Service in World War II:	*Applications must be approved by:*
(a) Veterans, and others deemed by Statute to be veterans.	Dec. 31, 1954 or 10 years after discharge, whichever is later.
(b) Members of the regular Forces who served during the War and were not discharged; Merchant Seamen if eligible to receive a special bonus or war service bonus; widows or widowers of veterans who did not have veterans insurance.	Dec. 31, 1954.
Eligibility arising out of Service in the Special Force since July 5, 1950:	
(c) Persons who served on the strength of the Special Force in a theatre of operations and who have been discharged; members of the regular Forces who have had such service in a theatre of operations; persons who were pensioned under the Pension Act because of a disability attributable to such service.	Oct. 31, 1958.
(d) Widows of veterans described in *(c)*.	Oct. 31, 1958, or within three months after the veteran's death, whichever is the later.
(e) Widows of persons who would have been eligible on discharge but who died before discharge.	Within three years after the death of the member of the Forces.

---

* Revised by C. F. Black, Superintendent, Veterans Insurance, Department of Veterans Affairs, Ottawa.

The amount of insurance may be any multiple of $500 up to a maximum of $10,000. The plans of insurance available are 10-payment life, 15-payment life, 20-payment life, and life with premiums payable until age 65 or age 85. The policies are non-participating.

Premiums on veterans insurance may be paid monthly, quarterly, semi-annually or annually. They may be paid in cash or from re-establishment credit or by deduction from any pension granted under the Pension Act. The policy contracts include a waiver-of-premium disability provision. No extra premiums are charged for residence, travel or occupational hazards.

At the end of the second policy year a liberal cash value is available. It may by used alternatively to provide reduced paid-up insurance or extended term insurance. A veteran's insurance policy is not assignable, nor is a loan value granted.

The maximum amount of insurance money that will be paid in a lump sum at death is $2,000; the balance must be paid to the beneficiary as an annuity certain or as a life annuity with or without a guaranteed period.

5.—Summary Statistics of Veterans Insurance, Years Ended Mar. 31, 1949-54

Year Ended Mar. 31—	Insurance Issued During Year		Insurance in Force at End of Year		Death Claims Approved During Year	
	No.	$	No.	$	No.	$
1949	4,615	14,074,500	22,293	63,836,743	91	245,500
1950	2,316	7,448,500	23,722	68,016,514	111	340,080
1951	3,247	10,718,000	25,917	75,020,885	130	400,500
1952	2,302	8,322,500	26,985	79,115,734	158	346,500
1953	2,167	7,849,000	27,731	81,826,281	186	530,000
1954	1,666	6,109,500	27,909	82,619,669	192	532,500

War Veterans Allowance Act.—This Act (R.S.C. 1952, c. 340) is administered by the War Veterans Allowance Board. The allowance provides assistance to veterans with service in a theatre of actual war or who, in lieu of such service, are in receipt of disability pensions and have reached the age of 60, or earlier if their physical condition prevents them from earning their own living. Veterans who served in both World Wars I and II, but not in a theatre of actual war in either, are also eligible when they reach the age of 60, or earlier if they become permanently unemployable. The allowance may also be paid to the widows of veterans who would themselves have been qualified, but in the case of widows it is payable at the age of 55, or earlier if their physical condition makes the allowance necessary. The allowance is not paid as a right but is subject to certain financial tests.

The Act was completely revised in 1952, and the new rates and other changes, introduced at that time, are set forth in detail in the 1954 Year Book, pp. 275-276. A report on the Assistance Fund, introduced at the same time for War Veterans Allowance recipients, is given on p. 288.

As at Mar. 31, 1954, there were 43,446 WVA recipients including 10,706 widows. The liability for 1953-54 was $27,725,852.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system has to grow and adapt itself to the requirements of the people, and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland, although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist to-day are based upon the British North America Act of 1867. Sect. 91 of that Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect. 101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931, effected important changes particularly by abrogating the Colonial Laws Validity Act, 1865 (U.K.), and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 70-72, and provincial judiciaries are dealt with briefly at pp. 72-73; more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

---

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

At the time of Confederation, each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts some of which dealt with offences of special kinds, and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law,* Burbidge's *Digest of the Canadian Criminal Law,* and the relevant Canadian statutes, was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Opium and Narcotic Drug Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between "law" and "procedure". Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes, it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."*

With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of "offences" and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and criminal sexual psychopaths partake of the nature of both classes.

In February 1952, a Royal Commission, appointed three years earlier for the purpose of making a complete revision of the Criminal Code, presented its report with a draft Bill. This has since been before successive sessions of Parliament and received final passage on June 15, 1954. The new Code, in force on Apr. 1, 1955, effects changes in all the categories outlined above, but before making any commen upon them, there should be some mention of the system that existed under the repealed Code.

---

* Salmond on *Jurisprudence,* 7th Edition, p. 496.

Offences under the Criminal Code were made either indictable or non-indictable, that is to say, punishable on summary conviction, instead of being, as under English law, felonies or misdemeanours. A few, for example, common assault and driving while intoxicated, were triable under either procedure.

Trial by jury was the accepted mode of trial of indictable offences, but this was subject to such exceptions that in practice the proportion of indictable offences so tried was very small. Over a few, a magistrate acting under Part XVI of the Code without a jury had absolute jurisdiction. In all but a few of the other cases the accused might choose summary trial before such a magistrate, or he might choose speedy trial, again without a jury, before a judge defined in Sect. 823 to include a judge of the county or district court and, in the Province of Quebec, a judge of the Sessions of the Peace or a district magistrate. However, this right to elect was subject to a prerogative of the Attorney General to require trial by jury where the offence charged was punishable by imprisonment for more than five years. The offences which did not permit this election were treason and treasonable offences, assaults on the Sovereign, mutiny, unlawfully obtaining and communicating official information, the taking of oaths to commit certain crimes, seditious offences, libels on foreign sovereigns, spreading false news, piracy, corruption of judicial officers or officers employed in prosecuting offenders, frauds on the government, breach of trust by public officers, municipal corruption, the selling of appointments to any office, murder, attempt to murder, conspiracy to murder, accessory after the fact to murder, manslaughter, rape, or attempt to commit rape, defamatory libel, combination in restraint of trade, conspiring or attempting to commit or being accessory after the fact to the other offences mentioned, also offences against the Canada Election Act including bribery or undue influence, personation or other corrupt practice.

Capital offences included treason as defined, murder, piracy in cases of violence, and rape. This is a drastic modification of the criminal law as it stood a century and a half ago. Further details of law and procedure are given in the 1951 Year Book, pp. 256-258.

Although the new Code effects changes in detail it continues the general features of the former system.

Turning now to the changes effected by the new Code, the following will indicate the most important, although by no means all of them.

With reference to the capacity to commit crime, the exemption of persons under 14 years of age from a charge of rape is expanded to include some other sexual offences. The law concerning infanticide, which had been the subject of some judicial criticism, has been modified by definition, and provision is made whereby a justice holding a preliminary hearing may remand the accused woman for mental examination. However, if at her trial on such a charge it appears that she caused the death of her child but it is not established that she was mentally disturbed within the definition, she is not entitled to be acquitted unless she establishes that her act was not wilful.

The following new offences are specified:—

(a) The giving of evidence by a witness in a judicial proceeding contradictory to evidence given by him in a previous judicial proceeding (Sect. 116).

(b) Trespass at night on property near to a dwelling house thereon (Sect. 162).

(c) The former Sect. 399, under which it was an offence to receive or retain anything obtained by crime, has been altered (Sect. 297) so as to make it an offence to have anything in possession knowing that it was so obtained.

(d) The fraudulent use of slugs or other material in machines that vend merchandise or services or collect fares or tolls has been made an offence (Sect. 397).

It will no longer be possible to lay charges at common law nor under English statutes nor under pre-confederation statutes or ordinances (Sect. 7). By way of complement to this provision certain common law offences have been codified, namely, indemnification of bail [Sect. 119(2)(d)], public mischief (Sect. 120), compounding of felony (Sect. 121), and common law conspiracy [Sect. 408(2)].

Treason has been redefined with emphasis on the security of the State, although the traditional elements of the offence are continued. The definition includes the communication of military or scientific information to an agent of a State other than Canada by a person who knows or ought to know that that other State may use it for purposes prejudicial to the safety or defence of Canada, a provision new in this context. Punishment of 14 years' imprisonment is prescribed for such spying in time of peace.

There is an important change in that criminal negligence has been made a distinct offence, the gravamen of which is a wanton or reckless disregard for the lives or safety of others (Sects. 191 to 193). Sect. 221 deals specially with this offence when committed in the operation of a motor-vehicle.

The former Sect. 206 relating to gross indecency has been made to apply to both sexes (Sect. 149).

Breach of contract continues to be a crime under certain circumstances, particularly in reference to public utilities. In this regard the former Sect. 499 has been redrawn with certain savings in the interests of organized labour (Sect. 365). The law with regard to wilful damage to property has been largely consolidated with similar saving clauses in Sects. 52 (sabotage) and 372.

Leaving aside the matter of capital punishment with the observation that the new Code does not continue it for the offence of rape, it may be said that minimum punishments are not prescribed except for thefts from the post office, driving a motor-vehicle while intoxicated or with impaired ability, and for criminal sexual psychopaths. With regard to these motoring offences the power to prohibit driving is made applicable to a person convicted of driving with impaired ability.

Except in cases of defamatory libel and in summary conviction matters, the courts are not empowered to order the payment of costs in criminal cases.

A general penalty in summary conviction matters has been provided [Sect. 694(2)] leaving it to the courts to apply it appropriately in individual cases.

The former Sect. 1081 provided that in certain instances a court could not suspend sentence without the consent of the Crown. This requirement has been eliminated.

Under the new Code a peace officer will be able to seize not only things mentioned in a search warrant but also things not so mentioned that "on reasonable grounds he believes have been obtained by or have been used in the commission of an offence" (Sect. 431). There is also a provision whereby a person interested in goods under seizure may obtain an order permitting him to examine them and to appeal against an order of forfeiture.

The former detailed provisions limiting the time in which prosecutions should be begun have largely disappeared. They are continued only with reference to treason [Sect. 48(1)], certain sexual offences [Sect. 184(4)] and summary conviction matters [Sect. 693(2)]. Sect. 672(2) prescribes a limitation for the bringing of penal actions.

A new provision (Sect. 671) will prevent the discharge of sureties under a recognizance by reason of the arrest of their principal for an offence committed while he is on bail.

With respect to evidence, there has been codification of a common law rule to require that on charges of rape and other sexual offences the judge must charge the jury that it is unsafe to convict on the evidence of the prosecutrix unless it is corroborated or unless they are satisfied of its truth beyond a reasonable doubt. Other changes in respect of corroborative evidence are that it is to be required in cases of incest but not upon charges of living on the avails of prostitution, of a householder permitting defilement, or of conspiracy to defile.

Provision to facilitate the proof of marriage in cases of bigamy is provided in Sect. 241. By Subsection (2) a certificate of marriage issued under the authority of law becomes *prima facie* evidence of the marriage or form of marriage to which it relates, without formal proof of signature.

It is perhaps with reference to trial procedure that the most far-reaching changes have been made. A rule of practice in England, not grounded in statute, whereby an accused may ask that outstanding offences be taken into consideration in passing sentence upon him, has been placed in the Code [Sect. 421(3)]. This will apply to permit that offences committed by the accused in one province may be taken into consideration in proceedings against him in another, provided that the Attorney General of the province first mentioned consents to this being done.

There is provision that an offence committed on a vehicle, vessel or aircraft during the course of a journey may be tried in any jurisdiction through or over which the journey proceeded (Sect. 419). This modifies the former Sect. 584(c).

The absolute jurisdiction of magistrates under Part XVI has been changed by taking out the cases of indecent assault which were formerly subject to it, and by adding to it the offences in respect of lotteries, and cheating at play.

There will be a right to elect for a non-jury trial in cases of spreading false news, fraud on government, breach of trust by public officer, municipal corruption and defamatory libel. This is the effect of removing these offences from the list of offences specified on p. 295 (*cf.* Sect. 413 and the former Sect. 583). It should be noted too that a judge or magistrate trying an indictable offence will have power under the new Code to try an issue of insanity if the question arises before him. In this, Sects. 523 and 524 extend the provisions of the former Sects. 966 and 967.

There is an important change embodied in Sect. 9 which gives a right of appeal to a person summarily convicted of contempt of court.

It has been mentioned that a general penalty has been provided in summary conviction matters. It may be mentioned finally that punishment by imprisonment for indictable offences has been appropriated to a scale, namely, two years, five years, 10 years, 14 years, life.

Attention must be called to the fact that the subjects of capital and corporal punishment, as well as the law relating to lotteries, are being studied by a joint committee of the Senate and House of Commons, and that a Royal Commission has been appointed to consider questions of mental health in their relation to the criminal law.

Section 2.—Adult Offenders and Convictions

The main interest in criminal statistics is concerned with those persons guilty of the more serious crimes. Such offenders are fewer than those who commit non-indictable offences but, from the standpoint of the protection of society, they are more important.

In 1949, the basis of the statistics of indictable crimes was changed from *convictions* to *persons* so that the figures for 1949 and subsequent years are not comparable with those for previous years. Where any person is prosecuted at the same hearing for several offences, one offence has to be selected for tabulation. The rule followed is to select that for which the proceedings were carried to the furthest stage—to conviction and sentence if the prisoner were tried on several charges; if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; if the final result of proceedings on two or more charges were the same, the most serious offence (as measured by the maximum penalty allowed by the law) appears in the tables. Where a person was prosecuted for one offence and convicted of another (e.g., charged with murder and convicted of manslaughter), the case appears only under the offence for which he was convicted.

In the case of non-indictable offences, the figures continue to be based on convictions and are thus comparable with those for earlier years.

Statistics include only cases finally determined within the year. Cases not entirely disposed of within the year (e.g., tried but sentence postponed) are held over for the next year's report.

In 1950 the reporting year for criminal statistics was changed from the 12 months ended Sept. 30 to the calendar year. Also, figures for Newfoundland were included for the first time in 1951.

Subsection 1.—Adults Convicted of Indictable Offences

During the year 1952, the courts of Canada dealt with 35,086 adults charged with 51,125 indictable crimes, of whom 29,761 were found guilty of 41,591 offences. This was an increase of 2·7 p.c. over the number of persons convicted in 1951.

1.—Adults Convicted of Indictable Offences and Ratio per 10,000 Population 16 Years of Age or Over, by Province, 1951 and 1952

Province or Territory	1951		1952	
	Persons Convicted	Ratio per 10,000 Population	Persons Convicted	Ratio per 10,000 Population
	No.	No.	No.	No.
Newfoundland	490	23	534	24
Prince Edward Island	109	17	89	14
Nova Scotia	1,296	31	1,216	28

Yukon and Northwest Territories	75	46	91	55
Canada	**28,980**	**30**	**29,761**	**30**

Indictable offences are grouped into six classes. Class I covers crimes against the person; persons convicted of assaults of various kinds and obstructing police represented 81·7 p.c. of this group in 1952. In that year, 18 persons were convicted of murder, three of attempted murder and 77 of manslaughter as compared with 15, 7 and 92, respectively, in 1951. The number of offenders in the class as a whole was 8·4 p.c. higher than in 1951.

Classes II, III, IV and V cover offences against property. Thieves predominate among the offenders in these classes though the number was slightly lower in 1952 than in 1951. Burglars and robbers whose serious crimes involve acts of violence are the next most numerous, and they increased by 4 p.c. in 1952 as compared with 1951. The number of persons who maliciously damaged property increased by 1·9 p.c. in the same comparison.

Miscellaneous offences are listed in Class VI. There were 367 offenders under the Opium and Narcotic Drug Act, of whom 316 were convicted of possessing heroin; 262 were males; and 327 were born in Canada. British Columbia courts convicted 69·2 p.c. of the drug offenders and Ontario courts 19·1 p.c.

2.—Adults Charged and Convicted of Indictable Offences, by Class of Offence, 1951 and 1952

[1] Offences against females include: abortion, assault against females or wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape and seduction. [2] Offences reported under this classification for the first time in 1952.

ADULTS CONVICTED OF INDICTABLE OFFENCES BY CERTAIN CLASSES 1949—52

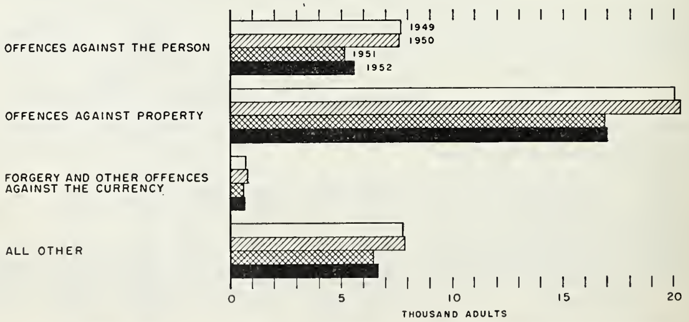

Table **3** shows that, in 1952, 58·7 p.c. of the persons convicted of indictable offences had not gone beyond elementary school grades in education, 40·0 p.c. were 24 years of age or younger, 11·3 p.c. were 45 years of age or over, and 73·8 p.c. lived in urban centres. Of these offenders, 93·4 p.c. were males; 89·8 p.c. were born in Canada; 55·2 p.c. were unmarried; 23·0 p.c. were recorded as labourers; and 6·9 p.c. had no remunerative employment. These percentages changed very little from comparable percentages for 1951.

3.—Persons Convicted of Indictable Offences, classified by Occupation, Marital Status, Sex, Birthplace, etc., 1951 and 1952

Item	1951	1952

[1] Includes housewives.

Female Offenders.—There were 1,976 female offenders convicted of indictable offences in 1952. The Provinces of Ontario, Manitoba, British Columbia, and the Yukon and the Northwest Territories showed an increase over the previous reporting period. Nearly 44·3 p.c. of the women convicted in 1952 were found guilty of theft and receiving stolen goods, and 11·8 p.c. were committed for assault. Eight women were convicted of manslaughter.

4.—Females Convicted of Indictable Offences, by Province, 1951 and 1952

Province or Territory	Females Convicted		Females Convicted to Total Convictions	
	1951	1952	1951	1952

Disposition of Cases and Recidivism.—Of all suspects before the courts for indictable crimes, 84·8 p.c. were adjudged guilty in 1952; the convictions against males (85·2 p.c.) constituted a higher percentage than those against females (79·8 p.c.) and varied greatly as between provinces. The Yukon and Northwest Territories together showed the highest percentage (100 p.c.) of convictions and Nova Scotia the lowest percentage (71·4 p.c.).

6.—Persons Charged and Convictions for Indictable Offences, by Province, 1951 and 1952

Province or Territory	1951			1952		
	Charges	Convictions		Charges	Convictions	
	No.	No.	p.c.	No.	No.	p.c.

Detention because of insanity	40	51	Reiterated convictions	5,975	6,162
			Not given	4,622	6,586

Sentences.—The types of sentences were in much the same proportion in 1951 and 1952. In the latter year, 31·9 p.c. of the persons convicted of indictable crimes were fined, 36·2 p.c. were sent to gaol without option of fine, 6·4 p.c. were committed to reformatories and 6·4 p.c. to penitentiaries, and 19·0 p.c. were given suspended sentences or put on probation. Five habitual criminals were given preventive detention. Eight persons received life sentences and 17 were given the death penalty.

8.—Sentences given for Indictable Offences, by Province, 1952 with Totals for 1951

Court Proceedings.—In 1952, 62·0 p.c. of the persons tried by jury were convicted; speedy trials (by court after waiver of jury trial) brought convictions in 73·4 p.c. of the cases so tried and summary trials by magistrates ended in convictions in 86·3 p.c. of the cases.

Of persons charged on indictment, 90·7 p.c. were tried by magistrate or family and juvenile court judge, 6·6 p.c. in county and district courts and 2·6 p.c. in higher courts.

Subsection 2.—Young Adult Offenders (16-24 Years)

Young men and women from 16 to 24 years of age formed 40·0 p.c. of the criminal population who committed indictable offences in 1952, although they comprised only 19·8 p.c. of the total population of 16 years of age or over. As this age group includes some of the most daring offenders, who may be already experienced criminals, as well as first offenders likely to be turned from crime by further education and training, it seems worth while to give consideration to offenders in this group as distinct from offenders in the older age groups.

Almost 73 p.c. of the young offenders were tried in three provinces—Ontario (39·8 p.c.), Quebec (20·9 p.c.) and British Columbia (11·7 p.c.); 45·6 p.c. of them were still under 20 years of age.

11.—Young Adult Offenders, by Age Group, Sex and Province, 1952

Age Group and Sex		N'f'ld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon and N.W.T.	Canada

Totals.........		**235**	**36**	**516**	**307**	**2,489**	**4,733**	**626**	**448**	**1,079**	**1,390**	**34**	**11,893**

Over one-third (36·2 p.c.) of the men guilty of manslaughter in 1952 and 31 of the 41 convicted of rape were under 25 years of age. Two-thirds (64·6 p.c.) of the men guilty of robberies and burglaries were in this group; 44·7 p.c. of those convicted of offences against property without violence, which includes all thefts; 74·6 p.c. of those responsible for stolen automobiles; 51·1 p.c. of those who maliciously damaged property; 45·4 p.c. of those found carrying offensive weapons and 54·5 p.c. of the prison escapers.

There were 719 young women offenders under 25 years of age in 1952, 80 fewer than in 1951. Nearly half of them (353) were guilty of theft and receiving stolen goods. Of the 105 women offenders convicted under the Opium and Narcotic Drug Act, 37 were in this group, as well as 34 of the 61 found guilty of forgery and uttering; 42 of the 49 female prison escapers were also young women.

---

[1] Offences against females include: abortion, assault against females, assault against wife, indecent assault, carnal knowledge, incest, procuration, rape, attempted rape, seduction and wife desertion.
[2] Offences were reported under this classification for the first time in 1952.

Table **13** shows the proportions of young offenders per 100,000 population in three age groups.

13.—Numbers per 100,000 Population of Young Adults Convicted of Indictable Offences, by Age Group, 1951 and 1952

Age Group	1951			1952		
	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year
	No.		p.c.	No.		p.c.
16-17 years	2,780	659	− 5·0	2,538	596	− 8·7
18-19 "	2,757	652	−11·3	2,891	680	+ 4·9
20-24 "	6,322	581	− 5·9	6,464	588	+ 2·2

The sentences meted out to these young people varied somewhat from those given to offenders over 24 years of age. In 1952, a higher proportion of them were given suspended sentences, put on probation or sent to reformatories and a lower proportion were fined or given gaol sentences.

14.—Disposition of Sentences for Indictable Offences, by Sex, 1952

Disposition of Sentences	Males		Females	
	16-24 Years	25 Years or Over	16-24 Years	25 Years or Over
	p.c.	p.c.	p.c.	p.c.
Suspended sentence	16·0	10·1	18·8	17·3
Probation	8·7	3·6	18·5	9·8
Fined	24·3	37·0	20·0	37·9
Gaol	34·9	38·0	30·3	29·2
Reformatory	9·2	4·5	10·9	3·3
Penitentiary	6·9	6·7	1·5	2·5
Death	—	0·1	—	—

Through suspending sentence and probation supervising, many of these young offenders received another chance to make good, and reformatory training gave others an opportunity to better their employment possibilities. It is interesting to note that about one-third of the males under 25 were recorded as labourers, which indicates that they had no particular skill by which to earn a living; the proportion of male offenders over 25 years of age recorded as labourers was 21·2 p.c. Almost 4 p.c. of the youths were students and another 5·3 p.c. were unemployed as compared with 1·6 p.c. of the older men. Approximately three out of four of them lived in urban centres.

Of the young female offenders, 36·6 p.c. were not gainfully employed; domestic or personal service was the occupation of 36·2 p.c. and 84·7 p.c. lived in urban centres.

Since those convicted of non-indictable offences are not reported by age of offender, it is not possible to segregate young people of 16 to 24 years of age who have had summary convictions.

Subsection 3.—Convictions for Non-indictable Offences

Non-indictable offences—those not expressly made indictable—include all offences against provincial statutes and municipal by-laws. Non-indictable offences are triable by magistrate or justice of the peace under Part XV of the Criminal Code or under the provincial summary convictions Acts, as the case may be.

It is debatable how far summary convictions are of a criminal nature and how much their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort as, for example, parking violations or exercising callings without licence, but they do not involve violence, cruelty or serious dishonesty. On the other hand, offences as serious as cruelty to animals and contributing to juvenile delinquency are included under this classification and such indictable offences as common assault and driving with ability impaired may be tried on summary conviction.

Summary convictions increased by 19·7 p.c. to 1,565,707 in 1952 from 1,308,466 in 1951. Increases were general in all provinces.

15.—Convictions for Non-indictable Offences, by Province, Years Ended Sept. 30, 1943-50, and Dec. 31, 1951-52

NOTE.—Figures for years before 1951 are for the 12 months ended Sept. 30; 1951 and 1952 figures are for the calendar year. Statistics for the intervening months, October-December 1950, are given in DBS report, *Statistics of Criminal and Other Offences*. Figures for 1900-42 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

Year	N'f'ld.	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Yukon	N.W.T.	Canada

1949.....	..	3,118	12,617	13,131	232,132	510,837	72,023	16,465	25,551	94,326	232	57	980,489
1950.....	..	2,095	13,137	21,732	280,868	617,565	79,079	22,717	28,344	117,729	553	172	1,183,991
1951.....	5,022	2,195	14,850	25,660	267,648	671,893	118,217	22,467	39,956	139,304	950	304	1,308,466
1952.....	6,191	2,578	14,977	31,905	312,892	819,253	135,034	31,618	50,443	158,967	1,342	507	1,565,707

In considering statistics of summary convictions, it should be remembered that such convictions are greatly influenced by the customs of the people and by the application and degree of enforcement of municipal regulations. These differ from place to place and from year to year and affect non-indictable offences more than they do indictable crimes.

In 1952 marked increases appeared in offences against the Merchant Seamen's Act, the Immigration Act, the Weights and Measures Act and the Income Tax Act. Misdemeanours against public health, revenue laws and public morals also increased. Offsetting these increases were decided decreases in convictions for offences against the Excise Act (35·8 p.c.), the Wartime Prices and Trade Board Act (35·3 p.c.) which should decline yearly, gambling Acts (26·5 p.c.), provincial Acts (22·5 p.c.).

16.—Convictions for Non-indictable Offences, by Type, Years Ended Sept. 30, 1948-50, and Dec. 31, 1951-52

---

[1] Includes Excise and Income Tax Acts.

Breaches of Traffic Regulations.—Each year breaches of traffic regulations constitute a greater proportion of the total convictions for non-indictable offences. In 1952 they amounted to 83·7 p.c., an increase of 23·1 p.c. over 1951, which alone would account for the increase in summary convictions; 98·7 p.c. of them were offences under provincial highway traffic Acts and municipal by-laws.

17.—Convictions for Breaches of Traffic Regulations, by Province, Years Ended Sept. 30, 1943-50, and Dec. 31, 1951-52

Note.—*See* headnote to Table **15**, p. 309.

For the year 1952, Ontario, with 40·9 p.c. of the registrations of motor-vehicles in Canada, had 54·5 p.c. of the total convictions for breaches of traffic regulations; Quebec in the same year had 18·2 p.c. of the motor-vehicles and 20·4 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. These two provinces have large urban centres, but in provinces with lower degrees of urbanization, such as the Atlantic Provinces, Saskatchewan and Alberta, convictions are lower when considered in proportion to the number of motor-vehicles registered.

Convictions for Drunkenness and Offences against the Liquor Acts.—In considering these convictions, it should be noted that the same person may and often does appear before the courts on such charges more than once within a year and that the number of convictions may thus be well above the number of persons convicted.

18.—Convictions for Drunkenness, by Province, Years Ended Sept. 30, 1943-50, and Dec. 31, 1951-52

Note.—*See* headnote to Table **15**, p. 309.

There is general interest in the relation of alcoholism to crime but, when examining statistics to support the assumption that some crimes are associated with the consumption of liquor, it should be observed that accurate interpretation would necessitate allowance for population variables such as age and sex distribution and other classifications according to social and economic status, etc.

Convictions of Females.—The number of convictions against females for non-indictable offences has increased steadily each year since 1944. The increase in 1952 over 1951 amounted to 20·0 p.c., Manitoba, the Yukon and Northwest Territories, Newfoundland, Nova Scotia and Prince Edward Island recording the highest percentages at 257·8, 166·6, 50·0, 45·4, and 42·5, respectively. Only two provinces, Quebec and Saskatchewan, recorded decreases.

Traffic offences for which women were responsible increased in 1952 over 1951 by 23·8 p.c. and caused 85·3 p.c. of the summary convictions against women.

20.—Convictions of Females for Non-indictable Offences, by Province, Years Ended Sept. 30, 1948-50, and Dec. 31, 1951-52

Note.—*See* headnote to Table **15**, p. 309.

Section 3.—Juvenile Delinquents

The Juvenile Delinquents Act defines a child as "any boy or girl apparently or actually under the age of 16 years". Provision is made, however, by which the Governor General in Council may proclaim that in a province the definition of a child be a "person under the age of 18 years". This has been done in British Columbia, Manitoba and Quebec. In Alberta the age of juvenile boys is "under 16 years".

Newfoundland considers a juvenile to be a girl or a boy of under 17 years of age. For uniformity, the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer to the younger ages of under 16 years only and deal primarily with cases disposed of by the courts.

The fact that juvenile court statistics furnish the most comprehensive figures collected on a country-wide basis makes it important that their possibilities and limitations be understood. This Section gives an account of juvenile delinquency in Canada from the viewpoint of legal action taken, for in the eyes of the law a *child is a delinquent only when he or she is adjudged before the court to have committed a delinquency.* To many people the term 'juvenile delinquent' has a broader interpretation but that adopted in this Section does not include those boys and girls whose misdemeanours have not been reported to the courts or who have been given the necessary advice and aid from their parents, their school, the police or a child-care agency. Moreover, it does not include those cases that are handled unofficially by the court, where the judge or probation officer makes an adjustment without filing a legal record of the offence. The tendency to follow this practice and thus keep children's names from court records is growing and may account to some extent for the decreasing number of recorded court cases.

These statistics represent cases of delinquency reported to the courts, from the most trivial infractions to the most serious, that of murder. The number of cases brought before the courts is influenced by such factors as personnel and facilities of the court, community interest in and understanding of the function of a juvenile court, and by variations in the policies of the courts in the disposition of cases. As more courts are established, the additional returns may exaggerate an apparent increase in delinquency or may underestimate a decrease. In some communities, the juvenile court is the only available agency to provide services to children; in others, there are well-established agencies serving children, of which the juvenile court is only one.

It should be noted, too, that the total figures do not represent the actual number of children charged and found guilty, but rather tend to exaggerate them, for a child referred to the court two or more times during the year for different offences is counted as a different case each time. Neither do the figures represent the number of offences committed by offenders, as, when a child is charged with more than one delinquency at a hearing, only the most serious offence is counted.

Reports of juvenile delinquents were received in 1952 from 151 of the 156 judicial districts. Eighteen of these had no cases to report. Separate reports were received in 1952 from 155 incorporated urban centres of 4,000 population or more.

Juveniles Before the Courts.—The number of cases of juveniles brought before the courts has declined almost steadily each year since 1943. The only break in the trend was in 1950 and 1951. In the latter year a large part of the increase was accounted for by the addition of 194 cases in Newfoundland.

22.—Juveniles brought before the Courts, by Province, 1948-52

NOTE.—Statistics for years before 1950 are for the 12 months ended Sept. 30; figures for 1950-52 are for the calendar year. Statistics for the three intervening months, October-December 1949, are given in DBS report *Juvenile Delinquents, 1950.* Figures for Newfoundland are included for the first time in 1951.

1952	− 5·0	+ 4·5	− 4·1	−47·8	−47·1	−47·7

Children Adjudged Delinquent.—Between 80 and 90 p.c. of the children brought before the courts each year from 1943 to 1952 were adjudged delinquent. As the number brought before the courts has declined steadily during the ten-year period, with the exception of the years 1950 and 1951, so the number of delinquents has followed a like trend. The major decreases in 1952 as compared with 1951 were shown in Quebec and Ontario.

24.—Juvenile Delinquents, by Province, 1943-52

Offences.—Thieving is the most prevalent delinquency among boys and, together with receiving stolen goods, was the reason for court appearance in nearly half (48·5 p.c.) of the cases in 1952. Burglaries, robberies, house- and shop-breaking were committed by 26·4 p.c. of them and another 11·3 p.c. committed wilful acts against property. Only 3·0 p.c. of the boys were guilty of offences against the person and 36·2 p.c. of these were charged with common assault.

Incorrigibility (26·0 p.c.) and thefts (25·5 p.c.) were the complaints against more than half of the delinquent girls in 1952.

Sex and Age.—Juvenile delinquents are predominantly boys. The ratio between boys and girls has remained much the same over a long period and for all offences in 1952 it was approximately one girl to eight boys. Juveniles of 13 to 15 years of age comprised the majority of delinquents, 68·9 p.c. in the case of boys and 85·1 p.c. in the case of girls. However, 299 boys and 14 girls (5·2 p.c. of the children) were under 10 years of age. There were no delinquent girls before the courts in Prince Edward Island; none under 14 years was judged to be delinquent in Saskatchewan and none under 11 years in Quebec and Manitoba.

27.—Percentages of Delinquent Boys and Girls, by Age Group, 1951 and 1952

NOTE.—*See* headnote to Table 22, p. 314.

Totals	**100·0**	**100·0**	**100·0**	**100·0**	**100·0**	**100·0**

Education and Employment.—Many causes contribute to backwardness in school work. The retarding influence may be illness, over-crowding in the home, disturbed family situations or dull mentality. Presuming that six years is the usual age for entering Grade I, nearly half of the juvenile delinquents (44·9 p.c. of the boys and 44·8 p.c. of the girls) in 1952 were reported to be two or more years below the normal grade for their age and 3·8 p.c. of the boys and girls were a year or more above it.

Well over half of the boys had attained Grade VI and more than half of the girls Grade VII at the time of the delinquency. The majority of boys who had left school had reached Grades VI to VIII and the girls, Grades VII to IX. Some high school education had been achieved by 17 p.c. of the boys and girls.

In 1952, 10·4 p.c. of the delinquent boys and 18·5 p.c. of the delinquent girls were not attending school. At the time of leaving school their ages ranged from 7 to 15 years, the majority being between 14 and 15. Nearly 28 p.c. of the delinquent boys were unemployed. The largest group of wage-earners (67) were recorded as day labourers. The next largest group (52) were in occupations concerned with transportation, such as messengers, helpers on milk-delivery routes, truck drivers' assistants, etc. More than a third of the girls were idle after leaving school. Factory work, domestic and personal service were the main occupations of those who were employed.

Birthplaces of Juvenile Delinquents and their Parents.—Canada was the country of birth of 96·2 p.c. of the juvenile delinquents in 1952 (the place of birth was not recorded in 1·6 p.c. of the cases). One hundred and thirty-one (2·2 p.c.) were born in the British Isles, Europe, the United States and China. Ontario was the province of residence of 64·1 p.c. of those born outside Canada.

Both parents of 72·1 p.c. of the delinquent children in 1952 were born in Canada and another 13·9 p.c. had one parent born in this country. To evaluate these figures, comparison should be made of population ratio of children from 7-15 years of age whose parents were Canadian-born with those whose parents were born elsewhere.

Home Circumstances.—The type of home in which he lives and the amount and quality of supervision he receives are important factors in a child's behaviour. The statistics of the marital status of the parents and the place and type of residence of the child reflect home conditions and are worth recording as possible reasons for social or emotional maladjustment. The parents of 77·4 p.c. of the delinquent children were reported to be living together in 1952. Homes broken by separated parents, divorce or death was the background from which 19·0 p.c. of these boys and girls came. The mothers of 9·9 p.c. of the juvenile delinquents were employed other than in the home and, in the cases of another 2·9 p.c., the mothers were dead. The fathers of 6·0 p.c. of the cases were deceased. For every four juveniles who appeared in court, three resided in an urban centre and one in a rural district. Of these boys and girls, 89 p.c. were living in their own homes at the time they got into difficulties; 4·7 p.c. of them were in foster homes, either with a relative or some other person, and institutions were the homes of 1·7 p.c. of them.

Sources of Complaint.—The police were the complainants in the majority of juvenile cases, 79 p.c. of the boys having been so charged. Probation officers and parents were each responsible for 2·3 p.c. of those charged. School authorities referred 1·9 p.c. of the boys to the courts, and social agencies another 1·0 p.c.

The proportion (52·1 p.c.) of girls charged by the police was considerably less than the proportion of boys. Parents made more use of the courts for girls than for boys (16·4 p.c.). School authorities laid complaints in 5·7 p.c., probation officers in 6·6 p.c. and social agencies in 7·5 p.c. of the girls' cases.

Repeaters.—In 1952, approximately one in every three children brought before the courts failed to heed the first warning and made at least a second appearance. In 1952, 72·7 p.c. of the delinquent children appeared before the courts for the first time, 15·9 p.c. were second offenders, 6·0 p.c. third, while 5·4 p.c. were dealt with by the courts four or more times.

1952[1]	6,068	4,412	963	367	155	171	1,656	27·3

[1] Includes minor offences.

Disposition of Cases.—In 1952, not quite one-half of the children's cases (48·2 p.c.) were heard within four days of the charge and slightly over two-thirds (68·6 p.c.) within nine days. However, 19·1 p.c. of them had to wait at least two weeks and 8·5 p.c. waited a month or more before the first hearing. These waiting periods may be explained in various ways.

Some county courts sit only twice or even once a month. Hearings may be deferred because of sickness in the family, school examinations, stormy weather, or long distances. The chief cause for delay, however, is the time it takes to investigate the facts properly. The probation officer, and frequently there is only one to a court, has to find out what occurred at the time of the delinquency; he must contact the parents and the school, learn something of the home situation, perhaps arrange medical or psychiatric examinations and explore community resources. The disadvantage of a long waiting period is outweighed by the assistance the court receives in deciding the form of treatment best suited to the child's needs and the type of care that will be the most economical for the community. For these intervening days or weeks most children are left in their own homes while a minority are placed in detention homes and, in the long run, whether the effect of the waiting period is good or bad is determined by the care given the youngster during that time.

Juvenile court judges heard 93·1 p.c. and magistrates 6·8 p.c. of the juvenile cases before the courts. The balance were heard by justices of the peace. The proportion of those declared delinquent (97·6 p.c.) in the magistrate's courts was greater than in the juvenile courts (83·2 p.c.). In the former court 2·4 p.c. of the cases were dismissed while in the juvenile courts only 2·5 p.c. were dismissed but 14·3 p.c. were adjourned *sine die.*

Some courts consider children whose hearings are adjourned *sine die* as delinquent while others do not but, for the sake of uniformity in this report, the latter point of view is maintained by the Dominion Bureau of Statistics. In assessing the total problem of juvenile delinquency, however, cases adjourned *sine die* have to be taken into account for, when the proportion of cases dealt with in this way increases, the proportion of those declared delinquent declines.

30.—Juveniles before the Courts, Dismissed and Delinquent, 1948-52

NOTE.—*See* headnote to Table 22, p. 314.

Item	1948		1949		1950		1951		1952	
	No.	p.c.	No.	p.c.	No.	p.c.	No.	p.c.	No.	p.c.
Before the courts	7,878	100·0	7,038	100·0	7,304	100·0	7,521	100·0	7,211	100·0
Dismissed	190	2·4	166	2·4	197	2·7	195	2·6	176	2·5
Adjourned *sine die*	533	6·8	674	9·6	689	9·4	682	9·1	967	13·4
Delinquent	7,155	90·8	6,198	88·0	6,418	87·9	6,644	88·3	6,068	84·1

The disposition of cases in 1952 differed between boys and girls. The proportion of those put on probation was 41·9 p.c. for the boys and 44·5 p.c. for the girls. Fines or restitution were meted out to 18·1 p.c. of the boys but to only 5·5 p.c. of the girls. This is because damage to property, for which restitution seems a reasonable adjustment, is committed relatively more often by boys than by girls. A much larger proportion of girls (38·3 p.c.) than boys (16·6 p.c.) were sent to training schools. Final disposition of case was postponed in 7·2 p.c. of the girls' cases while 19·3 p.c. of the boys were given suspended sentences. Corporal punishment was resorted to in only two cases.

Section 4.—Police Forces

The Police Forces operating in Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police whose operations cover a very wide field in addition to purely police work; (2) Provincial Police Forces—the Provinces of Ontario and Quebec have organized their own Provincial Forces, but the other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their boundaries; (3) Municipal Police—every city of reasonable size has its own police organization which is paid for by the local taxpayers and which attends to police matters within the borders of the municipality concerned.

Subsection 1.—The Royal Canadian Mounted Police*

The Royal Canadian Mounted Police is a Civil Force maintained by the Federal Government. Organized in 1873 as the North West Mounted Police, its duties were confined to what was then known as the North West Territories. By 1904, the work of the Force received signal recognition when the prefix "Royal" was bestowed upon it by King Edward VII. In 1905, when Alberta and Saskatchewan were constituted Provinces, an arrangement was made whereby the Force continued to discharge its duties as formerly, each Province making a contribution towards defraying the cost. This arrangement was continued until 1917.

In 1918, the Royal North West Mounted Police was assigned the duty of enforcing Dominion legislation for the whole of Canada west of Port Arthur and Fort William. Soon after the end of World War I an extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and, therefore, the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year, the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., was absorbed by the Royal Canadian Mounted Police.

Organization.—The Force is controlled and administered by a Minister of the Crown (the Minister of Justice). Its Commissioner has the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from serving non-commissioned officers. The Force is divided into 17 Divisions, including the Marine Division with Headquarters at Halifax, N.S. There are 627 detachments distributed over the entire country. Its land force transportation consists of 1,293 motor-vehicles, most of which are fitted with two-way radio sets connecting with wireless stations operated by the Force. Such stations operate in both Western and Eastern Canada, including the Quebec-United States boundary area. The "Air" Division of the Force operates ten aircraft of various types. The strength of the Force is approximately 4,445 officers and men, with a reserve strength of about 291. The reserve strength is located chiefly in the larger cities where men can be congregated easily and where instruction can be given in the evenings.

The Marine Division has a strength of about 200 officers and men and operates 26 ships of various kinds, the majority of which are located on the Atlantic and Pacific Coasts and on the Great Lakes. The RCMP schooner *St. Roch,* which has been used as a floating detachment in the Far North and as a supply ship to isolated detachments, was the first ship to navigate the Northwest Passage from east to west and from west to east and is also the first vessel to have circumnavigated the North American Continent.

The Personnel Branch of the RCMP has officers in each Division across the country. Great care is taken in the selection of recruits.

Duties.—The Royal Canadian Mounted Police is responsible for enforcing federal laws throughout Canada and is specially empowered to deal with infractions against smuggling by sea, land and air. It also enforces the provisions of the Excise Act, and is responsible for the suppression of traffic in narcotic drugs. In all, the

---

* Revised by Commissioner L. H. Nicholson, M.B.E., Royal Canadian Mounted Police, Ottawa.

Force has responsibility in over 50 Federal Government Acts, including the Indian Act. It also assists many departments of the Federal Government in administrative duties and is responsible for the protection of government buildings and property. It is the sole police force operating in the Northwest and Yukon Territories. Furthermore, it undertakes secret and security services for the Federal Government. In addition to its federal duties, agreements have been made with the Provinces of Alberta, Saskatchewan, Manitoba, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland and British Columbia whereby the services of the Royal Canadian Mounted Police can be secured to enforce provincial laws and the Criminal Code in rural districts upon payment for such services. The agreement with Saskatchewan has been in existence for 26 years and those with the Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island for 22 years. The agreements were entered into with the Provinces of Newfoundland and British Columbia in August 1950, and the police forces of those Provinces were absorbed by the Royal Canadian Mounted Police. The Force has agreements also for policing more than 123 urban centres within the provinces mentioned.

Other Services.—The services of RCMP experts in fingerprints, crime-index information, examination of firearms and questioned documents are available to all other police forces in Canada. A *Police Gazette,* issued monthly and containing instructional articles on police work as well as the latest information on wanted or missing persons, is sent to all police forces across the country. The RCMP has two Police Colleges that are open to selected personnel from other police forces in Canada and to a more limited number of those outside its boundaries.

In recent years the Force has given special attention to crime prevention, as well as detection, and has done much to assist young people in those provinces where the Force acts as the provincial police in developing a healthy outlook towards the police, law, order and responsible citizenship.

A book entitled *Law and Order in Canadian Democracy,* containing twenty essays, has been issued by the Force and is available through the Queen's Printer, Ottawa.

Subsection 2.—Provincial Police Forces*

Quebec Provincial Police Force.—The Quebec Provincial Police Force is responsible for upholding law and order over the whole territory of the Province, from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence. The Force, composed of about 800 men, is in charge of a Director, who acts under direct orders from and is responsible to the Attorney-General of the Province.

To facilitate operations, the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office at Montreal and an Assistant Director at the city of Quebec. Working under these Directors are two Deputies and an Inspector General. In each District the Police Force is divided into three sections: the detective corps, the constabulary and the traffic officers; each section is in charge of a captain supported by a number of lieutenants and sergeants.

---

* Revised by Geo. A. Shea, O.B.E., Secretary-Treasurer, Chief Constables' Association of Canada, Montreal, Que.

A province-wide frequency modulation radio-communication system has been established at Montreal. A main station, operating on the top of Mount Royal, directs radio-equipped cars within a radius of between 60 and 80 miles around Montreal, and similar stations operating from the cities of Quebec and Three Rivers direct the mobile units operating in their respective areas. Substations operate at each of the eight bridges giving access to or exit from the city of Montreal and a number of cars, all equipped with frequency modulation three-way radio units, patrol the surrounding country day and night.

Ontario Provincial Police.—The Ontario Provincial Police is maintained by the Ontario Government under the Attorney-General's Department. The Force is responsible for law enforcement in the rural and unorganized parts of the Province and in certain municipalities by contract.

The development of the Force from its beginning in the early years of Confederation to the passing of the Police Act in 1946, is outlined in the 1950 Year Book, pp. 332-333.

The Force, with a strength of approximately 1,453 in 1953, consists of a General Headquarters at Toronto and 16 districts with Headquarters at Chatham, London, Dundas, Niagara Falls, Newmarket, Mount Forest, Barrie, Peterborough, Belleville, Perth, Cornwall, Haileybury, Sudbury, Timmins, Port Arthur and Kenora. Each district has detachments adequate to meet law enforcement requirements. A Criminal Investigation Branch, under the command of a Chief Inspector, is maintained at Toronto to handle crimes of a major nature.

The installation of one of the largest police frequency-modulation radio systems in the world has placed at the command of the police a most efficient method of combating every type of lawlessness. There are in operation 56 fixed stations, together with 437 two-way radio cruisers and three cabin cruisers, one on Lake Temagami, one on Lake Simcoe and one on Georgian Bay. The 250-watt station at each District Headquarters is open 24 hours daily and many of the cars are on continuous round-the-clock patrols.

Up to December 1953, 90 municipalities had availed themselves of the provisions of the Police Act for the policing of their municipalities by the Ontario Provincial Police.

Subsection 3.—Municipal Police Statistics

Police statistics were submitted for the year 1952 by Chiefs of Police in 243 urban centres, 13 district communities, 13 townships and one unorganized district, all of 4,000 population or over.

Criminologists generally agree that the number of offences known to the police is the closest indication of the volume and nature of crime in a country. The number of offences reported as known to the police was 24·5 p.c. higher in 1952 than in the previous year. Of these known offences, 51·9 p.c. were cleared by arrest.

Of the total prosecutions, 5·9 p.c. were for crimes under the Criminal Code and federal statutes, 21·1 p.c. were for offences under provincial statutes; and 73 p.c. were for municipal by-law infractions. Traffic offences accounted for 87·8 p.c. of the prosecutions.

Section 5.—Penal Institutions and Training Schools

Penal institutions may be classified under three headings: (1) penitentiaries, where prisoners have long sentences and the turnover is slow; (2) reformatories, where the turnover is also rather slow; and (3) common gaols, where the turnover is extremely rapid.

If the average of the figures for inmates at the beginning and at the end of the year be considered the average population for the year, and the number of discharged as the turnover, the turnover in the years 1951 and 1952 was: in penitentiaries, 47 and 49 p.c.; in reformatories, 296 and 305 p.c.; and in gaols, no less than 1,549 and 1,589 p.c., respectively.

In considering these figures it should be borne in mind that the common gaol population changes from day to day and is made up partly of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

[1] In 1950, Newfoundland Penitentiary reported for the first time and Oakalla Prison Farm, B.C., previously classed as a reformatory for men, was changed to a gaol.

[2] In 1952, the Bowden Institution, Innisfail, Alta., and Young Offenders' Unit, South Burnaby, B.C., reported for the first time.

Subsection 1.—Penitentiaries*

The Penitentiaries Branch of the Department of Justice is charged with the administration of the various penitentiaries of Canada. Eight institutions are included in the system, the two largest being at Kingston, Ont., and St. Vincent de Paul, Que. Others are at Dorchester, N.B., Prince Albert, Sask., Stony Mountain, Man., New Westminster, B.C., Collin's Bay, Ont., and St. John's, N'f'ld.; the latter is operated under provincial authority and the figures for inmates of that institution serving sentences of two years or more are included for 1950-53 in Tables **34** and **35**. A Federal Training Centre was opened at St. Vincent de Paul in April 1952 for the treatment and training of offenders under 25 years of age. A Penitentiary Staff College was also set up at Kingston for the training of penitentiary officers through courses of instruction and training conferences. During the year ended Mar. 31, 1953, the average daily population of the penitentiaries was 4,708 and the total net cash outlay for maintenance for the year was $7,364,148 or $4.28 per inmate per day.

Females given penitentiary sentences in the various provinces are sent to the Prison for Women at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision; inmates in custody on Mar. 31, 1953, numbered 105.

---

The Ticket-of-Leave System.—The parole system in Canada is legalized under the Ticket-of-Leave Act (R.S.C. 1952, c. 264) and is administered by the Minister of Justice. It is described in detail in the 1948-49 Year Book, pp. 305-308.

Subsection 2.—Reformatories and Other Corrective Institutions

A census of reformatories and of training schools is taken at five-year intervals, the latest being June 1, 1951. At that date, there were 13 reformative and corrective institutions, four of which were for women. Enumeration cards were completed for 2,551 men and 141 women on June 1, 1951. In these institutions for adults 29 p.c. of the inmates were under 21 years of age at the time of admission and almost 50 p.c. were between the ages of 21 and 39 years. The proportion of single men was 63 p.c. and three out of four of the men whose residence was known lived in urban centres. More than one-half of the women (53·2 p.c.) were single and the majority (91·0 p.c.) of those whose residence was known lived in urban centres. From five to eight years of elementary school education were recorded for about one-half of the male and female inmates. Only 6·7 p.c. of the men were unemployed at the time of admission. On the other hand, 20·6 p.c. of the women were unemployed and another 34·0 p.c. had never worked.

The revenue for the support of the institutions for men was derived chiefly from provincial funds (56·0 p.c.) and from the sale by the institutions of farm and industrial products (41·3 p.c.). In the case of the institutions for women, income was received from provincial funds (31·0 p.c.), municipalities (1·8 p.c.), sale of products (53·4 p.c.), donations and bequests (4·6 p.c.) and other sources (9·2 p.c.).

Summary statistics of inmates, movement of population, terms of sentence and penal record of inmates are given in the 1954 Canada Year Book, pp. 311-313.

Subsection 3.—Training Schools

Reports on movement of population are received yearly from training schools and figures compiled therefrom are shown in Table 36 for the years 1948 to 1952.

36.—Movement of Population in Training Schools, Years Ended Mar. 31, 1948-52

[1] In 1952, Boscoville Training School for Boys, Rivière-des-Prairies, Que., reported for the first time.

The period of the financial year varied among the training schools. The last complete financial year before June 1, 1951, showed that the province concerned supplied about three-quarters of the funds for the support of such schools (77·2 p.c. for boys' schools and 70·6 p.c. for girls' schools) and the municipalities a little more than a tenth (12·5 p.c. for boys' schools, 10·2 p.c. for girls' schools). Other financial resources included fees paid by parents, donations, bequests, sale of farm and industrial products and laundry work. Nine of the schools for boys were provincially administered, five were administered by religious orders and one by a board of directors; eight of the schools for girls were administered by religious orders and four were under provincial authority.

Statistics of training schools compiled from Census of 1951 returns are summarized in the 1954 Canada Year Book, pp. 314-316.

PART I.—FORMAL EDUCATION*

Section 1.—Education in the Provinces

Education in Canada is generally the responsibility of the provinces.† Each province has its own system, that of Quebec being a dual one. However, there are two clearly defined types: (1) the English tradition carried on in nine provinces and in the Protestant schools of Quebec and (2) the French tradition followed in the Roman Catholic schools of Quebec.

The English Tradition.—The system of education in each province is established by legislation and administered by a Department of the Provincial Government under a Minister of Education who is a member of the Cabinet and is responsible to the Legislature.

Each of the Atlantic Provinces has a Council of Public Instruction or Board of Education, an advisory group composed of the Premier, Minister of Education, Deputy Minister or Superintendent and certain other appointees. The Council in Newfoundland is made up of the Minister, the Deputy Minister and the Superintendent of Education of each of the four leading religious denominations.

Each Department of Education is concerned with the general administration of the public schools, the conduct of examinations, the certification of teachers, the registration of private schools and trade schools, public and travelling libraries, correspondence courses and also the direct management and control of teacher-training schools, vocational institutes and schools for the blind and the deaf.

---

* Except where otherwise indicated, this Part has been prepared in the Education Division, Dominion Bureau of Statistics.

† The education of Indian children on reserves is under the jurisdiction of the Federal Government. *See* p. 158 and p. 335.

Direct control and operation of the public schools is in the hands of local boards of school trustees, usually elected for terms of two or three years. They employ the teachers and administer the revenues received from provincial grants, local taxation and other minor sources. Any fees charged are for secondary education and are merely nominal, except in Newfoundland where they take the place of taxation.

Larger units of administration exist in all provinces except in Newfoundland and for the Roman Catholic schools of Quebec, though in most provinces the local boards within the units remain with limited powers. In some provinces an official trustee (or trustees), often the school inspector, may be appointed to act in school sections where a board cannot be obtained. Table **1** gives figures of local administrative units.

1.—Active School Boards and Official Trustees, by Province, 1952

[1] Included with independent local boards.

Elementary and secondary education extends over 12 or 13 years or grades, depending on the province. The elementary grades terminate with Grade VIII and the secondary grades begin with Grade IX though there is a practical as well as a theoretical separation into three divisions—Primary (Grades I to VI), Intermediate (Grades VII to X), and Senior (Grades XI to XII or XIII). The elementary schools are known as public schools, the secondary schools as high schools. However, many public schools teach some secondary grades and in Prince Edward Island and Newfoundland all grades are taught in the public schools.

In the cities and in some smaller centres there are kindergarten classes for five-year-olds and a few for four-year-olds as part of elementary education. Most children begin Grade I at age six or early seven and many complete the eight grades in seven years. Attendance is compulsory from age seven or eight to age 14 with attendance to age 16 required of urban pupils in some provinces. Emphasis is on the fundamental subjects—reading, writing, arithmetic, health and social studies—with varying additions of science, arts and crafts, music, home economics and shopwork. Many pupils, particularly in rural areas, leave school at the end of elementary schooling and enter employment in agriculture or unskilled occupations.

Secondary education may extend over a period of four or five years. Courses and subjects of study are diversified. A student may choose the academic course leading to university entrance or select courses or subjects preparing for employment in agriculture, commerce or industry. A student may pass from secondary school into commerce or industry at any time during this period provided he or she is beyond the age of compulsory school attendance.

Further education is available to the high-school graduate through teacher-training courses of one or two years for elementary school teachers; specialized technical training extending up to two years in a technical institute—there is at least one such institute in almost every province; nurse-training school where training extends over three years; or university. University courses are available in arts, commerce, science, education, philosophy, medicine, theology, etc. Graduation with a first degree (B.A., B.Sc., etc.) requires three to four years, medicine requires six years and theology seven years. Post-graduate courses require another two or more years.

The French Tradition.—The Quebec Department of Public Instruction is represented in the Cabinet by the Provincial Secretary. Although the Superintendent of Public Instruction is the head of the Department, a Roman Catholic Committee and a Protestant Committee, in charge of the education of Roman Catholics and Protestants, respectively, constitute the Council of Education which formulates policy and superintends the administration of all educational matters. The Council, however, has no authority over many special and technical schools that come directly under various government departments. The Protestant schools follow the English tradition already described; the Roman Catholic schools follow the French tradition.

From the very beginning boys are separated from girls. Both sexes follow through the Primary Grades, I to VII. The girls may then take the Complementary Grades, VIII and IX, and thence enter a regional household science school, begin a four-year course in teacher-training school or enter a superior school where a two-year course leads to a school of fine arts, a commercial course or a nurse-training course.

At the end of the sixth year a boy may enter a classical college for an eight-year course ending with a baccalaureate degree, which is prerequisite for entrance to a professional course in university, or he may continue on to the end of the primary course and then spend two years in the complementary course. From this point he may enter a technical school or any one of four sections of the two-year superior course—commercial, scientific, agriculture, technical or pre-teacher-training school. The latter leads to entrance to a teacher-training school, the others lead to specialized schools and advanced courses in technical schools or, after another year of preparatory work, to the higher schools of applied science, commerce and agriculture affiliated with the universities.

The boy who neither enters the classical college nor goes on to the complementary course may go directly from the primary course to a trade school or one of the regional agriculture schools. These schools offer two-year terminal courses.

Section 2.—Education in the Territories*

Northwest Territories.—Education in the Northwest Territories is carried on under authority of the Northwest Territories Act, the School Ordinance and the Regulations thereunder, and the Indian Act and the Regulations thereunder. Day schools for non-Indian children are operated by the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources at Fort Smith, Hay River, Fort Resolution and Fort Simpson where the inhabitants are predominantly of white and of mixed blood. Day schools for the education of Eskimos are also operated by that Branch at Aklavik, Tuktoyaktuk, Coppermine, Chesterfield Inlet, Cape Dorset and Coral Harbour in the Northwest Territories, and at Fort Chimo and Port Harrison in the Province of Quebec.

The Roman Catholic Church operates residential schools at Aklavik, Fort Providence and Fort Resolution, and mission day schools at Fort Simpson and Fort Smith; the Church of England operates a residential school at Aklavik. The mission authorities of these churches and other mission organizations also conduct schools for Eskimos at a number of points in the eastern, central and western Arctic and in northern Quebec. Eldorado Mining and Refining Limited at Port Radium and the Discovery Yellowknife Mine in the Mackenzie District also operate day schools.

The only organized school districts are the Yellowknife Public School District No. 1 and the Yellowknife Roman Catholic Separate School District No. 2. The Public School District, established in 1939, operates a modern eleven-classroom elementary and high school which was opened in 1947. The Separate School District was established in 1951 and operates a four-classroom school.

A Superintendent of Schools, with headquarters at Fort Smith, periodically inspects the schools of the Mackenzie District. These schools follow the program of studies for elementary and secondary schools authorized by the Alberta Department of Education. In remote areas, elementary and high school students have access to correspondence-course studies issued by the educational authorities of Alberta and the cost is borne by the Territorial Administration. An inspection of all school facilities for Eskimo children in the Canadian Arctic is made annually by an Education Officer from Ottawa.

A modified elementary school curriculum is followed by some of the federal schools for Eskimos by way of meeting the unique needs in the Arctic regions, and a suitable curriculum for teaching Eskimo children in mission schools is being considered. Because of their nomadic way of life, Eskimos seldom remain long at the settlements and the periods available to the missions for teaching the children are comparatively short. The Eskimos of the Eastern Arctic have long had a system of syllabic writing (expressed as geometric phonetic characters) which most of them can read and write proficiently. Syllabic writing has been used successfully to provide educational material in the Eskimo language on health matters, hygiene and native economics for the benefit of both children and adults. It is hoped that the establishment of schools in Eskimo territory will be influential in teaching the Eskimos to understand, speak and read simple English.

---

* Prepared in the Department of Northern Affairs and National Resources, Ottawa.

A program designed to improve education and welfare facilities generally has been initiated in the Northwest Territories. The program now includes regular distribution of educational films, special radio broadcasts to classrooms, the provision of additional equipment and supplies, and increased attention to methods of instruction. Schools are usually staffed by a particular classification of welfare teachers who carry on welfare work in the communities in addition to regular teaching duties.

Yukon Territory.—Public schools in the Yukon Territory are operated by the Territorial Government at Dawson, Mayo, Whitehorse, Carcross, Teslin, Watson Lake, Haines Junction, Kluane Lake, Brook's Brook, Swift River and Elsa. The Whitehorse school has three kindergarten departments. Roman Catholic Mission authorities maintain a school at Whitehorse and one at Dawson.

The schools in the Territory follow the program of studies of the British Columbia Department of Education. The public schools at Dawson and Whitehorse have high school departments providing education leading to university entrance. The university entrance (junior matriculation) examinations are held in June at Dawson and Whitehorse by authority of the Department of Education of the Province of British Columbia. Examination papers are forwarded from Victoria and are returned there for grading. In outlying districts, correspondence courses are provided at a nominal fee by arrangement with the British Columbia Department of Education.

Educational matters in the Yukon Territory are in charge of a Superintendent of Schools, resident at Whitehorse, who is responsible to the Commissioner (*see* p. 86). Inspections of all schools are made periodically by the Superintendent.

The education of Indian children is carried on in day schools operated by the Indian Affairs Branch of the Department of Citizenship and Immigration and in residential schools operated by religious denominations. Full-time day schools are maintained at Whitehorse, Carmacks, Mayo, Moosehide and Old Crow. Seasonal schools are conducted by the denominational workers at Ross River and elsewhere as opportunity arises. At Carcross there is a residential school operated under the auspices of the Church of England in Canada; a new building has been erected and was opened in September 1954. The Baptist church conducts a hostel at Whitehorse where Indian pupils are maintained at the expense of the Federal Government. These pupils attend the Whitehorse Indian School. Indian pupils of Roman Catholic affiliation attend the Indian residential school operated under Roman Catholic auspices at Lower Post, B.C., which is located close to the southern boundary of Yukon Territory. Residential schools in Yukon Territory receive a per capita grant for Indian children registered therein.

Section 3.—Statistics of Schools, Universities and Colleges

Educational institutions in Canada are classified into four types: provincially controlled schools, privately controlled schools, universities and colleges, and federal schools in the Territories and for Indians. The first three types are dealt with in this Section, while information on Indian schools, with the exception of enrolment figures shown in Table 2, is included with the general material on the Indians of Canada given in the Population Chapter, p. 158.

2.—Enrolment in Educational Institutions, classified by Type of School and by Province, School Year 1951-52

Type of School	Newfoundland	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario

Indian schools and schools in the Territories	3,437	3,493	3,195	5,316	3,235	28,045
Totals	**169,988**[3]	**190,483**	**206,471**	**231,463**	**3,235**	**3,047,605**
Population (June 1, 1952 estimate)	798,000	843,000	970,000	1,198,000	25,000	14,430,000

[1] Schools for the blind and deaf; these are boarding schools and many of the pupils are from provinces other than the one in which the school is situated. [2] Courses for elementary teachers only; those for secondary teachers are included in university enrolment. [3] Estimated.

The provincially controlled schools are the most important group and account for about 90 p.c. of the total enrolment shown in Table 2. These systems of public elementary and secondary education are financed mainly by local school authorities, assisted by provincial grants. There are private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money) but their enrolment is not large in comparison with that of the public schools. At the level of higher education, there is a provincial university in each of six provinces and one or more colleges supported out of provincial funds in the other provinces. In addition, there are 16 private universities most of which receive provincial aid and 163 colleges giving degree credit courses. Universities and colleges also receive grants from the Federal Government. The number of agricultural colleges and schools, by province, with type and length of course offered, is given in the Agriculture Chapter, pp. 388-391.

Subsection 1.—Provincially Controlled Elementary and Secondary Schools*

Enrolment and Attendance.—At the elementary school level, enrolments have been increasing since the school year 1944-45. Birth registrations and immigration figures for the past few years indicate that by 1959-60 the enrolment in the elementary grades will be at least 2,900,000 and in the secondary grades at least 532,000, a total of 3,432,000 compared with 2,502,000 in 1951-52.

Factors operating to increase enrolment include: the introduction of family allowances in 1945 which, while showing its effects on schools most clearly in improved attendance, is also keeping in school to the legal age limit many pupils who might otherwise leave from a few months to two years before they are lawfully entitled to leave; increased emphasis on the holding power of schools; a changed social attitude toward secondary education; increased transportation facilities at public expense; the building of dormitories in some provinces; the larger unit of administration and the establishment of junior high schools and of composite schools to serve rural areas particularly.

Enrolment in provincially controlled schools for the latest school year available is given in Table **2** and average daily attendance is shown in Table **3**.

---

* Academic and vocational day schools only.

3.—Average Daily Attendance in Provincially Controlled Schools, by Province, School Years Ended 1943-52

NOTE.—Comparable figures for earlier years will be found in previous editions of the Year Book, beginning with the 1932 edition.

[1] Province reports lump sums only for Grades I to III and IV to VI; numbers for these individual grades are estimated. [2] Includes 350 Grade XI students and 58 Grade XII students enrolled in Prince of Wales College.

Teaching Staffs.—In 1952, the teaching staffs of provincially controlled elementary and secondary schools comprised 25,216 men and 68,731 women, a total of 93,947. Omitting Quebec for which comparable data are not available, 38 p.c. of the teachers were in cities, 31 p.c. were in towns and villages, 20 p.c. were in one-room rural schools, and the remaining 11 p.c. in schools of two or more rooms outside of urban centres. Again omitting Quebec where 36 p.c. of the teachers were members of religious orders, approximately 25 p.c. of the women teachers were married. Of the total number of teachers in the other nine provinces, at least 10 p.c. were only partially trained or were untrained; also, at least 15 p.c. of the total staff leave the profession each year.

5.—Teachers in Provincially Controlled Schools, classified according to Salary, by Province, School Year 1952-53

NOTE.—Comparable figures for Quebec are not available.

Financial Support.—The income required to support the public elementary and secondary schools is derived almost wholly from local taxation and provincial grants. Fees for elementary schooling may be charged in Quebec. In some of the other provinces fees are charged for secondary grades but, except where in lieu of taxation, they are quite nominal.

In general, school boards submit their budgets to the local municipal councils which levy for and collect the required amounts. School boards in Quebec and some boards in other provinces, moreover, have the power to levy and collect taxes for school purposes. Assessment, on which taxes for school purposes are levied, is the valuation of land and buildings (or improvements in some cases) and usually some other factor such as personal property or business income.

Each province has its own method of apportioning grants to local school boards. These grants are of two types. (1) The basic grant may be calculated on a basic minimum cost, an amount per classroom, salary and qualifications of teacher, average attendance, etc. All provinces adopt some means of increasing equality of opportunity by favouring poorer areas over richer ones. (2) Special grants are paid for such features as transportation, music, arts and crafts, special classes, equipment, building costs, night classes, etc. Special grants are largest in Quebec where there is marked emphasis on training for home industries, arts and crafts.

Newfoundland schools are financed largely from provincial funds. Tuition fees may be charged for Grades I to VIII only, except in the 'colleges' (St. John's) where fees may be charged for Grades I to XI. Fees may be charged also to provide for fuel and cleaning or these may be provided in kind. There is no local taxation for school purposes. Provincial grants are mainly for teachers' salaries, school plant maintenance and repairs, and the erection of buildings.

Table **6** presents a comparative statement of the finances of school boards operating provincially controlled schools so far as this can be done through existing records.

6.—Financial Support of Provincially Controlled Elementary and Secondary Schools, by Province, for Provincial Fiscal Years Ended 1949-51

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures, as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

[1] Net figures, after deduction of sinking funds. [2] Estimated. [3] Includes contributions to teachers' salaries and, in New Brunswick, grants made to schools by the Vocational Education Board. [4] Includes amounts raised by counties and township grants for salaries of rural public school teachers.

Subsection 2.—Private Elementary and Secondary Schools

Private schools include all those not operated by publicly elected or appointed boards. Except in Quebec, they receive no support from public funds. Instruction is similar to that given in public schools except that more opportunities may be given for music, art, etc., and in schools under religious control there is greater emphasis on religious instruction. In most provinces there is some form of inspection or regulation by the provincial Department of Education.

Of the 835 private schools reporting in 1951, 511 were in Quebec, 121 in Ontario, 126 in the Prairie Provinces, 39 in British Columbia and 38 in the Maritimes. There were 5,194 full-time teachers of whom 1,278 were men. Outside of Quebec, the salaries for lay teachers ranged from $1,000 to $5,000 with a median of $1,874 for women, and from $1,200 to $8,000 with a median of $2,700 for men.

In these schools about 65 p.c. of the pupils, including 40,000 girls and 26,000 boys, were in the elementary grades. At the secondary level there were 21,000 girls and 14,000 boys.

The private schools are financed largely from fees, legacies, gifts, or by religious organizations. Annual fees range from very little to upwards of $1,000; in 1952 they averaged $100 for day students and $500 for boarders and expenditures amounted to over $17,333,000. Of that amount, $5,313,000 was paid out in teachers' salaries.

7.—Enrolment in Private Elementary and Secondary Schools, by Province, School Years Ended 1943-52

Note.—Figures from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition. There is one small private school in Newfoundland.

[1] Exclusive of Quebec. [2] Estimated.

Business Colleges.—Of the 135 business schools reporting in 1952 in eight provinces (exclusive of Quebec and Newfoundland), 15 were in the Maritimes, 75 in Ontario, 26 in the Prairie Provinces and 19 in British Columbia. There were 121 men and 270 women employed as full-time teachers and 29 men and 78 women as part-time teachers.

The girl students far out-number the boys and the enrolment in evening classes almost equals that in the full-time day classes. The 1952 enrolment was: full-time day classes, 1,429 boys and 9,044 girls; part-time day classes, 422 boys and 2,106 girls; evening classes, 2,298 boys and 9,579 girls; correspondence courses, 168 boys and 722 girls. The total for the year was about 2,000 higher than for 1951. More than half (53 p.c.) of the students were 17 to 19 years of age.

Monthly fees ranged from $8 to $35 for day classes and from $6 to $20 for evening classes. Total operating expenditures for 1952 amounted to over $2,500,000 of which $1,085,000 was for teachers' salaries.

8.—Enrolment in Private Business and Commercial Schools (Business Colleges), by Province, School Years Ended 1943-52

Note.—Figures include day and evening classes. Those from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition. There are no schools of this type in Newfoundland.

[1] Exclusive of Quebec. [2] Estimated.

Subsection 3.—Universities and Colleges

Total registration in universities and colleges for the academic year 1951-52 is shown in Table 9. In that year the full-time enrolment of university-grade students was 63,499. In addition there were 29,227 high school and other students registered in the universities and another 63,520 taking part-time and various short courses. Thus the total enrolment in all institutions in 1951-52 was 156,246. The estimated full-time enrolment for 1952-53 at 62,800 continued the downward trend which commenced after the all-time peak of the 1947-48 session, but preliminary returns for 1953-54 indicate a reversal; the estimate for that year is about 64,200.

9.—Total Registration in Universities and Colleges, by Province, Academic Year 1951-52

The enrolment in Canadian universities of full-time students from other countries has increased considerably during the post-war years. In 1951-52 more than half of the outside enrolment came from the United States. Table **10** gives a percentage classification of the outside enrolment for selected years and also the number of Canadian students studying in the United States in the same years.

10.—Students from Other Countries in Canadian Universities and Canadian Students in the United States, Academic Years 1931-52

Year	Total Full-time Enrolment	Total Outside Enrolment	Percentage of Outside Enrolment from—				Canadian Students in U.S.A.
			U.S.A.	U.K.	B.W.I.	Other Countries	
	No.	No.					No.
1931	32,926	2,129	70·7	15·6	2·5	11·2	1,313
1936	35,108	2,443	82·6	6·4	1·3	9·7	1,075

1951	68,308	3,188	55·1	5·2	7·9	31·8	4,528
1952	63,499	3,012	50·3	4·4	8·6	36·7	4,317

Of the 63,499 full-time university-grade students in 1952, 2,813 were in receipt of allowances from the Department of Veterans Affairs.

University Graduates.—Awards made during the 1951-52 session included 13,288 bachelor and first professional degrees, 1,601 masterships and licentiates, 234 earned doctorates as well as 222 honorary doctorates (including 38 granted by Laval University on the occasion of its 100th anniversary), and 3,305 diplomas and certificates.

11.—Graduates from Universities and Colleges, Academic Years Ended 1949-52

NOTE.—Figures for 1920-36 are given in the 1938 Year Book, pp. 993-997, and for 1937-48 in the corresponding table of subsequent editions.

[1] Includes Bachelors of Letters and of Social Science. [2] Includes Bachelors of Accountancy and Secretarial Science. [3] Includes diplomas in Architecture from the Schools of Fine Arts of Montreal and Quebec. [4] Includes M. Com., M. Ed., M. Paed., M.S.W. [5] Includes M.A.Sc., M.S.A., M.Sc.F., M.Arch., M.V.Sc., M.Sc. Dent., M. Surgery (where conferred separately). [6] Except diplomas for teachers and theologians.

Academic Staff.—The total teaching staff, including part-time staff, increased from 9,441 to 10,630 between 1951 and 1952. This increase, in conjunction with the decreased enrolment, brought the ratio of teachers to staff more in line with the experience of pre-war years. By the addition of one-half of the part-time staff to the full-time staff, on the basis of equivalence in instruction, there were eight students for each teacher in the pre-war years. The 1951-52 teaching load corresponded to this figure.

12.—Teaching Complement in Universities and Colleges, Academic Years Ended 1921-52

Instructor and lecturer	2,512	3,353	3,529	3,333

Income and Expenditure.—University income figures for 1951-52, as shown in Table **13**, reflect the first payments of the Federal Government grants. Income distribution for the session was: Government grants 52·4 p.c.; student fees 30·2 p.c.; endowments and investments 6·6 p.c.; and other sources 10·8 p.c. The proportion of receipts from investments and endowments has decreased steadily since 1931, when they represented 16·2 p.c. of the current income.

13.—Income and Capital Resources of Universities and Colleges, Academic Years Ended 1921-52

Note.—The larger universities and many of the colleges in Canada are included and represent an enrolment of approximately 80 p.c. of the full-time students of university grade throughout the period. The institutions omitted are mainly those conducted by religious orders where teachers receive little or no salary and the financial returns are, consequently, not comparable.

Year Ended—	Current Income					Deficit[2]	Surplus[2]	Capital Resources

[1] Board and lodging not included. [2] Combined deficits or surpluses of schools reporting.

The Federal Government, as a result of recommendations made by the Royal Commission on National Development in the Arts, Letters and Sciences, instituted a system of university grants, the first of which were paid during the academic year 1951-52. In that year, 83 institutions received a total of $6,991,950. The grants were paid on the basis of 50 cents per head of population in each province, the eligible institutions receiving their share of the provincial allotment on the basis of the number of full-time students at university level attending degree courses. The distribution of payments, by province, is shown in Table 14.

14.—Federal Government Grants to Universities, by Province, Academic Year 1951-52

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

An outline of the *Report of the Royal Commission on National Development in the Arts, Letters and Sciences*.* which was tabled in Parliament on June 1, 1951, is given in the 1952-53 Year Book, pp. 342-345.

Section 1.—The Relationship of Art to Education†

Fine Art Schools, Galleries and Museums.—Fine art appears as an elective subject in the curricula of the faculties of arts in a number of universities, where it may be taken as one subject among five for a year or two; in some, e.g., Acadia University, N.S., there are six or more elective courses. In Mount Allison University, N.B., and in the Universities of Saskatchewan and Manitoba, there is a sufficient number of courses to allow the taking of a Bachelor's degree with specialization in fine art. At the University of Toronto, Ont., an Honour B.A. in art and archæology is offered, as well as graduate work in this field. Departments of fine arts were opened by McGill University (1948-49)—where an Honour B.A. may be taken in fine art and another subject—the University of British Columbia (1949-50) and the University of Alberta (1953-54); McMaster University re-opened its departments in 1951.

There are also schools of art not requiring any fixed academic standing for admission, as they are concerned more with the technical development of the artist. The most widely known of these are:—

Nova Scotia College of Art, Halifax, N.S.
École des Beaux-Arts, Quebec, Que.
École des Beaux-Arts, Montreal, Que.
School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
Ontario College of Art, Toronto, Ont.
University of Manitoba School of Art, Winnipeg, Man.
Provincial Institute of Technology and Art, affiliated with the University of Alberta, Calgary, Alta. (Summer session at Banff, Alta.)
Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student, but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries and museums in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Saskatchewan Arts Board and the Art Institute of Ontario, have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nation-wide program of this nature.

---

* Ottawa, Queen's Printer, 1951.

† Revised under the direction of Dr. H. O. McCurry, Director, National Gallery of Canada, Ottawa.

The principal art galleries and museums* are:—

New Brunswick Museum, Saint John, N.B.
Museum of the Province of Quebec, Quebec, Que.
Montreal Museum of Fine Arts, Montreal, Que.
National Gallery of Canada, Ottawa, Ont.
London Public Library and Art Museum, London, Ont.
Art Gallery of Toronto, Toronto, Ont.
Royal Ontario Museum of Archæology, Toronto, Ont.
Art Gallery of Hamilton, Hamilton, Ont.
Willistead Library and Art Gallery, Windsor, Ont.
Winnipeg Art Gallery, Winnipeg, Man.
Regina College Gallery, Regina, Sask.
Edmonton Museum of Arts, Edmonton, Alta.
Vancouver Art Gallery, Vancouver, B.C.
Arts Centre of Greater Victoria, Victoria, B.C.

The National Gallery of Canada.—Founded in 1880 by the Marquis of Lorne, the National Gallery at first served only as an exhibition gallery. Provided with an Advisory Arts Council in 1907, and first incorporated under a Board of Trustees in 1913, it has assembled a permanent collection mainly during the past 40 years. This collection of pictures and sculpture, prints and drawings, representing the styles of past and present of various parts of the world, was assembled for public enjoyment, study, and the improvement of arts and industrial products, and as the necessary basis of a program of art education. The National Gallery Act, amended in 1951, gives the institution a larger Board of Trustees and other advantages.

The collection of the National Gallery to-day is of international repute and is accessible to the whole country by means of catalogues, photographs, colour reproductions and, to a limited extent, by loans. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art. Each year, examples of the best contemporary work are added, along with those of earlier periods. The addition, in 1953 and 1954, of eight famous paintings from the Liechtenstein collection constitutes one of the greatest events in the Gallery's history. This group comprises two panels of the *Life of Esther* series by Filippino Lippi and *Bathsheba at her Toilet* by Rembrandt, *The Virgin and Child* by Hans Memling, *The Crucifixion* by Quentin Massys, *A Bavarian Prince* by Bartel Beham, *The Lacemaker* by Nicolaes Maes and *The Church of S.M. della Salute, Venice* by Francesco Guardi. An important group of early Canadian paintings was also added, in addition to a number of contemporary works and examples of graphic art. Drawings by Rubens, Ingres, Turner, Girtin, Gainsborough, Picasso and others have also been added. Prints acquired include examples by the Meister E.S., Israhel van Meckenem, Dürer, Rembrandt, Bonnard, Vuillard and others.

In 1953-54, exhibitions of the art of other countries included: *Contemporary Cuban Painters; Swiss Posters;* and *The Art of India.* An important exhibition, *European Masters*, drawn from Canadian collections, was held at Ottawa, Montreal and Toronto. Among the Canadian exhibitions the most important were the retrospectives of A. Y. Jackson and F. H. Varley. Canadian exhibitions were also sent abroad to Venice, Italy; São Paulo, Brazil; Lugano, Switzerland; New Delhi, India; and elsewhere.

The National Gallery conducts a program of extension work throughout the country. The majority of the exhibitions mentioned above, as well as the annual offerings of the chartered art societies and a variety of smaller collections, are available to the entire country and are widely circulated. About 30 such exhibitions are toured and as many as 200 separate showings have been held annually under the auspices of the National Gallery of Canada. In addition, individual loans of material from the collection are made to centres in many parts of the country each year. In this way original works of art are constantly being brought to the attention of the public. Sets of reproductions are also sent on tour of localities that have not the facilities for handling originals.

---

* A complete list of Canadian art museums, societies and schools is included in the Canadian section of the current issue of the *American Art Directory* (New York, R. R. Bowker Co.).

The latest major development in the general educational work of the National Gallery is the Industrial Design Division set up as the result of public interest in bringing the design of Canadian goods up to the best international standards and in fostering distinctive Canadian designs. A number of exhibitions on Canadian industrial art have been held in various parts of the country. In 1953, the Design Centre was opened in the Laurentian Building, Ottawa, to serve as an exhibition centre and as headquarters for the national program in industrial design sponsored by the National Gallery.

Other methods of education in the arts apply more specifically to young people and are designed, in part, to supplement regular school work. The Gallery provides written lectures illustrated by lantern slides on all aspects of art history, reproductions of paintings with introductory texts for art appreciation, school broadcasts, classes for school children at the Gallery, exhibitions of children's art, conducted tours of the Gallery's collections and educational demonstrations. Lecture tours by well-known authorities are also held throughout Canada. In 1953, Eric Newton, a leading English art critic, and his wife, Stella Mary Pearce, an authority on theatre art, travelled from coast to coast lecturing under the sponsorship of the National Gallery.

The National Gallery also maintains a library of art films. These as well as the facsimile colour reproductions and silk screen prints published by the National Gallery are listed in the free leaflet, *Reproductions, Publications and Educational Material*. In connection with the CBC school broadcasts on Canadian artists, the National Gallery in 1953 distributed 250,000 small colour reproductions to school children in all parts of the country. The magazine *Canadian Art*, in the publication of which the National Gallery has taken a leading part, has doubled its circulation since 1945.

Speaking highly of the Gallery's work over many years despite serious difficulties, the *Report of the Royal Commission on National Development in the Arts, Letters and Sciences** made recommendations for the extension and improvement of its exhibition and education services; increases in funds, staff and facilities; maintenance and increase where possible of present appropriations for acquisitions; and, as soon as possible, a new building containing adequate facilities for display, storage, circulation of exhibitions and conservation of paintings.

Between 1952 and 1954 a national competition was held to select an architect for the new National Gallery building. Out of the 104 entries (a record number for an architectural competition in Canada), a jury of international experts chose that of Messrs. Green, Blankstein, Russell and Associates of Winnipeg who submitted a design in the contemporary style distinguished by its simplicity and dignity.

---

* Ottawa, Queen's Printer, 1951. *See* also *Royal Commission Studies, a Selection of Essays prepared for the Royal Commission*. Ottawa, Queen's Printer, 1951.

Other Art Organizations.—The leading art organizations of national scope, exclusive of museums and art galleries, include the following:—

Association of Canadian Industrial Designers
Canadian Arts Council*
Canadian Group of Painters
Canadian Guild of Potters
Canadian Handicrafts Guild
Canadian Museums Association†
Canadian Society of Graphic Arts
Canadian Society of Painter-Etchers and Engravers
Canadian Society of Painters in Water Colour
Canadian Society of Landscape Architects and Townplanners
Community Planning Association of Canada
Federation of Canadian Artists
Royal Canadian Academy of Arts
Royal Architectural Institute of Canada
Sculptors Society of Canada.

Section 2.—The Educational and Cultural Functions of the National Film Board‡

If education be considered a process providing materials of thought, and culture be regarded as the self-expression of a people, then the National Film Board, by its terms of reference and by its common practice, is playing a part in both.

The task of "interpreting Canada to Canadians and to other nations" was given to the Board by Parliament after World War II. This was, in a general sense, a mandate to educate Canadians and others in the meaning of Canada. Direct education, of course, remains in the hands of the provinces.

The Board participates indirectly by consulting with the Canadian Education Association on films and series of films. A committee on which both the Board and the Association are represented meets to advise on film programs. The latest result of this co-operation is a new film on the mountain regions of Canada's west coast, *Mountains of the West.* The same consultation and co-operation extend to the production of filmstrips.

The Board's films and filmstrips, as well as still photos are extensively used in Canadian schools. In the year ended Mar. 31, 1953, school showings of Board films reached a total of 94,702. Libraries of informational and educational films are maintained in a number of schools and universities in both Canada and the United States as part of the Board's non-theatrical distribution system. This system, which brings films to people outside the theatres, includes more than 400 film councils in Canada, representing more than 10,000 different groups. Film libraries and depots number 387.

People in other lands are learning about Canada through direct distribution of the Board's films and by exchange agreements through the International Council for Educational Films. These agreements provide for mutual film distribution by member countries on a reciprocal basis. The Board has produced two films for distribution through these channels. *Winter in Canada* and *The Physical Regions of Canada.*

---

* An account of the Canadian Arts Council and a list of its constituent bodies appears in the 1951 Year Book, p. 308.

† Formed in 1947 with the object of improving the services of museums as educational institutions by promoting co-operation among themselves, by exchange with other countries and by the training and securing of expert staffs.

‡ Prepared under the direction of the Government Film Commissioner, National Film Board. Other aspects of NFB services are outlined in Chapter XXIX. *See* also Chapter II, p. 104.

The Board's still photos division currently is producing picture books about Canada for use in schools. The Board through its productions, provides a medium of expression for artists, writers, composers, musicians and actors. Real national culture cannot be forced however; rather it is a slow, profound and powerful unfolding from the very roots of popular consciousness. This being so, it is important to record its development as a stimulus to continued growth. This the National Film Board is doing in its films.

Recently, the Board has brought to Canadian audiences films on the Stratford Shakespearean Festival; a music festival in Saskatchewan; the Opera School of the Toronto Conservatory of Music; the Winnipeg Ballet; Canadian artists Frederick Varley and Arthur Lismer; Deichmann pottery in New Brunswick; as well as an excerpt from Hugh MacLennan's novel, *Each Man's Son;* and *L'Homme aux Oiseaux,* a short film written especially for the Board by Roger Lemelin.

Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation*

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in the English and the French languages. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs cover a very wide range of interests and are presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music.

Pre-school Broadcasts.—Though many story programs for pre-school-age children are broadcast purely as entertainment, a special series has been developed to give young children, particularly in remote areas, many of the benefits of kindergarten training. This series, *Kindergarten of the Air,* is broadcast Monday to Friday for children from two and a half to six years of age. Planned with the advice of kindergarten experts and representatives of the Canadian Home and School Federation, the Federation of Women's Institutes and the Junior League, it includes stories, songs, mental games, keeping-fit exercises, information about animal life and nature study, and encourages good habits of hygiene, eating and relaxation. The program is intended primarily for home listening but has been found useful in many organized kindergarten groups and classes.

School Broadcasts.—In an average school year, more than 1,000 school programs, mostly in dramatized form, are broadcast to all parts of Canada. The CBC also provides upwards of 30 minutes daily broadcasting of specifically planned programs by departments of education to meet classroom requirements. These supplementary aids help teachers to stimulate student imagination and strengthen motives for study. The National School Broadcasts series are planned by the National Advisory Council on School Broadcasting to promote among students a stronger consciousness of Canada and its achievements. During the 1953-54 season, seven such series were planned for students from Grade IV to senior high school. These were: *Voices of the Wild,* on Canadian wildlife; *For Shipment Abroad,* a series dramatizing the Canadian import-export trade with special emphasis on Canadian port cities; *Adventurers All,* a series dramatizing outstanding events in the careers of Canadian explorers; *Hamlet*, a full-length performance of the Shakespearian drama; *Life in Canada Today*, a series of features on the work of Canadians; *Commonwealth Round-up*, comprising four programs on interesting aspects of other Commonwealth nations with specially recorded effects contributed by the broadcasting organizations in the United Kingdom, Australia, New Zealand and Pakistan; *Music in the Making*, a series of five broadcasts in which a new approach to music appreciation was used—a composer, Joseph Haydn, tells about his life with particular emphasis on one of his works, *The Surprise Symphony*, a movement of which was played in each program. This latter series was particularly successful.

---

* Prepared under the direction of J. Alphonse Ouimet, General Manager, Canadian Broadcasting Corporation, Ottawa. Other aspects of CBC services are outlined in Chapter XX.

The first experimental television programs for school use were presented during the 1953-54 season. These were four broadcasts planned to provide a visual supplement to the four school radio broadcasts, *Life in Canada Today*. The telecasts were presented in after-school hours for home viewing. Teachers made use of the stimulation and information gained by students viewing the program by conducting follow-up lessons on the next school day. A report on the teachers' evaluation of the experiment was published by the CBC under the title: *Can TV Link Home and School?*

In the province of Quebec, the CBC's French network broadcasts *Radio-Collège*, a series of weekly programs dealing especially with the fine arts, music, literature, theatrical arts, sciences, religion and philosophy. These broadcasts are not designed for classroom use, being of a more adult nature than those on the English-language networks and scheduled, in the main, for other than school hours.

Particulars of school broadcasts are contained in the manual, *Young Canada Listens*, and details of the French network series in the manual, *Radio-Collège*. Both are published annually by the CBC.

Adult Education.—Programs of an adult education nature are presented frequently by the CBC on its radio and television services. In the planning of these programs co-operation is received from various educational organizations. The CBC is an active participant in the work of the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Radio Programs.—Citizens' Forum is a round table program on which a panel of experts discuss important issues of the day. It is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, *Les Idées en Marche*, is planned in co-operation with La Société d'Education des Adultes. A similar type of program, but one prepared specially for rural listeners, is *National Farm Radio Forum*, arranged in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. All these forum programs are heard by organized listening groups, which continue the discussion of the topic at the conclusion of the broadcast.

For the past three summers the evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions.

Other programs of an educational nature are *Cross Section,* a series of drama documentaries dealing with economic and social questions; various dramatized series in the field of human relations and mental health; and *Trans-Canada Matinée,* a daily afternoon program including informative talks and commentaries designed specially for the woman in the home. This latter program was one of six CBC programs that captured a First Award at the 1954 Exhibition of Educational Radio and Television Programs at Columbus, Ohio. On the French Network, *Forum de Radio-Parents* presents broadcasts designed to help parents on the subject of child care, and general questions sent in by parents are answered by psychologists in the series *Le Courrier de Radio-Parents.* For women listeners the daytime program *Femina* is presented twice weekly.

In addition, talks on a wide range of subjects including international affairs, Canadian history and community activities are broadcast regularly.

Television.—Organized in co-operation with the Universities of Toronto and Montreal and McGill University, the program *Exploring Minds* presents—in panel or lecture form—examples of the work of the modern university. On *This Week* the important world news of the preceding week is discussed by a panel of experts. *Fighting Words* is a program on which guest experts in the fields of arts and sciences discuss controversial quotations sent in by viewers. A daily program—*Living*—presents information of interest to consumers on a wide variety of commodities and services.

Section 4.—Public Libraries

The National Library of Canada, authorized by the National Library Act of June 18, 1952 (1 Eliz. II, c. 330), formally came into existence on Jan. 1, 1953. The work formerly carried on by the Bibliographic Centre and the staff of the Centre were then absorbed by the National Library, which came under the administration of the Secretary of State.

National Library Act.—The Act provides for the establishment of an Advisory Council consisting of fifteen members, including in that number at least one representative from each of the ten provinces; the appointment of a National Librarian, Assistant National Librarian, and staff. Duties of the National Librarian include the establishment of a National Union Catalogue listing the books in every important collection in Canada; the purchasing of book stock; and the publication of a National Bibliography listing books published in Canada, written by Canadians, or of special interest to Canadians. Section II of the Act requires two copies of each book published in Canada to be supplied to the National Librarian within one month of the date of publication; one copy of expensive books must be deposited.

Sketch plans for the National Library building have been prepared for submission to the National Capital Planning Committee. The acquisition of book stock is limited until permanent quarters are available, but activities in other departments of the Library reflect noteworthy progress. The coverage of *Canadiana,* a bilingual monthly publication listing new Canadian publications, has been expanded to include those issued by all provincial governments. By Mar. 31, 1954, individual library catalogues representing some 4,720,000 volumes in some 60 libraries had been microfilmed for the National Union Catalogue. A department to catalogue the volumes now available has been organized and will soon begin its work using the Library of Congress classification. In addition, the Library has assumed the duty of receiving, registering and acknowledging all books deposited under the terms of the Copyright Amendment Act. Publications deposited in accordance with both this Act and the National Library Act will be received and checked at the same point, thus providing a more convenient method for publishers to comply with the regulations.

Regional Library Service.—Regional library service, or an adaptation thereof, now functions in Newfoundland, Prince Edward Island, Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia. In addition, a Director of Regional Libraries was appointed in January 1954 by New Brunswick, preparatory to the establishment of a regional library system in that Province, and preliminary surveys are being undertaken in Manitoba.

Statistics for the regional libraries in operation during 1953 appear below; those for the two Alberta Regional Libraries for the first time.

1.—Summary Statistics of Libraries Organized for Regional Collaboration, 1953

Regional Organization	Volumes	Circulation	Expenditure		
			Book Stock	Salaries	Total
	No.	No.	$	$	$

[1] Includes Gosling Memorial Library.

Local Public Libraries.—Public library service in Canada includes the large library and its branches in metropolitan areas—sometimes augmented by bookmobile service to outlying districts; small association libraries in villages and hamlets; regional service on a county or wider basis; and the use of boats and the mails to supply remote rural areas. In these ways some 75 p.c. to 80 p.c. of the population receive library service.

The current DBS *Survey of Libraries* presents statistics on library operations for 1951. Operations of the 782 public libraries surveyed are given in Table 2.

2.—Summary Statistics of Public Libraries, by Province, 1951

Province	Volumes	Circulation	Borrowers	Expenditure	Full-Time Staff
	No.	No.	No.	$	No.
Newfoundland	41,649	264,837	24,209	114,489	17
Prince Edward Island	77,417	218,635	27,213	35,033	6
Nova Scotia	144,114	505,793	42,539	189,583	40
New Brunswick	91,032	172,283	14,048	40,238	12
Quebec	1,079,172	1,484,468	86,564	652,557	152
Ontario	4,523,640	15,696,486	839,423	3,662,369	770
Manitoba	179,326	874,313	48,034	207,349	60
Saskatchewan	323,445	938,133	50,673	256,791	51
Alberta	402,563	1,765,593	76,191	352,987	81
British Columbia	603,690	3,179,379	181,713	936,617	208
Totals	**7,466,048**	**25,099,920**	**1,390,607**	**6,448,013**	**1,397**

Of the total libraries, 85 were in cities of over 10,000 population. They employed 1,128 of the 1,397 full-time staff members (80·7 p.c.) and accounted for over 75 p.c. of the total expenditures. Median salaries in the city libraries for 1951 varied with the size of the city as follows:—

Population of City	*Chief Librarian*	*Heads of Branches or Divisions*	*Other Librarians*	*Other Classifications*
	$	$	$	$
Cities 10,000 - 24,999...........	3,033	2,225	2,035	1,787
Cities 25,000 - 99,999............	3,875	2,590	2,068	1,950
Cities 100,000 or over..........	5,000+	3,425	2,094	2,020

In addition to their primary task of circulating reading material, the public libraries undertake varied special services. City libraries in 1951 lent over 90,000 films and 109,437 records, gave 434 concerts and 94 art exhibitions and presented 378 radio and drama shows. Some 4,879 story hours for children were presented, usually on Saturday mornings.

Academic Libraries.—The 179 libraries surveyed in 1951 contained about 7,388,000 volumes. Full-time staff numbered 496 and an additional 546 worked part-time. Of all these, 244 were trained in library science.

Government Libraries.—Sixty Federal Government libraries reported 1,738,838 volumes and 34 provincial government libraries reported 962,332 volumes in 1951. The federal libraries employed 225 full-time staff members and the provincial libraries had 111.

Section 5.—Canada and the United Nations Educational, Scientific and Cultural Organization

Liaison between governmental and voluntary organizations in Canada and the United Nations Educational, Scientific and Cultural Organization is the responsibility of the Department of External Affairs. Canadian participation in UNESCO includes representation at the Sessions of the General Conference; the supplying of advice and information on Canadian matters to the Secretariat of UNESCO; co-operation in projects undertaken by the Organization; the sending of Canadian representatives to international seminars sponsored by UNESCO; the administration of UNESCO fellowships and scholarships tenable in this country; and the promotion of UNESCO publications.

General Conferences of UNESCO are now held every two years. At these conferences progress during the preceding years is reviewed and a program for the next two years is determined. Fundamental education and technical assistance are regarded as the most important parts of the UNESCO program. In the scientific field, research toward improving the living conditions of mankind is emphasized and encouragement is given to projects designed to improve scientific liaison. UNESCO also endeavours to promote cultural exchanges, improve the means of communication among the peoples of the world and stimulate the exchange of persons between nations.

The total UNESCO budget for the year 1954 was $9,461,449, and Canada's share was 3·54 p.c. or $334,935.

More than 100 voluntary organizations, official agencies and departments co-operate with the Department of External Affairs in arranging Canadian participation in the UNESCO program. Canadian support of UNESCO is considered to be an integral part of the country's support of the United Nations program of peace through international understanding.

PART III.—SCIENTIFIC AND INDUSTRIAL RESEARCH*

Section 1.—The National Research Council

Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research under a Committee of the Privy Council. Provision was made thereby for the planning and integration of research work, the organization of co-operative investigations, post-graduate training of research workers, and the prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

A Special Committee of Parliament, appointed to study a recommendation for the establishment of national laboratories, endorsed the proposal and the Research Council Act was revised by Parliament in 1924. Temporary laboratories were secured and research on the utilization of magnesian limestones for refractories was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result, in 1929-30 the Government provided funds for new laboratories.

The National Research Building on Sussex Street, Ottawa, was opened in 1932 and in 1939 construction was begun of the aerodynamics building on a 130-acre site adjacent to the Rockcliffe Airport of the Royal Canadian Air Force. Later, other buildings were erected on this site, including wood-working and metal-working shops and separate laboratories for research on engines, gas and oil, hydraulics and structures. These facilities have since been enlarged and extended and new buildings have been provided for engineering, low-temperature studies and high-speed aerodynamics. In 1952 a cosmic-ray laboratory, a thermodynamics building and a large structure to house the Division of Applied Chemistry were added and in 1953 a modern laboratory was constructed, in one of the Montreal Road service tunnels, for the exact measurement of surveyors' tapes. That year also saw the completion of the large and beautiful Building Research Centre, and the construction, on a new 250-acre site on the opposite side of the road, of the new headquarters for the Division of Radio and Electrical Engineering. An underpass connects the two areas. The flight research section of the Division of Mechanical Engineering was transferred from its temporary quarters on the Arnprior Aerodrome to permanent quarters at Uplands Airport near Ottawa.

A Prairie Regional Laboratory, constructed on the campus of the University of Saskatchewan, has been in operation since June 1948. A Maritime Regional Laboratory, built on Dalhousie University campus at Halifax, N.S., was opened in June 1952. The co-operation of a large oil company has made it possible for the Division of Building Research to establish a Permafrost Research Station at Norman Wells, N.W.T. This is one of the most northerly building research establishments in the world.

---

* Sections 1 and 3 of this Part were prepared under the direction of Dr. E. W. R. Steacie, O.B.E., President, National Research Council, Ottawa.

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour or research in one of the basic natural sciences. Many of the members are drawn from the science departments of Canadian universities.

The Council's scientific and engineering activities are organized in nine Divisions and two regional laboratories, each with its own Director. Four laboratory Divisions are concerned with fundamental and applied studies in the natural sciences: applied biology, pure and applied chemistry, and physics. Three others are devoted chiefly to engineering work—building research, radio and electrical engineering, and mechanical engineering which includes aeronautics and hydraulics. The Division of Medical Research has no laboratories of its own but awards grants-in-aid and fellowships tenable chiefly in the medical schools of Canadian universities.

In addition to its basic research functions, the Council operates an Information Service with a field staff of technical officers who assist the smaller industries across Canada by bringing their operating problems to the attention of the Council. Through a trained research staff, using the extensive library facilities available to the Council, it is usually possible to provide the required information at very short notice.

The Council aids industry in two other important ways. A free and constant flow of personnel and information is maintained between the Council laboratories and industrial laboratories, the aim being to have Canadian industry use the Council's laboratories just as the units of a large company use their own laboratories as sources of scientific information and assistance. The Council also undertakes for any firm, under contract, research problems that cannot be solved by private consulting and testing laboratories and, in return, obtains assistance from many companies. The Council has long-standing and intimate contacts of this co-operative kind with many Canadian industries in various fields.

Associate committees were established by the National Research Council early in its history and have been continued to date. Throughout the years, hundreds of specialists have accepted invitations from the Council to serve on committees and have brought the wealth of their knowledge and experience to bear on the solution of research problems put before them. Members of committees give their time and effort to these special studies without fee or recompense, and their assistance is a source of great strength to the Council.

Assisted research grants have been made by the Council since its inception in 1916. These awards are given to heads of university science departments for the purchase of needed equipment and the employment of junior helpers, usually students. Aid of this kind has been of considerable assistance in enabling the universities to put into operation the excellent graduate schools that now exist in Canada. In 1953-54, more than $2,000,000 was provided out of Council funds for basic research at Canadian universities.

Scholarships and grants in aid of research are awarded annually by the National Research Council. Scholarships awarded in science and engineering include Bursaries, Studentships and Fellowships which have values of $800, $1,100 and $1,400, respectively, for the academic year, to which a summer supplement of $800 may be added. In addition, Special Scholarships valued at $1,900 per year and Post-doctorate Overseas Fellowships at $2,500 are offered. The Council also awards two classes of Graduate Medical Research Fellowships, which have values of $1,800 to $3,500 for awards involving graduate training, and up to $5,000 for senior awards in advanced research. Graduate Dental Research Fellowships of similar value are also made. Some 200 of these different awards were made for 1953-54, totalling in value over $265,000.

In recent years (since 1948), the National Research Council has opened its doors to a limited number of post-doctorate fellows who have been carefully selected on the basis of merit from the universities of the world. There are now about 100 of these keen young scientists working in the laboratories, most of them in chemistry, physics or applied biology. They are appointed for one year only but may be retained for a second year if conditions warrant. This flow of young men through the laboratories has a most stimulating effect; it creates a sort of university atmosphere that is both fresh and invigorating and keeps the Council young.

Principal Activities, 1953-54.—In the Division of Applied Biology and at the Prairie Regional Laboratory much work has been done in 1953-54 on industrial uses for surplus wheat, other agricultural products and waste materials. Some of the projects undertaken in the Division of Applied Biology are outlined in the following paragraphs.

Laboratory and pilot-plant studies of the production of butylene glycol from cereal grains, beet molasses and waste sulphite liquor have been completed. The product is of potential value in the chemical industry and, in one form, as an anti-freeze. Citric acid, now imported in large quantities, has been produced in high yield by a new and more rapid method of submerged fermentation of beet molasses; laboratory studies have been completed and pilot-plant investigation is in progress. Work has also been carried out on production of frozen concentrated milk. For normal storage conditions, slow freezing has been found to give a more stable product than rapid freezing.

At the Prairie Regional Laboratory, studies are being carried out on the drying of damp grain by a new process, with a view to the development of a more economical farm or country-elevator drier. The process originated in the Division of Applied Chemistry.

The Prairie Laboratory has carried out many analyses of the constituent fractions of the oils from flax, rape and safflower seeds and has a program of work under way which should help in making rape oil, in particular, acceptable to the food trades. Most food oils used in Canada are now imported and it is considered important that Canada produce its own requirements by replacing part of the acreage now devoted to wheat with oil-seed crops. Studies are also being made on the fractionation of linseed oil with a view to improving its quality for various industrial purposes.

Pilot-plant studies on the production of insulating boards (similar to Ten-test) from wheat straw have shown that excellent boards of superior quality can be made. Commercial production will be undertaken in the near future if the economics of the project are satisfactory to the industry.

Basic studies on the cereal rusts are continuing. An attempt is being made to grow these organisms in culture in order to ascertain the reason for so many different strains arising. Work is also being done on the biochemistry of starch, lignin, cellulose and other constituents of wheat.

Scientists at the Maritime Regional Laboratory are interested in a different type of project and have concerned themselves with the study of the composition of seaweeds and their use as feeds and fertilizers; the investigation of Irish moss of which millions of pounds are exported annually; the extraction of the gelling agent from this moss and much information about it that can be used in the commercial production of better extracts; and the search for a good method for preparing algin from rockweeds which are abundant in the Maritime Provinces. Algin finds many uses in the textile, food and pharmaceutical industries.

Highlights of the work of other Divisions are as follows:—

Scientists and engineers in Building Research made soil temperature studies in the Far North as part of their permafrost investigations in co-operation with the Army, extended the snow cover survey of Canada, and completed the full-scale testing of a large pre-stressed, pre-cast, 100-ft. reinforced concrete beam.

In the Division of Mechanical Engineering, a start was made on a hydraulic model of a navigation lock for the St. Lawrence Seaway. Designs were prepared for two models of the St. Lawrence River, each representing a five-mile section. A special "re-heat" system, developed to increase the thrust of a jet engine by injecting additional fuel into the tail pipe, reached the testing stage. Aircraft icing, de-icing, and anti-icing research yielded valuable results; the low-temperature laboratory participated in flight testing, under icing conditions, of a CF-100 aircraft equipped with icing protection.

The Division of Radio and Electrical Engineering installed an automatic radio beacon at Charles Island, Hudson Strait. Microwave trial equipment for two isolated fog-alarm stations on the Pacific Coast was designed and built and a machine for sorting paper forms, such as cheques, was patented. The Division devised and patented a new type of mechanical a-c line-voltage stabilizer, which is now being manufactured under licence by a Canadian company. Engineers from the Division and scientists from medical institutes collaborated in the development of electronic devices for use in surgery, including apparatus for resuscitation of the heart.

Developments that have been brought to a reasonably complete stage in the Division of Applied Chemistry include: a coating for transparent surfaces to render them water repellent; a high-strength rubber-base cement, suitable for bonding rubber and various solids; and an antifreeze formulation that prevents the corrosion of zinc-containing alloys frequently encountered with inhibited glycol solutions at low temperatures.

The Division of Physics operates in two Branches—pure and applied. One of the main functions of the applied Branch is the work on standards of length, mass, electricity, radiation, etc. For instance, one of the groups calibrated a set of carbon filament lamps by the use of a small refractory tube immersed in molten platinum; the brightness of the open end of such a tube at the temperature of the solidification of the platinum is recognized by international agreement as the primary standard of light. This Branch also carried on, among many other things, the mapping of urban areas, aimed at providing economical photogrammetric methods for accurate large-scale plans. In the pure physics Branch, a contribution has been made to the knowledge of how certain metals behave over a wide range of temperatures from close to the absolute zero (459·4° below zero F.) up to 200°C. (392°F.). A universal detector has been developed which can be used to pick out any atomic or molecular beam; the apparatus has already been used to study silver, gold, and boron; until recently these three atoms could not be investigated by atomic beam methods.

The efficiency of methods for the production of Raman spectra of gases has been increased; this improvement has made it possible, for the first time, to establish precise values for the geometrical dimensions of the benzene molecule. Variations of cosmic ray intensity at sea level have been studied, by means of Geiger counters and similar equipment, at Ottawa and at the Arctic Weather Station at Resolute Bay. To obtain new information on primary cosmic rays and nuclear reactions caused by cosmic rays, several batches of photographic plates have been sent by balloons to altitudes of over 100,000 ft. (Scientists in the United States helped with this project.)

The Pure Chemistry Division is concerned with investigations in the major fields of chemistry—organic, physical, inorganic, and colloid. Most of the work is fundamental—trying to find out why certain chemical reactions behave as they do, and determining the ultimate spatial structure of unknown compounds.

In medical research, there is the closest integration of the Council's fellowship and medical research program with similar programs of the Defence Research Board, the National Cancer Institute, the Canadian Arthritis and Rheumatism Society, and the Federal Departments of National Health and Welfare and of Veterans Affairs. In 1953-54 five consolidated research grants and 160 individual awards were made by the Division of Medical Research and 21 fellowships were provided. The Division also supported, through substantial grants, the production of growth hormone for experimental purposes by the Connaught Medical Research Laboratories.

In conclusion, it should be noted that the results of pure research, owing to its highly theoretical nature and its essentially long-range character, cannot be "pinned down" easily on a year-by-year basis. Nevertheless, one of the Council's projects in pure research won wide popular acclaim, when scientists at the Prairie Regional Laboratory successfully synthesized three sugars—maltose, sucrose (common sugar), and trehalose. This achievement was hailed as one of the outstanding accomplishments of the scientific world in 1953.

Section 2.—Research in the Atomic Field*

Atomic energy research in Canada had its origin over 50 years ago when Ernest Rutherford came to this country as Macdonald Professor of Physics at McGill University. There, in collaboration with F. Soddy, he announced in 1902 the results of his investigation of the nature of radioactivity, which had been discovered in 1898 by Henri Becquerel. Rutherford determined the fundamental laws governing spontaneous disintegration of radioactive materials, and went on, both in Canada and in England, to make further discoveries of great importance in the development of atomic energy.

Fundamental research into the structure of the atom continued in many countries on a relatively small though fruitful scale over the ensuing years until the first recognition of nuclear fission was announced in Berlin, Germany, by O. Hahn and F. Strassman on Jan. 6, 1939. Soon it was discovered that when a neutron split a uranium-235 atom, not only was a remarkable quantity of energy released, but also additional neutrons were given off. This suggested the possibility of creating a chain reaction so quick that a new and tremendously powerful explosive would be available for military use.

---

* Prepared by Clyde Kennedy, Public Relations Officer, Atomic Energy of Canada Limited, Chalk River, Ont.

The onslaught of World War II in August 1939 pushed into the background interest in harnessing the vast energy now recognized to be contained within the nucleus of the atom, but when scientists drew to the attention of their respective governments the possible military application of atomic energy, development work was accelerated.

In Canada, first investigation of the possibility of releasing a large quantity of energy from uranium took place under the direction of Dr. George C. Laurence in 1940 at the National Research Council.

While experiments continued at the National Research Council, the United States moved quickly toward achieving a chain reaction, and on Dec. 2, 1942, the first nuclear chain reaction to be initiated by man began a controlled release of the tremendous energy stored within the atom. This was done by American scientists, at the University of Chicago, working under the direction of Enrico Fermi.

In 1942, the Governments of the United Kingdom and of Canada agreed to set up a joint Canadian-United Kingdom atomic energy project in Canada. By January 1943, British scientists arrived to work with hastily recruited Canadian scientists in a research centre established on Simpson Street, in Montreal, Que. In February, the group moved to the University of Montreal where considerable progress was made in the investigation of fundamental nuclear processes.

At the Quebec Conference in August 1943, President Roosevelt, Prime Minister Churchill and Prime Minister Mackenzie King agreed that closer co-ordination of the allied efforts in the nuclear field was desirable and it was agreed that a large heavy-water pile should be built immediately in Canada. A technical committee consisting of General Leslie Groves, Sir James Chadwick and Dr. C. J. Mackenzie was set up to co-ordinate this joint program on atomic energy. Dr. J. D. Cockcroft of Britain was appointed Director and a Crown company, Defence Industries Limited, was engaged to undertake the detailed design and construction of the atomic energy pile at Chalk River, about 130 miles west of Ottawa. Construction was started in 1944 and by September 1945 a small low-power atomic energy pile, known as ZEEP, was in operation. This was the first pile, outside of the United States, to produce energy by nuclear fission.

In December 1946, by Act of Parliament, all matters concerning atomic energy in Canada were placed under the Atomic Energy Control Board. The Board immediately asked the National Research Council to assume responsibility for the operation of the establishment at Chalk River, and the Council formally took over that responsibility on Feb. 1, 1947. By then, 400 scientists and engineers were engaged on research and development of atomic energy, the largest organization ever created in Canada to carry out a single research project.

Dr. David A. Keys took on direction of the Chalk River project in 1947, with the research program being directed by Dr. W. B. Lewis. Dr. Cockcroft returned to England to take charge of the United Kingdom atomic energy project, which was founded in 1946.

In July 1947, Canada's second reactor (the term reactor has replaced "pile" in atomic energy parlance) went into operation. This reactor was of special significance because it had the highest neutron flux of any known reactor and, like ZEEP, used natural uranium as a fuel and heavy water as a moderator. It has produced radioactive isotopes with a high specific activity for which there is great demand.

Purchasers of Canadian isotopes include the United States, the United Kingdom and various countries in Western Europe and South America. Shipments have also been made within Canada to industries, hospitals and universities.

The growing view that large-scale industrial application of atomic energy was closer at hand than had been expected made the Government decide to have the Atomic Energy project operated by a separate organization freed from all other responsibilities. A new Crown company, Atomic Energy of Canada Limited, was therefore incorporated in February 1952, under the Atomic Energy Control Act, 1946. The new company took over the operation of the project from the National Research Council on April 1, 1952. Dr. C. J. Mackenzie became its first President, and was succeeded in November 1953 by W. J. Bennett, who was also President of Eldorado Mining and Refining Limited. Dr. Mackenzie continued as President of the Atomic Energy Control Board.

In June 1954, the Government decided that the company responsible for the supply of uranium, Eldorado Mining and Refining Limited, and the company responsible for the research and development aspects of the program, Atomic Energy of Canada Limited, should be joined as the work at Chalk River had reached the point where it was believed possible to produce electricity (by the heat created within reactors) within an economical cost range.

So that the work of these two Crown companies could be more closely integrated in the development of atomic power, it was decided that a holding company should be incorporated. The responsibilities of the original companies would not be changed but they would, in future, be Divisions of the holding company which would report to a Cabinet Minister—the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

In the 1953-54 atomic power program a "feasibility study group" was established in co-operation with several public utilities and private companies, which had as its immediate goal the production of specifications for a pilot power reactor and the evaluation of cost per kilowatt of the electricity which such a reactor would produce.

In June 1954, the Government set up an Advisory Committee on Atomic Power Development, consisting of senior executives of power companies throughout Canada and this committee will keep Canadian power producers informed of the nature and scope of the program at Chalk River. The committee also assists in evaluating the economic importance of possible atomic power in the various regions of the country.

The development of atomic energy was furthered by the experience gained by the decontamination and reconstruction of the NRX reactor which broke down Dec. 12, 1952, and went back into operation Feb. 17, 1954.

Prior to the NRX breakdown it had been feared that a major accident with a reactor of such high power rating might force its abandonment. The decontamination was carried out without injury to personnel despite an unprecedented spreading of highly radioactive fission products and methods of decontamination were developed for a variety of materials. Scientists and engineers gathered information which will be invaluable in future reactor designs. The restoration of the NRX reactor, believed to be the first reactor of high power to be taken apart and reconstructed after several years of operation, has been followed with considerable interest by atomic energy establishments in other countries.

Modifications made to the reactor during its reconstruction have made possible steady operations at 40,000 kw—a power output 33 p.c. higher than was attainable before the breakdown—with the result that a shorter time is now required for many research experiments and for the production of radioactive isotopes. Furthermore, more advanced experiments relating to atomic power development are possible and the testing of components for the new NRU reactor is more effective.

Satisfactory progress was made in the construction of the new NRU reactor at Chalk River. Like the NRX reactor, it will use natural uranium for fuel and heavy water as a moderator. The fuel elements of the NRX reactor are cooled by running river water directly through the reactor. In the NRU reactor, however, the heat will be carried out of the reactor by the circulation of the heavy-water moderator to heat exchangers from where the heat will be carried away by river water. The NRU reactor, moreover, will have a considerably higher neutron flux (density of neutrons within the core).

The Physics Division of the Corporation continued experiments with the Van de Graaff generator, the low-voltage accelerator, and the beta ray spectrometer. Experiments with these machines, together with work previously carried out with a beam of neutrons from the NRX reactor, have led to additional knowledge of nuclear energy output and of the structure of the atomic nucleus.

New and improved electronic instruments were designed for use with the NRX reactor, and continue to be studied in the search for greater reliability and reduced size. A new gamma ray health monitor was developed, for example, and has been in satisfactory operation for several months; development of radiation detection instruments for the Department of National Defence also is continuing.

The Chemistry and Reactor Research Division is carrying out extensive experiments to obtain data upon which the designs of future reactor systems will be based.

Studies have been made of the use of plutonium as a nuclear fuel and new arrangements of fuel elements for power reactors have been studied with the aid of the ZEEP reactor. Chemical and metallurgical methods for processing irradiated uranium fuel elements continue to be developed. The Department of Mines and Technical Surveys is studying the corrosion of these metals and their alloys in different materials that might be used as coolants in reactors. The Department continues to supply the personnel for the Company's Metallurgy Branch.

In the Biology Branch radioactive isotopes are being used to study deficiency diseases in mammals and the synthesis of essential constituents of living cells. Studies of the mechanism by which radiation affects living material were continued with the aid of rapidly reproducing micro-organisms.

The Commercial Products Division of Atomic Energy of Canada Limited, which has its headquarters in Ottawa, handles the marketing—some of it international—of radioactive isotopes produced at Chalk River. The Division's catalogue lists more than 100 different isotopes which may be purchased. Their industrial use ranges from testing welds to the control of thickness of material, such as paper, as it comes through the manufacturing machines. Agriculture and medicine are also served: isotopes such as iodine-131, phosphorus-32, and gold-198 are for use in the human body. The Division also provides an advisory service to users of radioactive isotopes, and a consulting and operating service which includes experimental or research work on a contract basis.

The production of isotopes at Chalk River ceased while the NRX reactor was being reconstructed. However, a supply of certain long-lived fission products had accumulated and these continued to be sold. The United States Atomic Energy Commission assisted the Division by making available certain processed isotopes. From all sources of supply, the Commercial Products Division made more than 1,000 shipments during 1953-54. Moreover, sufficient radioactive cobalt-60—the source of gamma rays in the Cobalt Beam Therapy Units used in the treatment of cancer—was recovered from the NRX reactor to allow the installation of several complete therapy units at various hospitals and the manufacture of the units that contain the cobalt-60 sources was continued at the Division's shops in Ottawa. Immediately after the reactor went back into operation in February 1954, the manufacture of the irradiated cobalt was resumed.

Section 3.—Other Scientific and Industrial Research Facilities

Aside from the work of the National Research Council and Atomic Energy of Canada Limited, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries.

Several provinces in Canada have established Provincial Research Councils to stimulate and support research on problems having special provincial significance.

The universities, of course, form an extremely important part of the Canadian pattern of research, much of it along fundamental lines; however, practical problems are not neglected, especially those of regional interest.

All three types of institutions—federal, provincial and university organizations —have an interest in problems of industrial significance: this is part of the current Canadian pattern of research. Though many Canadian industries now possess research facilities—some of them quite extensive—the main bulk of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

Federal Institutions.—Although research by industrial concerns has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and secondly because of the more recent interest in the processing of these raw materials and because of the necessity to meet the needs of national defence. Federal institutions involved in research include the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, Northern Affairs and National Resources, and Trade and Commerce; the National Research Council; and Crown corporations such as Atomic Energy of Canada Limited. A system of committees, with nation-wide representation, eliminates unnecessary duplication of work from these national research organizations.

The scientific work of the Department of Agriculture is described at pp. 377-378 of this volume, the work of the Defence Research Board in Chapter XXVIII (*see* Index), specialized work in scientific forest research at pp. 453-461, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys at pp. 497-501, investigational work of the Department of Fisheries at pp. 590-594; and the work of the National Research Council at pp. 357-361. The activities of the other federal institutions engaged in research are described briefly in the following paragraphs.

Department of National Health and Welfare.—The Department of National Health and Welfare is engaged in research activities, its Food and Drug Divisions, Laboratory of Hygiene, Occupational Health Laboratory and various clinical services conducting scientific studies in their special fields. The Department has provided considerable funds for research in public health. There are, for instance, federal health grants to assist the provinces in work on the prevention and treatment of crippling conditions in children, mental health, tuberculosis, the control of cancer and of venereal disease. To co-ordinate its medical health programs, conferences are held by representatives of the National Research Council, Defence Research Board, the National Cancer Institute and the Public Health Research Grants Committee. These Conferences provide for reasonably clear definition of the field of each organization and have prevented uneconomical overlapping.

Department of Trade and Commerce.—Rapid development of grain production in Western Canada led to the passing, in 1912, of the Canada Grain Act. This Act is administered by a Board of Grain Commissioners responsible for control of the transportation, weighing, grading and warehousing of Canadian grain. The Board soon encountered problems that required scientific study and a Grain Research Laboratory was established at Winnipeg in 1913.

The Grain Research Laboratory is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. Each year the Laboratory provides certain information required by the Board for administering the Canada Grain Act. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed towards increased understanding of what constitutes quality in cereal grains and towards improving the methods of assessing quality.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown corporation established in 1948. The primary purpose of the company is to make available to industry, through licensing arrangements, new processes and improvements in processes developed by the scientific workers of the National Research Council. The services of the company have also been made available to government departments and other agencies, and have been extended to Canadian universities. The company arranges to obtain patents of inventions originating in these agencies and handles all licensing matters for them. Any profits that the company may derive from its licensing arrangements are used for further research and development.

Provincial Organizations.—The fact that only a few provincial research organizations exist does not indicate a lack of interest in research by the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems. Agriculture is particularly well covered because of its great importance as an export industry; the network of Federal Department of Agriculture laboratories and Experimental Stations, together with agricultural colleges and provincial research councils, provides this industry with a very well-developed research service.

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people additional scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root-nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and underground gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, seaweed, forest aphidæ and forest ecology surveys and assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. During the summer of 1954, 85 people were engaged on 27 projects.

Research Council of Ontario.—The Research Council of Ontario was established in 1948 and given the task of advising the Provincial Government on industrial, agricultural and other research activities within the Province. Its responsibility is to establish research projects and programs, whether fundamental or applied, to integrate and co-ordinate all research within the Province, whether public or private, provincial or extra-provincial, and to have public funds sufficient to encourage and carry out necessary research activities.

In addition, the Research Council has the responsibility of administering a scholarship fund which is used for the training of research and scientific workers. Another function of the Council is to encourage the establishment of group research projects in which certain industries and the Provincial Government collaborate.

Saskatchewan Research Council.—The Saskatchewan Research Council was established in 1947 for "research and investigation in the physical sciences as they affect the economy of the Province of Saskatchewan, and such particular matters as may be brought to its attention from time to time by the Lieutenant-Governor in Council". The term "physical sciences" is given a broad interpretation to include biological sciences, agriculture and engineering. The Council encourages both pure and applied scientific research relating to the resources and economy of Saskatchewan, and works in close co-operation with government departments, the National Research Council and the University of Saskatchewan. Among the current projects supported by the Council are: fundamental studies of lignin and related compounds, beneficiation of uranium ores, application of carbon-14 dating, utilization of wheat starch, cultivation of safflower crop, studies in foundation research, preservation of foods by freezing, winter lubrication, and geological and archæological research. The Council also supports graduate research scholarships.

Research Council of Alberta.—The Province of Alberta set up a Scientific and Industrial Research Council in 1921, the promotion of mineral development within the Province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that setting up the National Research Council and is financed by Provincial Government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the Province. Investigations include studies on coal, the Athabasca oil sands, natural gas, geological research and surveys, soil surveys and irrigation research. The Council maintains a gasoline and oil-testing laboratory and has a group of industrial engineers to provide scientific information to developing industry. The Council laboratories are located at the University of Alberta and work in co-operation with the scientific departments of the University. Operations of the organization are controlled by a council of ten individuals representative of government, the University and industry. The various research projects are under the immediate supervision of advisory committees and the chairmen of these committees form the Technical Advisory Committee of the Council, the body responsible for the integration and operation of the scientific aspects of the program.

British Columbia Research Council.—The British Columbia Research Council, under the sponsorship of the B.C. Department of Trade and Industry, provides a scientific and engineering staff with laboratories at Vancouver, to help British Columbia industries solve their technical problems. Its objective is to enable even the smallest firms to make use of modern technical knowledge and research to improve their competitive position in Canadian and world markets. The Council provides three classes of service: (1) a free information service in collaboration with the National Research Council; (2) assistance to specific firms at cost where information cannot be supplied from existing knowledge; and (3) at the Council's expense, research on problems of general value to the industrial development of the Province.

The Ontario Research Foundation.—The Ontario Research Foundation was established in 1928, and is financed by an endowment fund composed of subscriptions from manufacturers, corporations, private individuals, and a grant from the Provincial Government on a dollar-for-dollar basis with the other contributions. The Foundation carries on research to assist agriculture and industry in developing the natural resources of the Province. A study has been made of the physiography and climate of southern Ontario and also of the parasites found in wildlife in this Province. Many investigations have been undertaken in the industrial field and the Foundation is well equipped to work in metallurgy, textiles, chemistry and biochemistry. The services of the Foundation are at the disposal of industry on a fee basis, and consultative services, testing, short-trial studies and long-term investigations have been undertaken for hundreds of firms. The work has resulted in better products and in more efficient processing.

The Banting Research Foundation.—The Banting Research Foundation supports the work of the Banting and Best Chair of Medical Research in the University of Toronto and aids medical research throughout Canada by making grants-in-aid to those who submit problems of sufficient medical interest to the Board of Trustees. The Board meets and makes grants generally three times a year, around June 1, Oct. 1 and Feb. 1. Five members of the Board of Trustees are appointed by the Board of Governors of the University of Toronto and the Alumni Association of the University of Toronto, and these five members appoint two other Trustees, then the seven members appoint an eighth Trustee.

The Rockefeller Foundation.—The Canadian activities of the Rockefeller Foundation include appropriations to various Canadian universities, institutions and organizations for research in certain limited fields in the natural and social sciences, in the humanities and in medicine and public health, and the financing of post-doctoral fellowships to individual Canadians for work in fields related to the Foundation's general program. Under the public health program, aid is given for teaching in public health and nursing.

University Research.—In eight of the ten Canadian provinces there is at least one major university with graduate-school facilities for training in research. In Ontario there are four; in Quebec, three. In addition, a large number of universities and colleges provide first-class undergraduate training, or training in special fields. Thus, Canadian universities provide adequate training up to the doctorate level in practically all fields of science.

In the main, research in Canadian universities has followed the traditional pattern found in the graduate schools of the British Commonwealth. It has been largely fundamental but, in certain schools, a great deal of research has been done on basic local problems. The universities co-operate with Federal Government departments, provincial government departments, and the National Research Council in researches on most of the natural resources. One such co-operative project has been established at the University of Toronto in the form of a computation centre. This is operated by the University and financially supported by the Defence Research Board and the National Research Council, with the object of developing computation equipment and of training competent operators in this new and complex field of work.

Industrial Research.—In the past, many small industries and some large ones in Canada have been unaware of the value of research to their industries and to the country, partly because many Canadian companies are subsidiaries of companies in the United Kingdom and the United States, and partly because small companies find it impossible to finance their own research. This general problem is well recognized in Canada, but cognizance should be taken of Canada's vast areas, absence of concentration of similar industries, and proximity to the relatively vast research facilities of the United States.

What Canada has done about industrial research, in the face of these rather formidable difficulties, has been partly covered above: in one way or another Canadian universities, provincial institutions and federal organizations have aided Canadian industry.

This picture is changing very quickly. To-day, Canadian industries are rapidly becoming aware of the value of research and many industries now possess research facilities—some of them quite extensive. A survey made by the Canadian Manufacturers' Association a few years ago showed that over 360 of their member companies maintained laboratories in which more than 3,100 persons were employed in research, testing or control. Examples of Canadian industries with powerful research organizations are: Aluminum Laboratories Limited at Kingston, Ont.; Consolidated Mining and Smelting Company at Trail, B.C.; and Ayerst, McKenna and Harrison Limited at Montreal, Que.

Aluminum Laboratories Limited undertakes both fundamental and applied research; its divisions include an industrial group to bridge the gap between scientific development and commercial application, plus mechanical testing, metallography, electro-metallurgy, physics, chemical-metallurgy, analysis and documents. Experimental alloys are constantly being produced and tested for such properties as hardness and resistance to corrosion.

The Consolidated Mining and Smelting Company maintains a large Research and Development Division. It has special laboratories equipped for study in ore-dressing, electrolysis, gas reactions, metallographic and petrographic work, X-ray diffraction of crystals, materials testing, and instrument design, and has many important developments to its credit, including the differential flotation process used on ores of the famous Sullivan mine.

Ayerst, McKenna and Harrison Limited has followed an extensive research program for some years in such fields as vitamins, antibiotics, liver extracts, bacteriological products, sex hormones, gland products, and veterinary medicines. It also does basic research and supervises the Canadian Government plant at St. Laurent for the large-scale production of penicillin.

Other companies with sizable research departments represent many diversified interests, for example: Canadian Industries Limited, International Nickel Company, Dominion Rubber Company, Imperial Oil Limited, Shawinigan Chemicals Limited, the Maple Leaf Milling Company, Canadian Breweries Limited and Canada Packers. There are, of course, many others.

To an increasing extent, recent scientific developments are leading to a reasonably swift industrial application, as shown by the establishment of such companies as Isotope Products Limited at Oakville, Ont., and Computing Devices of Canada Limited at Ottawa, Ont.

To date, however, a large amount of industrial research continues to be done under Government auspices, and sometimes with the co-operation of universities. Two further examples of this Canadian habit of co-operation between industries and other organizations may be cited: the Research Division of The Hydro-Electric Power Commission of Ontario, a provincial service, and the Pulp and Paper Research Institute, intimately associated with McGill University. These organizations are briefly described in the following sections.

The Hydro-Electric Power Commission of Ontario.—The Research Division of Ontario Hydro, with a present staff of 300, provides testing, investigation and research services for all phases of the utility's engineering design, construction work, and system operation and maintenance. The Division maintains a close liaison with other research organizations and power utilities, and staff members participate in the committee work of major technical societies and standardizing associations.

Electrical investigations pertain to improvements in equipment for generating, transmitting, distributing and utilizing power. Problems of electrical insulation, system disturbance recording, protection against lightning, energy metering and illumination are among those studied in such investigations. Attention is given to the performance and efficiency of power equipment, to improved measuring techniques, and to means of minimizing the hazards of electric shock.

Among the structural and mechanical topics studied are the following: metallic corrosion; stresses in structures; noise and vibration conditions; soil mechanics as related to foundations, roads, and earth dams and dykes; the physical properties of structural components and of numerous items such as conductor joints and line hardware; the mechanical performance and safety features of various types of machines; welding materials, techniques and applications; and a variety of problems associated with the design of concrete structures, the application of masonry materials, and the production, placement and quality control of all concrete used.

In addition to chemical analyses and tests performed on a wide range of materials and products purchased, chemical research work is conducted with regard to such subjects as wood preservation, plastics applications, protective coatings, brush and weed control, lubrication, liquid electrical insulants, water treatment, thermal insulation, and corrosion prevention.

Other studies contributory and supplementary to the main branches of work are carried on in the fields of physics, biology, meteorology, petrology and mathematics.

The Pulp and Paper Research Institute of Canada.—Because so much of the Canadian economy is dependent upon pulp and paper, the need has long been recognized for research on cellulose chemistry and other technologies associated with the use of cellulose. In 1913 the Federal Government established the Forest Products Laboratories in Montreal. Its Pulp and Paper Division began to receive support from the pulp and paper industry in 1925 and soon after started to work closely with the Chemistry Department of McGill University. The present building on the University grounds was opened in 1929 to provide increased accommodation and facilities for its expanding activity in pulp and paper research. In 1950, the Institute became an independent corporation under federal charter, administered by a Board of Directors consisting of appointees from McGill University, industry, and the Federal Department which is now Northern Affairs and National Resources.

This Corporation has taken over the building it occupied on the University grounds, together with all its equipment—the land remains University property and is lent to the Corporation. The Corporation has complete control of the operation, subject to the provision that work leading to degrees will be under the control of the appropriate faculties of the University.

McGill's entire Division of Industrial and Cellulose Chemistry and part of the Division of Physical Chemistry form integral parts of the Institute; to some degree, the Institute has also become the bureau of standards for the pulp and paper industry.

Numerous contributions to the fundamental knowledge of the chemistry of cellulose and lignin, the chemical and mechanical pulping of wood, the behaviour of fibres in water, and the testing of pulp and paper have been made by Institute personnel. At present, studies in physical chemistry are being conducted mainly on the surface chemistry and swelling of cellulose, and the flocculation of suspensions of fibres, while research in organic chemistry is being carried out on the reactivity of cellulose, the properties and constitution of cellulose derivatives, and the chemistry of lignin and of bark. Much work is also being done on the various methods of producing chemical pulp.

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

Agriculture, including stock-raising and horticulture, is the most important of the primary industries of the Canadian people, employing, according to the Census of 1951, 15·6 p.c. of the total labour force and 19·2 p.c. of the labour force males. In addition, agriculture provides the raw materials for many Canadian manufactures and its products in raw or manufactured form constitute a very large percentage of Canada's exports. The area of agricultural land is shown by province at p. 20 of this volume.

Section 1.—Federal Government in Relation to Agriculture*

The creation of the Department of Agriculture is provided for in Sect. 95 of the British North America Act (1867), which states, in part, that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada". As a result of this provision, there now exists a Department of Agriculture, with a Minister of Agriculture at its head, in the Federal Government and in each of the provinces except Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines and Resources.

---

* Except as otherwise indicated, this material was prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

Subsection 1.—General Policy and Price Stability

All the activities of the Department of Agriculture are directed toward the production of marketable farm products. Apart from the initial research and experimentation in connection with operations on the farm itself, it is essential that processing, grading and inspection of farm products should be of a high standard if markets both at home and abroad are to be retained and new ones developed. It is with this end in view that the inspection and grading activities of the Department have become of increasing importance. By inspection and grading the buyer is able to obtain a product suited to his requirements; the producer is compensated according to the grade of his product and is thus encouraged to produce a high-quality commodity.

The results of experimental and research work and the policies of the Department, in general, are made available to farmers and to the public through bulletins, the press, radio and screen. Releases on market conditions and prices are a regular feature of this publicity.

The Federal Government has passed a number of Acts designed to give price stability in marketing agricultural products. The most important of these is the Agricultural Prices Support Act, 1944, which permits the Federal Government to stabilize the price of any agricultural product, except wheat and coarse grains which are marketed under other legislation, by outright purchase or by underwriting the market through guarantees or deficiency payments. The following products have been supported under the Act when occasion arose: potatoes, apples, dried white beans, extracted honey, dry skimmed milk, creamery butter, shell eggs, cheess, hogs and cattle.

Another Act under which price support may be extended is the Agricultural Products Co-operative Marketing Act, 1939. Under this Act the Government assists in financing initial payments made by co-operatives to primary producers on delivery of the products for sale. Initial payments are subject to negotiation between co-operative and government but may not exceed 80 p.c. of the average returns for like grades and qualities during the previous three years. The procedure is for the Government to guarantee banks against loss in advancing funds to co-operative organizations with whom agreements have been signed. The legislation has been used extensively by co-operatives, and agreements through the years have covered onions, potatoes, corn, many seed crops and ranch-bred fox and mink pelts.

There is a third piece of federal legislation that has a bearing on price support. A number of provincial governments have legislation providing for the establishment of a Board to regulate or control the marketing of agricultural products sold within the province concerned. Under the British North America Act, a provincial government cannot legislate with regard to products marketed outside the province or in export trade. Under the Agricultural Products Marketing Act, 1949, the Federal Government may, at discretion, permit such marketing legislation to be applied in whole or in part to the marketing of agricultural products outside the province concerned and in export trade.

Under the Agricultural Products Board Act, 1951, the Board may buy, sell, export and import agricultural products when directed by the Governor in Council.

Farm Credit.—The Federal Government has made provision for the extension of credit to farmers under the Canadian Farm Loan Act and under the Farm Improvement Loans Act. The Prairie Grain Producers' Interim Financing Act, 1951, was emergency legislation intended primarily to relieve any hardship caused by the extremely unfavourable harvesting conditions of that autumn.

*The Canadian Farm Loan Act, 1927.**—Long-term farm mortgage credit is made available to Canadian farmers under the provisions of this Act, which is administered by the Canadian Farm Loan Board. The Board makes loans for the purchase of live stock, farm equipment and farm land, for improvements, for refinancing debts and for covering operating expenses. The Board also provides short- and intermediate-term credit to its long-term mortgage borrowers by means of five-year second mortgages with collateral chattel security.

The Canadian Farm Loan Act was amended on June 18, 1952, to permit the Board to lend up to 60 p.c. of appraised value on first mortgage and up to 70 p.c. on combined first and second mortgage with the maximum first-mortgage loan limited to $10,000 and the maximum of first- and second-mortgage loan limited to $12,000. In the year ended Mar. 31, 1953, a total of $5,852,300 was approved for loans. This was 38 p.c. higher than the previous year, largely attributable to the wider field of operations resulting from the changes in the Act.

Principal assets under administration increased by $1,724,106 during the year to $31,588,657 at Mar. 31, 1953, the highest figure for 10 years.

---

*The Farm Improvement Loans Act.**—The Farm Improvement Loans Act, administered by the Department of Finance, is designed to provide intermediate-term credit and a type of short-term credit for farmers to enable them to equip, improve and develop their farms. There is scarcely anything a farmer wants in the way of mechanical aids for his farm operation or for his home for which a loan may not be made. Assistance may also be obtained for the purchase of live stock, principally foundation or breeding stock; for installation or repair of farm electric systems; for repair, alteration or construction of farm buildings, including the home; and for fencing, drainage and other development projects. Credit is provided on security and terms that are convenient and suited to the individual borrower.

The chartered banks are the lending agency under the Act. The legislation, originally operative for three years, 1945-47, has been extended from time to time for three-year periods. The Federal Government guarantees each bank against loss up to 10 p.c. of the total loans made by it during the period. Under the Act, the guarantee is limited by a provision stating that it will not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. When, in February 1951, the Act was extended for another three years, the amount fixed was $200,000,000. Within two years the loans almost totalled this amount, and a further extension of the Act was made for three years from Apr. 1, 1953. The aggregate of loans for this three-year period, affected by the guarantee, is set at $300,000,000. By Dec. 31, 1953, 175 claims amounting to $90,771 had been paid under the guarantee.

Loans may be obtained for terms up to 10 years with interest not to exceed 5 p.c. The maximum amount to be advanced to a borrower, at any one time, was increased to $4,000 by the legislation of 1953. The borrower himself must provide from 10 p.c. to 40 p.c. of the cost of his project.

By Dec. 31, 1953, $313,403,652 or 69·4 p.c. of the total of all loans made had been repaid. Of the loans made during the first three years of operation, all but 0·4 p.c. had been repaid; of those made during the second three years, all but

---

2·8 p.c. had been repaid; of those made during the next two years, all but 32·5 p.c. had been repaid; and for the nine months of the fourth period ended Dec. 31, 1953, 15·1 p.c. of the loans made had been repaid.

3.—Loans made under the Farm Improvement Loans Act, by Purpose, 1945-53

Purpose	1952		1953		Total Loans Since Inception in 1945

Prairie Grain Producers' Interim Financing Act, 1951.—This Act, which came into force Jan. 15, 1952, provides short-term credit to grain producers in the Prairie Provinces who, because of congested delivery points or inability to complete harvesting of their grain, are in need of credit until their grain can be delivered. Individual advances can be made to a maximum of $1,000.

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939 and administered by the federal Department of Agriculture, provides for direct money payments by the Federal Government, on an acreage basis, to farmers in areas of low crop yields in the Prairie Provinces and the Peace River District of British Columbia. The Act was designed to assist the municipalities and provinces, in years of crop failure, to meet relief expenditures which would normally be too great to be assumed by them. The Act provides that payments be made to farmers under certain conditions and terms and, in order that Federal Government costs may be defrayed to some extent, it is required that 1 p.c. of the purchase price of all grains (wheat, oats, barley and rye) marketed in the Prairie Provinces be paid to the Federal Government and set aside in a special fund for the purposes of the Act.

If the farmer, who may be an owner, a tenant, or a member of a co-operative farm association engaged in farming, is located in a crop-failure area, he may be awarded assistance on not more than one-half of the cultivated land or a maximum of 200 acres. The rates of payment range up to $2.50 per acre.

From the inception of the scheme to Mar. 31, 1954, the total amount paid out under the Act was $146,105,574. The amount collected under the 1-p.c. levy to Feb. 28, 1954, was $79,708,145.

Subsection 2.—Agricultural Research and Experimentation

The Department of Agriculture conducts, on a broad scale, scientific research and experimentation on the control of pests and diseases, the nutritional requirements of plants and animals, the breeding and testing of new species and varieties, the micro-biology of soils and foods, investigations of crop production and cultural methods, and many other matters. This work is carried on mainly by the Science Service and the Experimental Farms Service and, in addition to providing information on current production problems, is of paramount importance to the long-time well-being of agriculture.

Conservation of the soil is of basic importance to agriculture and research in the form of soil surveys and study of methods for the protection and conservation of soil resources is carried on by the Department in collaboration with the provincial governments. Studies include the chemistry of the soil, cover crops, value of manure and fertilizers, cultural methods, use of tillage machinery and development of large land-reclamation projects.

The Department has for many years conducted investigations into the control of insects and diseases of forest trees. The limited silvicultural work carried on has aimed at maintaining a supply of trees suitable for planting on the prairies as shelter belts against the wind and to prevent soil and snow drifting. Basically, this is also a soil-conservation measure.

Much of the research and experimental work is concerned with crop plants for, after the soil itself, they are of chief importance. This work includes the breeding and testing of suitable varieties of crops to be grown under the varying climatic conditions throughout Canada. The culture and nutritional value of crop plants and the suitability of food crops for human consumption—even their appeal or lack of appeal to a somewhat discerning housewife—are continuously under study.

Work on live stock includes mainly the feeding, care and handling of stock, its protection from insects and diseases, and the production of suitable market and breeding types. A limited amount of work has also been done on the production of new strains of animals.

Research and study of processed products such as milk, butter, cheese and meat, and of fruits and vegetables is a most active item in the scientific work of the Department. Storage of agricultural products creates many problems that call for constant study.

Chemical and biological research and experimentation is mainly of an applied nature. That is, the Department does not specialize in so-called fundamental research involving the discovery of basic scientific phenomena and laws, but concentrates on the adoption of known processes and the application of such processes to specific aims. Some discoveries bordering on fundamental research, however, are occasionally made, and it is also found necessary to extend to some degree into the basic field where certain information is lacking in applied science.

Agricultural research, particularly in plant science, must be decentralized to a great extent for most problems must be studied where they occur. Apart from the value to farmers of having a local source of information, the experimental farms and science laboratories are widely distributed because the work can be done in no other way. In addition to the headquarters of the Experimental Farms Service at Ottawa, work is carried on at 28 branch experimental farms and 20 substations. Experimental work of local application is done at 162 illustration stations, 54 district substations and 11 fox and mink illustration stations. The work of the Science Service, centralized at Ottawa, is also augmented by that of about 100 laboratories located throughout the country.

In the field of economic research, studies in farm management, land utilization, marketing and farm-family living are undertaken in all parts of the country. The scope of the scientific and experimental work of the Department is revealed when it is realized that there is no plant or animal in Canada that is not susceptible to damage by disease caused by bacteria, fungi or viruses, or subject to attacks by insects or, in the case of animals, by internal parasites.

Subsection 3.—Protection and Grading

Unlike manufactured articles, even close scrutiny of most agricultural products is no clue to their purity as food, or to their value to the farmer for further production. Obviously, products that are eventually used as food must be pure and healthful and must come up to standards of quality established for them. On the other hand, if agriculture is to be conducted on a sound basis, the supplies farmers buy—seeds, feeds, fertilizers and pesticides—must also carry some guarantee that they will be as represented. Much of the research and experimental work would be of no avail if legislation were not provided to see that the end-product of such work was satisfactory. In addition, Canada's live stock, crops and trees must be protected from diseases that might be introduced with importations or that might originate in Canada.

These protective and grading services are a most important part of the work of the Department of Agriculture. They come under two sections, the Production Service and the Marketing Service, and the necessary authority is gained from about 20 Acts or their regulations. Generally, the protective features and the grading to standards or approval of analyses of farm supplies come under the Production Service. The grading of most food products is the responsibility of the Marketing Service.

Health of Animals.—The protection of the health of Canada's live stock is a most important service. To guard against the introduction of contagious diseases from foreign lands, stringent regulations are enforced by the Health of Animals Division covering the importation of live stock, live-stock products and even packing material and litter. Provision is also made for the control or eradication of animal diseases developing within Canada. Programs directed at the eventual eradication of such diseases as bovine tuberculosis and brucellosis are a continuing part of the work. The Division is responsible for the inspection of animals slaughtered for food, and post-mortem examination is made of all carcasses in the course of slaughter and dressing before the meat is approved for human consumption. Sanitary conditions in packing plants and slaughter houses come under review and all canned meats must meet high standards of processing to qualify as food.

Protection of Supplies.—The Plant Products Division, in co-operation with the provinces and other agencies, is concerned primarily with the administration of Acts respecting feeding stuffs, fertilizers, pesticides, hay and straw, fibre flax and binder twine, and the production of seed. The inspection services of the Division have three main functions: (1) to enforce the Acts that regulate the sale of the agricultural supplies; (2) to provide, as required, such services as seed-crop inspection and the sealing of seed produced from inspected and other approved crops; (3) to co-operate with provincial governments and other agencies in promoting and improving supplies of seeds, feeds, fertilizers and pesticides.

Visual inspection is of little value for most of these products and laboratory testing is necessary; the laboratory services of the Division maintain branch offices across Canada. Testing of seeds is a complex matter, for they must be tested for germination, variety, purity and freedom from weeds and other kinds of seeds before they are graded. All feeding stuffs, fertilizers and pesticides are subject to registration, and this is refused if the use of products would be dangerous, if the ingredients or analyses are unsatisfactory, or if the claims made regarding their value are incorrect or misleading.

Plant Protection.—The Division of Plant Protection functions with regard to plants and plant products much as the Health of Animals Division does with animals, and administers the Destructive Insect and Pest Act. Imported nursery stock and plant material are all subject to inspection as protection against the introduction of insects and diseases. Extensive inspection is maintained within Canada to identify, localize and exterminate dangerous enemies of crops and trees. Provision is also made for the inspection of potato crops to be used for seed, for domestic and export markets, and for the issuance of health certificates required for a wide range of plant products.

Standards and Inspection.—The Department has been steadily establishing and improving standards of quality for agricultural products for 50 years or more. This work originated in an effort to improve the quality of export commodities and has gradually extended to include many products that move in interprovincial trade. Most of the provinces have adopted these standards for enforcement within their respective areas on products marketed inside the province.

Grade standards are established and enforced for dairy products, meats, eggs and poultry, fresh and processed fruits and vegetables and seeds. Grade standards are widely recognized outside Canada and many Canadian foods and agricultural products command premium prices because of the strict quality standards maintained.

Dairy Products.—Producers, processers and consumers all derive benefits from grading and inspection services of the Dairy Products Division. Authority to carry out such services is contained in the Canada Dairy Products Act which established national standards for dairy products and regulates interprovincial and international trade. Grade names and standards have been prescribed for cheddar cheese, creamery butter and dry skimmed milk and each of these products must be graded before entering into interprovincial or international trade. Dairy products for which grade names have not been established, such as ice cream, evaporated milk and process cheese, are required to meet prescribed standards for composition, packing and marking before being exported from Canada, imported into Canada or moved from one province to another. Authority to carry on the grading and inspection of dairy products made and sold within the province of origin is derived from legislation passed by the province concerned. Nine provinces have either passed or are preparing to pass legislation concurrent with that contained in the Canada Dairy Products Act and Regulations thereunder.

Meats.—In addition to the approval of carcasses for human consumption, inspection and grading of meats is of importance. All hogs marketed at stockyards and plants are rail graded, that is, the farmer is paid on the dressed weight and quality of the carcass. Export bacon is inspected as well as other export meat and meat products. The better grades of beef are marked according to standards of Choice and Good beef, making them eligible for marketing as Red and Blue brands, respectively. Lamb carcasses are graded on an optional basis and wool is inspected and graded in some 26 registered wool warehouses.

Eggs and Poultry.—Registered egg-grading stations are the basic units in the grading and packing of eggs; registered poultry-processing and eviscerating stations are the basic units in the processing, eviscerating, grading and packing of poultry; and registered egg-breaking stations are the basic units in the processing, grading and packing of frozen egg products. There are 1,280 egg-grading stations, 290 processing and eviscerating stations and 37 egg-breaking stations. Over the last few years because of a rapidly increasing demand for eviscerated poultry the quantity processed in registered processing and eviscerating plants increased—from approximately 4,000,000 lb. in 1950 to about 26,000,000 lb. in 1953.

Inspection of eggs, poultry and frozen egg products is compulsory on all sizable quantities intended for export. Inspection is compulsory for interprovincial shipments of poultry of 10,000 lb. or over. These products are also check-inspected periodically for grade when offered for wholesale and retail sale. The sale of eggs by grade, at retail, is compulsory throughout Canada, and the sale of poultry by grade, at retail, is compulsory in many of the larger consuming centres.

Fresh Fruits and Vegetables.—Grades are established for all principal fruits and vegetables produced in Canada. Practically all products for which grades are established must be inspected and certified if for shipment out of Canada. In addition, inspection and certification is compulsory on specified products if produced in certain provinces and shipped to another province. To provide this service, mostly seasonal in nature, a staff of inspectors is maintained throughout the principal producing areas across Canada. In the larger distributing centres an inspection staff is maintained to administer grading, packaging and marking regulations at the wholesale and retail level, to collect and compile market statistics and to provide, on request, a commercial inspection service covering the quality or condition of produce received by the wholesaler. The shippers, brokers, commission houses and wholesalers dealing in fruits and vegetables in interprovincial, export or import trade must be licensed and are subject to established regulations.

Processed Fruits and Vegetables.—When special regulations covering canned fruits and vegetables were established under the Meat and Canned Foods Act in 1907, Canada became the first country to have any such legislation. Regulations under the Meat and Canned Foods Act now establish grades for practically all canned, frozen or dehydrated fruits and vegetables as well as for jams. Sanitary regulations are also established and are enforced by a staff of inspectors who provide an inspection service covering interprovincial, export or import movement of processed fruits and vegetables. This movement constitutes about 98 p.c. of the entire industry in Canada the sales value of which now amounts to approximately $250,000,000 as compared with $20,000,000 in 1919. Although no grades are established in the regulations, the processing and packing of such products as pickles, olives, vegetable soups, etc., is also supervised and controlled. About 560 processing plants of one kind or another operate under a Certificate of Registration issued by the Department of Agriculture.

Honey.—Regulations are established for the classifying, grading and marking of all honey moving in interprovincial or export trade. Inspection is compulsory on honey being shipped out of Canada and administrative inspections for class and grade are made at the wholesale and retail levels on the domestic market. Interprovincial and export shippers and packers of pasteurized honey must be registered with the Department of Agriculture.

Maple Products.—Regulations are established for the prohibition of adulteration of maple products, for inspection and analysis, for proper identification of maple products and of 'colourable imitations' and for the licensing of manufacturers or packers and of all sugar-bush operators operating in the interprovincial or export market. To enforce the regulations, periodic inspection is made of the manufacturing plants, markets, stores and restaurants.

Subsection 4.—Canada's Relationship with FAO

Canada continues its active co-operation in the work of the Food and Agriculture Organization of the United Nations (FAO). At the Seventh Session of the Conference, held at Rome in December 1953, a new Director General, Dr. P. V. Cardon of the United States, who has been with the organization since its early days, was appointed to succeed Mr. Norris E. Dodd. Dr. G. S. H. Barton, formerly Deputy Minister of Agriculture for Canada, was re-elected to the seven-member Co-ordinating Committee which advises the Director. Canadian representatives were also elected to the Council, which meets at least twice a year, and to the Committee on Commodity Problems. Seventy-one nations are now members of the Organization.

The organization and objectives of FAO have been explained in earlier editions of the Year Book. In short, the chief aims are: to help nations raise their standard of living; to improve nutrition of the people of all countries; to increase the efficiency of farming, forestry and fisheries; and through all these means to widen the opportunities of all people for productive work.

FAO does not have the funds or authority to buy and distribute food, supply fertilizers and farm machinery, or build and staff laboratories. It works in three effective ways in assisting member nations: by over-all statistical study of world food supplies and requirements and by supplying information requested by member nations; by sending experts to work with scientists and technicians of member governments who ask for help—special missions are sent to countries requesting them; and by making definite recommendations for concerted action and providing a means by which nations may work together on programs and carry them out.

Technical assistance embraces numerous problems of agriculture, simple as well as complex. In many backward countries, for example, the introduction of scythes (to replace crudely made sickles), hoes and other simple hand tools has meant more food for those who must depend almost entirely on tilling the land for their needs. As the farmers become adept with these tools, more advanced equipment can be introduced. In more advanced countries the problems are different and advice and assistance is sought on practically all phases of the industry, from the soil itself to the storing, marketing and financing of the finished product.

Because the Organization is essentially international, the Headquarters staff at Rome is cosmopolitan. For the same reason a technical mission may be composed of officials drawn from different member countries, but all are experts in the particular branch of agriculture upon which they are asked to advise. A number of Canadians are included on FAO Headquarters staff and during 1954 Canadian specialists served in Afghanistan, Ceylon, Chile, Egypt, Ethiopia, Finland, Haiti, India, Iraq, Korea, Malaya and Pakistan. Canadian universities and federal and provincial government departments have assisted in FAO's Expanded Technical Assistance Program by training a number of Fellows and scholars.

Section 2.—Provincial Governments in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines and Resources.

The Division maintains an extension service and encourages agricultural development by the payment of bonuses on the purchase of pure-bred sires and for the clearing of land; by assistance with agricultural exhibitions and the payment of a subsidy on agricultural limestone. Each year several scholarships are awarded young men enabling them to take a two-year degree course in agriculture. Government policy relating to the clearing of land for agricultural purposes, with government-owned tractors, is administered by the Land Development Division of the Department.

Prince Edward Island.—The Department of Agriculture is presided over by a Minister assisted by a Deputy Minister, a Dairy Superintendent and Assistant Dairy Superintendent, a Pathologist, a Director of Veterinary Services, five subsidized practicing Veterinarians, a Soil Analysis Assistant, a Poultry Director, an Agronomist, three Field Representatives, a Director and Assistant Director and two extension workers of Women's Institutes.

Nova Scotia.—The Nova Scotia Advisory Committee on Agricultural Services was established a few years ago to further the effective prosecution, within the Province, of agricultural policies and projects of the Federal and the Provincial Departments of Agriculture.

The main purpose and function of the Committee, which meets quarterly, is to determine ways and means by which the purposes of both Departments of Agriculture may best be served, and how the work of those Departments may be co-ordinated and directed through integrated agricultural policies and with a minimum duplication of services.

Every effort is made by the Department of Agriculture and Marketing to "help the people to help themselves" through strengthening member-interest in such organizations as the Nova Scotia Federation of Agriculture, Nova Scotia Fruit Growers' Association, through various agricultural co-operative organizations, credit unions and several producer-organizations.

---

* Information supplied by the agricultural authorities of the various provinces.

New Brunswick.—Provincial Government policy concerning agriculture in New Brunswick is directed by the Department of Agriculture. This Department has as its head the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following services: extension, live stock, dairy, veterinary, poultry, horticulture, field husbandry, soils and crops, plant protection and promotion, agricultural engineering, home economics, Credit Union Co-operative Association, agricultural education, apiculture, and agricultural societies.

Quebec.—The Department of Agriculture of Quebec comprises eleven services: rural education, rural economy, extension, animal husbandry, horticulture, field husbandry, information and research, home economics, animal health, rural engineering and the secretariat. Each service is divided into sections dealing with particular problems.

The Department also includes many other special organizations such as the Research Council, the Dairy Industry Commission, the Dairy School of St. Hyacinthe, the Provincial Extension Farm (Deschambault), the Fur Bearing Animals Extension Farm (St. Louis de Courville). The Farm Credit Bureau, the Quebec Sugar Refinery (St. Hilaire) and the Veterinary College (St. Hyacinthe) are also under the authority of the Minister of Agriculture. The Office of Rural Electrification is connected with the Provincial Executive Council.

The annual competition for the Agricultural Merit Order, organized in 1890, is held alternately in each of five regions. Each contest lasts five years and covers the different farm productions; the main objective is an economical increase in crop and cattle yields. County Farm Improvement Contests have been conducted for more than twenty years and are still very popular. Over 6,000 competitors have already benefited from these contests which promote better methods of culture designed to increase farm income. In 1953-54, another group of 200 farmers registered for these competitions.

Soil-improvement policies include large drainage projects carried out by the Department and smaller projects carried out by groups of farmers with government help. In the past five years, 500,000 acres of land have been improved or reclaimed and 400,000 acres of underground drainage have been completed. In 1954, 19,500 farmers will benefit from the work of this Service.

Various forms of assistance are offered towards improvement of crops and live stock. An artificial insemination station operates at St. Hyacinthe for the benefit of 34 breeders' clubs, and plant-breeding stations for cereal and forage crops, vegetables and small fruits are maintained in a number of localities. Trained specialists are employed in the work of controlling plant and animal pests and diseases; the main laboratories are situated at Quebec City and field laboratories are located in different districts or in schools.

Agricultural co-operation is widespread in Quebec. There are 650 co-operatives with 70,000 members and 90 agricultural societies with 29,000 members to serve local interests and organize county exhibitions. There are also 850 Cercles de Fermières (Women's Institutes) in operation with a membership of 48,000; 500 farmers' clubs with a membership of 23,000, and 140 junior farmer clubs where 3,450 young boys and girls are working on numerous practical agricultural projects.

The Farm Credit Bureau was established in 1936. During 18 years of operation, the Bureau has placed at the disposal of 36,000 farmers of Quebec a sum of $106,000,000 and has established 14,500 young men on farms.

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services to agriculture through its Head Office, 11 branches, three experimental farms, and through research and extension work carried on at the four educational institutions under its administration. In addition to general administration, the Head Office administers the policies providing assistance to farmers and settlers in northern Ontario in connection with land breaking and clearing, and with improving farms and live stock. (1) The Live Stock Branch promotes live-stock improvement policies, licenses and examines stallions and gives support to pure-bred live-stock associations; (2) the Field Crops Branch assists in the development of good cultural practices and promotes the use of improved strains of seed, the improvement of pastures, and the eradication of weeds; (3) the Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms; (4) the Farm Economics Branch conducts cost studies on agricultural production in co-operation with agricultural organizations; (5) the Fruit Branch enforces fruit and vegetable regulations, provides information to growers, and administers the Co-operative Marketing Loans Act; (6) the Co-operation and Markets Branch administers the Farm Products Control Act, the Ontario Food Terminal Act and the Farm Products Containers Act; (7) the Milk Control Board, under the Milk Control Act, regulates and supervises the marketing of fluid milk; (8) the Agricultural and Horticultural Societies Branch gives assistance to agricultural and horticultural fairs and exhibitions, plowing matches and other competitions, and administers the Community Centres Act; (9) the Agricultural Representatives Branch carries on an educational and extension service through agricultural representatives located in all counties and districts and gives direction to 4-H Club work and the Ontario Junior Farmers' Association; (10) the Women's Institute Branch and Home Economics Service gives leadership and direction to organized activities of rural women; (11) the Statistics and Publications Branch, in co-operation with the Dominion Bureau of Statistics, provides a crop-reporting service and gathers and disseminates data on crops, live stock and dairy products. The Horticultural Experiment Station at Vineland, the Western Ontario Experimental Farm and Agricultural School at Ridgetown, the Demonstration Farm at New Liskeard, the Kemptville Agricultural School, the Ontario Agricultural College and the Ontario Veterinary College at Guelph, all under the administration of the Department, provide research and extension services to Ontario agriculture.

Manitoba.—The Department of Agriculture serves Manitoba through the following branches: agricultural extension; live stock; dairy; soils and crops; agricultural publications and statistics; weeds administration; co-operative services; and the provincial veterinary laboratory.

The Extension Service deals with agronomy, horticulture, poultry, agricultural engineering, beekeeping, 4-H Clubs and women's work, and has specialists devoting their attention to these subjects. Meetings, field days and short courses are held. There are 31 agricultural representatives located throughout the Province, each representative serving from one to five municipalities. Six home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of live stock, and works in close co-operation with the Veterinary Laboratory Service and the Federal Health of Animals Division in the control of live-stock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese- and butter-making, issues licences to makers of dairy products and to cream graders and conducts a dairy-cost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy-farm problems.

The Soils and Crops Branch deals with grain and forage crops conservation and fertility and provides liaison between the Province of Manitoba and the Government of Canada in regard to PFRA projects. The branch develops and administers policies that encourage good field-crop husbandry and conservation practices.

The Agricultural Publications and Statistics Branch publishes and distributes, annually, approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 18 municipal weed-control units comprising 70 rural municipalities engaged in eradicating deep-rooted, persistent perennial weeds; supervises weed demonstrations; investigates weed problems; conducts weed surveys; and prepares weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. The Branch also collects and compiles statistics on co-operative activity throughout the Province. The Director is Secretary of the Co-operative Promotion Board.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and live-stock owners.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized as follows. (1) The Administration Branch includes the Accounting Division handling staff records, accounts and vouchers and mail assembly; the Agricultural Records Division, handling records particularly of agricultural and horticultural societies; the Statistics Division, which, in co-operation with the Dominion Bureau of Statistics, collects data on crop conditions, production, marketings and income; and the Radio and Information Division which broadcasts farm information daily over seven private stations. (2) The Agricultural Representative Service has a field staff of 37 agricultural representatives, four area supervisors and specialists in farm mechanics and visual aids. The Farm Labour Division co-ordinates farm labour requirements and services with federal agencies. The Service provides an extension field staff for all Branches of the Department as well as for the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services. In farm labour matters, co-operation is maintained with the federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the Province. Agricultural representatives work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with the scientific and practical information necessary for improvement in agriculture. Agricultural committees are instrumental in studying local farm problems and in initiating agricultural improvement programs. These programs are encouraged through an Earned Assistance Program under which the Department pays one-half the costs of local group development projects. (3) The Animal Industry Branch includes four divisions. The Dairy Division administers dairy herd improvement programs and assists producers with management and production problems; inspects and licenses dairy manufacturing and frozen-food locker plants; and administers dairy, locker-plant and margarine legislation. The Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of pure-bred sire areas and by assistance in the purchase and distribution of stallions, bulls, boars and rams. It registers brands, licenses live-stock dealers and agents and promotes programs on insect control, feeding and management. The Poultry Division maintains flock-testing and turkey-grading services; administers an approved hatchery policy, licenses produce dealers and poultry buyers, hatcheries and hatchery agents. It also assists with poultry shows and field days and otherwise promotes flock improvement. The Veterinary Division assists students in veterinary science under a scholarship plan, administers disease-testing and vaccination programs and co-operates with Federal Government officials and local veterinarians in disease prevention and control. (4) The Conservation and Development Branch is responsible for the engineering services extended by the Department, for irrigation development usually in co-operation with the Federal Government, and for drainage programs and projects. Reclamation of land by drainage, development of misused land and under-utilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch administers the Farm Implement Act and provides engineering assistance to conservation and development areas, water users' districts, and irrigation districts in connection with water-control projects. (5) The Lands Branch administers all Crown, school and Land Utilization Board lands except forest reserves and parks in the settled area of the Province; classifies it according to the use for which it is best suited; disposes of such lands under long-term leases; collects rental for land under disposition; secures land control for land-utilization projects, including the purchase and exchange of lands and Crown lands; supervises new settlement projects including land improvement by the Department and by lessees and operates provincial community pastures. (6) The Plant Industry Branch organizes and administers programs for crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, weed control and management of irrigated land. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production, and carries on continuous inspection for American foul brood and supervises grading.

Alberta.—The Alberta Department of Agriculture is organized as follows. (1) The Field Crops Branch deals with all matters that pertain to the utilization of soil and the production of crops. A Commissioner of Field Crops and four Supervisors administer programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, and horticulture. Agricultural Service Boards of municipalities carry out programs and administer regulations for which the municipality is made responsible by provincial legislation; the Department is represented on each Board. (2) The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing pure-bred herd sires and by maintaining an artificial insemination laboratory. The work of the Branch includes the supervision of live-stock feeder associations and the administration of legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle. (3) The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as well as standards of construction, manufacture, processing, sanitation and temperature control for dairies and frozen-food lockers. A regular cow-testing service is available to dairy producers and the Branch laboratory provides facilities for chemical and bacteriological analyses needed for industrial directives. Yearly cost studies and dairy-farm management services are operating in the principal milk-producing areas. (4) The Poultry Branch carries on programs for the improvement of poultry husbandry, supervises flock approval for the control of pullorum disease, maintains a practical poultry-breeding plant for the distribution of breeding stock and issues all hatchery, wholesale, first receiver and truck licences for the handling of poultry products. (5) The Veterinary Services Branch provides the scientific diagnosis of live-stock and poultry diseases through its laboratory; conducts investigations of disease conditions; gives lectures in veterinary science at the University of Alberta, Schools of Agriculture, and a large number of meetings; and actively promotes government policies aimed at reducing disease losses throughout the Province. (6) The Apiculture Branch administers the Bee Diseases Act which requires the registration of all beekeepers and the maintenance of an inspection service; it also administers the regulations on honey grading. The Branch carries on a considerable amount of general educational work. (7) The Agricultural Extension Service operates 42 offices and employs the services of 45 district agriculturists and 15 district home economists. The district agriculturists work with the farmers, assisting with their problems, and with departmental policies designed to improve the standard of agricultural practices; the district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics and weekly farm notes are prepared for distribution to the press. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the Federal Department of Labour, is concerned with recruitment and placement of farm labour. (8) The Fur Farm Branch administers the licensing and exporting of live animals and pelts, assists fur farmers with problems pertaining to care and management and stock improvement, and operates a vaccine distemper assistance plan to control disease. (9) Schools of agriculture and home economics are operated at Olds, Vermilion and Fairview (*see* p. 390). (10) A Radio and Information Branch, established on Apr. 1, 1953, provides a radio program consisting of five broadcasts a week over six Alberta stations.

British Columbia.—The Department of Agriculture has four main divisions. (1) The Administrative Division is responsible for the general direction of agricultural policies, administration of legislation affecting agriculture, supervision of extension programs, collection of agricultural statistics, compilation of reports and publications, preparation of material for agricultural exhibitions, supervision of farmers' and women's institutes, as well as the carrying out of soil surveys in various sections of the Province. (2) The Animal Industry Division consists of general live-stock, veterinary, dairy and poultry branches and supervises the promotion and improvement of animal production, fur farms, brand inspection, inspection of beef grading, control of contagious diseases of animals, eradication of insect pests detrimental to live stock, and field extension connected with animal nutritional work. (3) The Plant Industry Division includes horticulture, field-crop, plant pathology, entomology and apiculture branches and supervises fruit, vegetable and seed production and surveys dealing with orchards, small fruits, flowering bulbs and greenhouse areas; also the suppression of insect pests, plant disease inspection with control of noxious weeds and general promotion of crop production. In addition, there are field officials in 12 of the principal fruit and vegetable producing areas who undertake extension work on behalf of field crop, fruit and vegetable producers. (4) The Agricultural Development and Extension Division includes field-extension work through the district agriculturist service, clearing agricultural lands for production, agricultural engineering, farm labour supply, and junior club projects. Extension Division officials of the Department are located in 32 agricultural centres throughout the Province.

Subsection 2.—Agricultural Colleges and Schools

All provinces, with the exception of Newfoundland, provide facilities for training in agricultural science at university level. Such colleges are administered by either the Department of Agriculture or the Department of Education of the respective provinces.

Prince Edward Island.—The two-year course in scientific agriculture offered at Prince of Wales College is designed for students preparing to enter third year at Macdonald College, Que. The course is started every second year.

In the Vocational School, the short courses offered in agriculture are planned to provide not only knowledge and skill but to develop in the student a sense of the dignity and importance of agriculture as a vocation and an understanding of the importance of the industry to the Province.

Nova Scotia.—Nova Scotia Agricultural College at Truro offers three courses: the first two years of a course leading to the degree of Bachelor of Science in Agriculture; a two-year course in general agriculture; and a two-year course in vocational agriculture. In addition, the College assists in conducting short courses at various provincial centres, supports Folk Schools and gives leadership and direction to the 4-H Club organization. Tuition is free for students of the Maritime Provinces.

New Brunswick.—The Province's four Agricultural Schools are located at Woodstock, Fredericton, St. Joseph and Edmundston. Two-year agricultural courses extending over five months each year are offered at St. Joseph, Fredericton and Edmundston and at Woodstock a three-year course is conducted. The curriculum includes training in all phases of agriculture, shop and general academic work. Home economics courses of 10 months are offered at Woodstock and St. Joseph in conjunction with the agricultural courses.

Quebec.—Courses in agricultural schools in the Province include a four-year university course leading to a degree of Bachelor of Science in Agriculture at the following universities: Laval Faculty of Agriculture (Ste. Anne de la Pocatière); L'Institut Agricole d'Oka (affiliated with the University of Montreal); and McGill Faculty of Agriculture (Macdonald College). At the Provincial Veterinary School (St. Hyacinthe), affiliated with the University of Montreal, a four-year course is offered leading to a degree of doctor in veterinary medicine. There are also nine secondary agricultural schools throughout the Province, 10 regional schools and six orphanages offering courses in agriculture. More than 1,500 students, the great majority of whom are sons of farmers, attend these intermediate and regional schools of agriculture, and in the orphanages 200 pupils follow practical agricultural courses. A farm is always annexed to the school for practical training and specialists give instruction on the maple-sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing and silviculture. School co-operatives and clubs are organized and directed by the pupils, under the supervision of their professors. Household science training for the daughters of farmers and settlers is given in five of these schools. During the summer of 1953 nearly 400 girls attended these courses which extend over the four summer months of two consecutive years.

Ontario.—The two-year course of the Ontario Agricultural College for the Associate Diploma in Agriculture is planned to provide basic training of personnel in agriculture. Young persons interested in making agriculture their vocation study the application of science to agricultural practice and also receive training for rural citizenship.

The four-year course for the degree of Bachelor of Science in Agriculture is designed for fundamental education in the science of agriculture. A sound training is provided for farming as a profession, for entrance into government extension and allied agricultural services, agricultural industry, teaching, and for those who wish to proceed to graduate studies for the Master's and Doctorate degrees.

Graduate courses are also offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research, or further post-graduate study for a Doctorate degree.

The Ontario Veterinary College offers a course leading to the degree of Doctor of Veterinary Medicine. The course is five years in length with two four-month periods of regulated summer internship. In addition to its function as a teaching institution, the College is a centre for research into the diseases of animals and provides free consultation for veterinary surgeons in practice as well as extension services in the interests of the live-stock industry.

The Kemptville Agricultural School offers diploma courses in the following subjects:—

(1) A two-year diploma course in agriculture (two terms of six months each) giving practical training in modern farm methods designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture. Stress is laid on the development of community leadership. A 300-acre school farm and residence life are features of the Kemptville Agricultural School. (2) A one-year diploma course (six-month session) leading to a diploma in homemaking and qualification for the less exacting positions in fields of home economics. (3) A two-year diploma course (two terms of six months each) for girls wishing to prepare for positions in the tourist trade, food services, sewing centres and other fields of home economics. (4) A three-month winter course for all dairy apprentices leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants.

Western Ontario Agricultural School offers a practical course intended for young men who propose to return to farming. It consists of two winter courses of 20 weeks each, starting late in October and ending late in March. All subjects relating to agriculture are included in the curriculum.

Manitoba.—The Faculty of Agriculture and Home Economics of the University of Manitoba offers degree courses in agriculture and home economics as well as a two-year, sub-collegiate diploma course in agriculture. Practical one-season courses in agriculture and homemaking are also given at the Brandon Agricultural and Homemaking School. Graduates in agriculture from this School are admitted to the second year of the diploma course at the University.

Saskatchewan.—The University of Saskatchewan offers a degree course in agriculture for those who intend to teach agriculture in secondary schools or colleges, to engage in research or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Post-graduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men to become rural leaders.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and in home economics requires at least five years.

Alberta.—The University of Alberta offers a four-year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the Master level is offered in all departments and at the Doctorate level in some.

The Alberta Schools of Agriculture and Home Economics, located at Olds, Vermilion and Fairview, offer practical two-year courses in agriculture and homemaking. The purpose of the schools is to train young men for farming and young women for homemaking.

The regular course in agriculture and in home economics requires two terms, each extending from late October to early April. A special two-in-one course of one term is offered to students who have completed 70 high-school credits. These schools accept students who have reached 16 years of age. There are no academic requirements for regular students, although Grade VIII is desirable, and no tuition fees for residents of Alberta. Living accommodation is provided in modern dormitories with dining-room, auditorium and gymnasium facilities.

During the summer months the schools are used for agricultural meetings and conferences of organizations that are connected with agriculture. During the month of July, leadership courses, 4-H club gatherings, farm camps and other events keep the facilities in constant operation.

British Columbia.—The Faculty of Agriculture at the University of British Columbia offers a four-year general degree course in agriculture and a five-year honours course. In the honours course there are 15 different fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the Doctorate level. The Faculty also offers a one-year or two-year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

Section 3.—Agricultural Irrigation and Land Conservation

Subsection 1.—Federal Projects*

PRAIRIE FARM REHABILITATION ACT

The Prairie Farm Rehabilitation Act is a rehabilitation program conceived by Parliament in 1935 to meet the problems of drought and soil drifting adversely affecting agriculture on the Canadian prairies. Existing agencies of the Government of Canada were assisted, with PFRA funds, to expand their activities in providing leadership in the immediate drought problems. In particular, cultural investigations were carried out by the Experimental Farms Service to ensure the most economic use of the limited supply of soil moisture for crop production and the prevention of soil drifting farm lands that were a menace to surrounding good land. A program of water conservation to meet immediate needs was also initiated in 1935. Other services, such as the Economics Division, were assisted where special knowledge was required for rehabilitation measures.

The major activities of the PFRA Administration, with Headquarters at Regina, Sask., include the construction, for the Government of Canada, of all projects concerned with water conservation and land utilization in the Prairie Provinces. The five principal phases of investigational study in the field of engineering include surveys (exploration), soil mechanics, drainage, hydrology and design. These studies are undertaken by PFRA to gather the fundamental groundwork of technical and other basic information that is required before construction of any project is undertaken.

Water Conservation

Individual and Community Projects.—PFRA provides engineering and financial assistance to farmers in the construction of water conservation works within drought areas of the three Prairie Provinces as a rehabilitation measure. The amount of financial assistance awarded is largely dependent upon the type and size of the project contemplated. At all times PFRA policy, with respect to assistance provided, is to assist farmers to rehabilitate themselves. Authority to proceed with construction is first secured through the respective provincial water rights departments. Water conservation projects in this category are classified either as "individual farm projects" or as "community projects" undertaken by a group of farmers.

Individual Farm Projects.—During 19 years of operation, PFRA has provided assistance to farmers to construct 50,277 individual farm projects in the form of dugouts and small dams, many of which are suitable for irrigation. The objective is to provide adequate water-storage facilities where water shortages exist, and to assure dependable water supplies through irrigation for domestic requirements, for stock-watering and for the production of live-stock feed.

---

* Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, by G. J. Matte, Associate Director of Rehabilitation.

The construction of these projects has extended the benefits of water to all parts of the dry area: as a result, a much larger number of farmers have been rehabilitated than would have been possible through the construction of large schemes on well-defined watersheds and without the movement of settlers from their present holdings. The maintenance of valuable live-stock herds has been secured by assuring dependable water supplies on farm stock-watering projects and through the development of 90,000 acres of irrigated land on small irrigation schemes.

Community Projects.—The development of community projects is necessarily confined within the narrow reaches of well-defined watersheds where sufficient water resources are available. Where a group of farmers organizes a water-users' association or a rural municipality provides leadership in an irrigation or water-storage project, PFRA co-operates with the local body. The usual procedure is for the Government of Canada to assume the capital cost of storage and connecting works and the provincial body to assume the responsibility for the distribution of water to the land or along the watershed. The local body also undertakes maintenance and operation.

To Mar. 31, 1954, PFRA provided the necessary assistance to construct 292 community projects, the majority of which are located on six watersheds originating in the three Prairie Provinces. The purpose of these projects is to conserve the surplus spring runoff water to supplement short supply later in the year. By maintaining stream flows, farmers are assured of dependable water supplies for live stock and for irrigation use. In addition, community projects provide homes for farmers moved from submarginal areas to where they can be assured a livelihood.

PFRA's responsibility for the development of large community irrigation schemes terminates with the construction of primary reservoirs and connecting canals. In special cases where the need for early returns to farmers proved imminent, PFRA has assisted further in the development of the irrigable land and has maintained a constant surveillance of the project's operations and progress. At times, agreement has been reached between PFRA and the provincial government concerned whereby PFRA provides engineering and financial assistance to construct primary works and the province agrees to assist with the development of the irrigable area. Such an agreement is in effect in connection with sections of the Swift Current Irrigation project being developed in Saskatchewan.

Major Irrigation Projects.—During recent years PFRA has administered special votes by Parliament for the construction of water conservation and development projects that involve large expenditures of money. These undertakings have extended PFRA administration beyond the boundaries of the PFRA area in the three Prairie Provinces into British Columbia.

St. Mary Irrigation Project.—The St. Mary Irrigation project has been undertaken by agreement between the Government of Canada and the Province of Alberta. The Government of Canada has agreed to construct the main supply reservoirs and connecting works. The Province of Alberta has undertaken the responsibility for construction of the auxiliary reservoirs and distribution system from the main works to the land (*see also* p. 398).

The St. Mary River System is by far the most important irrigation project undertaken in Canada and, when completed, will irrigate an area of approximately 510,000 acres. Construction of the St. Mary Dam, key structure on the whole project, was completed in 1951. It stands 195 feet high and is 2,536 feet wide, and creates a reservoir capable of storing 320,000 acre-feet of water. Approximately 200 miles of main canal have been built and 10,000 acres of land have been developed, together with over 100 miles of the distribution canal system. Further lands are under development.

South Saskatchewan River Development.—This development in central Saskatchewan is a proposed multipurpose project to be used for developing power and irrigation, the irrigable area lying between the town of Elbow and the city of Saskatoon. The key structure on the project will be a dam on the South Saskatchewan River located at a point midway between the towns of Outlook and Elbow.

The plan is to stabilize agriculture in the south-central area of the Province where prolonged droughts have created serious economic problems for over 50,000 farmers. Full use will be made of the river's control, power, urban water supply and recreational benefits.

Bow River Irrigation Project.—The Bow River project was purchased by the Government of Canada in 1950 from the Canada Land and Irrigation Company, a private British interest. Development of this project will ensure water to 57,000 acres of land at present irrigated and will bring an additional 180,000 acres "under the ditch". Construction activities so far have been mainly the repair and enlargement of old structures to meet new and increased demands. Twelve thousand acres of new land in the Hays district of the Bow River irrigation project were prepared for settlement in 1951. A complete irrigation distribution system was installed in the area (*see also* p. 398).

Red Deer Irrigation Project.—The proposed Red Deer River development concerns the irrigation of an estimated 400,000 acres of land located in the east-central part of Alberta. The project will consist of a dam on the Red Deer River at Ardley and about 100 miles of main canal to two main reservoirs—Craig Lake and Hamilton Lake. The dam will contain power installations to produce power for pumping and also for sale commercially. An estimated 20,000,000 kwh. of water power will be available for sale when power is fully developed. Development plans are under preparation.

Irrigation Development in British Columbia.—Irrigation development in British Columbia has been undertaken in connection with the Veterans' Land Act and at the request of the British Columbia Government. Three projects (the Chase irrigation project and the Johnstone Western Canada ranching projects No. 1 and No. 2) have been completed within the South Thompson Valley area. On these projects, 809 acres of land have been developed for irrigation for the benefit of approximately 40 veterans of World War II.

In the Okanagan Valley three new projects have been completed (the Westbank irrigation project and the Bankhead project near Kelowna, and the Cawston Benches project located east of the town of Keremeos). The three projects irrigate 1,782 acres of land and provide locations for 170 veterans of the Second World War. The Penticton West Benches project, irrigating approximately 200 acres and accommodating 97 veterans on small holdings, was completed in 1953.

Intensive farming is practised in the Okanagan and South Thompson Valleys. The land developed for irrigation by PFRA is used mainly for the growing of small fruits and vegetables and for dairying. New projects are constantly being investigated as potential development areas.

Major Reclamation Projects.—*Riding Mountain Reclamation Project.*—Extensive investigations have been undertaken by PFRA in the Riding Mountain area at the request of the Manitoba Government. A serious flood problem exists on a number of streams flowing off the north and east slopes of Riding Mountain and Duck Mountain, causing damage to a large area of valuable agricultural land. PFRA was asked to devise and carry out a plan to relieve a land area of over 252,000 acres affected by flooding.

The cost of reclamation in the area is borne jointly by the Government of Canada and the Government of Manitoba. Construction work so far has centred mainly along Edwards and Mink Creeks in the Riding Mountain area. The work consisted of clearing and dyking stream channels and straightening the alignment of channels by building stream cutoffs and diversions. The larger portion of the work on these two streams was completed in 1951.

Stream bank erosion studies are also being continued on streams of Riding Mountain to stabilize stream banks and minimize erosion problems. It will be necessary to continue the studies for a number of years before definite results can be presented.

Saskatchewan River Reclamation Project.—Surveys and investigations were made by PFRA to determine the possibility of successfully reclaiming land for agriculture in the Pasquia area of the Saskatchewan River delta region near the town of The Pas in Manitoba. As a result, an agreement was reached on Apr. 17, 1953, between the Government of Canada and the Province of Manitoba for the construction of the necessary reclamation works to protect the area from flooding and to settle about 96,000 acres of suitable land. The Government of Canada is assuming the costs of building the main protective works, and the Province is assuming the costs of settlement, maintenance of works, and internal drainage. Half of the reclaimed land will be reserved for the resettlement of farmers from drought areas and the remainder is to be sold. Part of the proceeds from the sale of the lands will go to the Federal Government as a partial reimbursement of the costs of building the main protective works. Construction was started early in 1953; it will take three years to complete the works consisting of dykes, drains and diversion of streams.

Assiniboine River Project.—This project is being undertaken at request of the Manitoba Government to prevent flooding on the Assiniboine River, particularly between Brandon and Virden and between Portage la Prairie and Headling where thousands of acres of valuable agricultural land have been inundated repeatedly. All the studies undertaken are in conjunction with the Red River Basin investigation currently being carried out.

Several alternative plans are being investigated to divert excess water from the Assiniboine River during flood stages. Detailed study is being given to water runoff data in the Assiniboine River Drainage Basin and the possibility of building water-storage works on the headwaters of the Assiniboine River.

Lillooet Valley Reclamation Project.—The Lillooet Valley Reclamation project was undertaken upon agreement between the Government of Canada, the Government of British Columbia and the Pemberton Valley Reclamation District. This project is located in the Lillooet River Valley above and below the town of Pemberton and its objective is to protect lands now under cultivation from flooding and to reclaim additional lands by dyking and drainage. The land reclaimed amounted to 14,000 acres, which allowed farmers in the district to increase their holdings and also permitted the settlement of hundreds of additional inhabitants.

Land Utilization

In addition to cultivation and water-conservation activities, rehabilitation of drought areas involves the conversion of large tracts of land proved to be unsuitable for crop production, which had initially been cultivated to a permanent grass cover for live-stock production, and the relocation of farmers residing thereon. To this end, PFRA's Land Utilization Program has constructed 62 operating pasture units, resulting in the reclamation of 1,677,416 acres of submarginal land. During the 1953-54 construction season 25,396 additional acres were fenced and included in the pasture system.

During the year ended Mar. 31, 1954, summer grazing was provided for 110,000 head of live stock owned by 6,421 patrons living on lands adjacent to these pastures.

An extensive pasture improvement program is in effect on all pastures and is immediately initiated as soon as new areas are enclosed. This policy has more than doubled the 1938 average carrying capacity on pasture land. The three improvement policies most extensively practised in all pastures are: (1) regrassing—since 1938 approximately 180,293 acres of land in community pastures have been regrassed; (2) development of stock-watering sites—to Mar. 31, 1954, over 1,000 stock-watering dams, dugouts and wells have been constructed in community pastures; and (3) pasture management and controlled grazing.

MARITIME MARSHLANDS REHABILITATION ACT

The marshlands of Prince Edward Island, Nova Scotia and New Brunswick are among the more productive soils in Canada when protected and properly cultivated. They are composed of deposits laid down by tidal waters and are, for the most part, adjacent to the Bay of Fundy.

The initial areas were reclaimed as early as 1630 and since that time about 80,000 acres have been protected by dykes and aboiteaux. These structures prevented flooding by tide water and permitted cultivation after drainage had been carried out.

Through a variety of circumstances—loss of cattle markets, loss of hay markets and the increase in labour costs—maintenance of the protective structures was not adequately carried out and deterioration of many of the structures resulted. Because the marshlands, when protected, can play such an important role in the agricultural economy of the provinces concerned, the Government of Canada and the Provincial Governments of Nova Scotia and New Brunswick passed legislation permitting them to carry on a program of reclamation and rehabilitation of these lands. The federal Act, the Maritime Marshland Rehabilitation Act, was passed in 1948. Complementary provincial marshland reclamation Acts were passed by both Nova Scotia and New Brunswick in 1949. These Acts permitted agreements to be signed whereby the Government of Canada would construct or reconstruct the protective works, normally called dykes, aboiteaux and breakwaters, and also would assume the responsibility of maintaining these works until such time as they could be turned back to the Provinces. The Federal Government is responsible also for any engineering work in connection with the complete program. The Provinces are responsible for the organization of the marsh areas, the fresh-water drainage and acquisition of any land required. They are responsible also for the instigation and follow-up of a suitable land-use program. Owing to the small area of marshland in Prince Edward Island, no provincial legislation was considered necessary in that Province.

By Mar. 31, 1954, the Provinces had asked to have 127 areas considered for reclamation purposes. These comprised 38,588 acres of marshland in New Brunswick (including 8,058 salt or unprotected marsh), 34,102·4 acres in Nova Scotia (including 5,486·5 salt or unprotected marsh) and 275 acres in Prince Edward Island. The 72,965·4 acres of marshland in the three Provinces constitute an integral part of the estimated 404,000 acres of farm land.

By the end of the 1954 construction season, protective works of a major type had been carried out on 70 projects and 35 areas had been temporarily reconstructed.

Investigations to determine the advisability of constructing a large structure to eliminate the need for many miles of dyke and many aboiteaux were being carried out on the Annapolis River in Nova Scotia and on the Tantramar and Shepody Rivers in New Brunswick. Construction on the Shepody River project was started in 1953.

Subsection 2.—Provincial Projects

Saskatchewan.*—Crown lands have been administered by the Lands Branch of the Saskatchewan Department of Agriculture since Apr. 1, 1947. On Apr. 1, 1949, the Conservation and Development Branch was established and made responsible for: (1) the administration of water rights; (2) development of irrigation; (3) flood control and drainage; (4) restoration of abandoned, under-utilized and misused lands; and (5) construction of provincial community pastures outside the area covered by the agreement with PFRA and not provided for in the agreement with the Federal Government.

The Provincial Department of Agriculture's conservation and development activity in the field of agricultural rehabilitation and reclamation is based on co-operation with the federal PFRA program with which a closely knit working arrangement is maintained. Following is a summary of the activities of the Saskatchewan Department of Agriculture, as at Dec. 31, 1953:—

Irrigation Development.—By the end of 1953, 100,908 acres of topographic surveys and 139 miles of strip topographic surveys were completed on irrigation projects; 252 miles of ditch were built and 84 miles maintained; 1,122 structures were installed and 3,310 acres were levelled.

Drainage Development.—Topographic surveys covered 121,034 acres and 3,146 miles of strip topographic surveys were completed on drainage projects; 298 miles of ditch and 120 miles of road were built and 93 miles of ditch maintained; 196 structures were installed in drainage systems.

---

* Prepared under the direction of W. H. Horner, Deputy Minister of Agriculture, Regina, Sask.

Development of Under-utilized and Misused Lands.—A total of 40,122 acres of tame perennial forage crops were seeded, mostly for fodder production; and 538 miles of fence were built or rebuilt in the establishment of departmental, municipal or co-operative pastures.

Miscellaneous Project Work.—Such projects included: regrassing about 12,000 acres; planting 350,000 trees; constructing 89 dams and dugouts (with the co-operation of groups of farmers in the area of northern Saskatchewan outside the boundaries of the PFRA program) organizing 11 conservation areas covering 1,418,000 acres, in order to help local farmers install and maintain drainage and other conservation works.

Pasture Development.—Development and improvement of 72 pastures, with a total area of 639,025 acres, was carried out in the area of the Province outside the PFRA program. These pastures are operated by the Lands Branch of the Department of Agriculture, by the municipality or municipalities in which they are located, or by co-operative associations. In 1953, provincial community pastures alone provided grazing for 12,536 cattle and calves owned by 582 local farmers.

Development of Land for Settlement.—Six projects for the development and improvement of unoccupied land for agricultural settlement were carried out during the period Apr. 1, 1950, to Dec. 31, 1953. These projects included the breaking of 50 acres on each of 287 farm units; each unit is leasable for a 33-year term, the leases specifying the conservation methods to be followed.

Alberta.*—Extensive surveys have been carried out in Alberta to determine the distribution and extent of the available water supplies in the Province and their most beneficial use for irrigation, water power and other purposes. Sect. 69 of the Alberta Water Resources Act gives the Minister of the Department of Water Resources wide powers with respect to investigation of the water resources of the Province.

In more recent years much of the work has been carried out by the Federal Government in co-operation with the Provincial Government. Stream measurement is now done by the Hydrometric Service of the Federal Department of Northern Affairs and National Resources, and irrigation surveys are carried out largely by the Water Development Organization under PFRA. The Water Resources Division of the Federal Resources Department and the power companies operating in the Province also assist in the program.

The Calgary Power Company has completed a fairly extensive and detailed water-power survey of the Bow River and its tributaries and, as a result, the Company has constructed a number of water-power reservoirs and power stations on the stream. Also, in co-operation with the Provincial Government, the Company has made a preliminary survey of Lesser Slave River and the Athabasca River from Athabasca to McMurray.

By Order in Council dated Feb. 17, 1941, the St. Mary and Milk River Water Development Committee was set up to investigate and report on the many phases of irrigation development of southern Alberta including water supplies available to Canada from the Waterton, Belly, St. Mary and Milk Rivers; the most feasible plan to put these waters to the most beneficial use; the benefits that such water-development projects would confer on federal and provincial interests; the allocation of costs; and methods that might be adopted to finance such developments. The

Committee completed a very thorough investigation and published a full and comprehensive report, not only on the projects on the international streams, but also on other projects in Alberta.

The allocation of water to the major irrigation projects in Alberta, as approved by the Prairie Provinces Water Board, are as follows:—

Project	*Acres Irrigable*	*Water Allocation in Acre-feet*
St. Mary and Milk River Development	465,000	796,000
Western Irrigation District	50,000	85,700
Eastern Irrigation District	281,000	562,000
Bow River Irrigation Development	240,000	478,534
United Irrigation District	34,000	51,000
Lethbridge Northern District	96,135	150,000
Mountain View Irrigation District	3,600	6,000
Ætna Irrigation District	7,300	13,000
Leavitt Irrigation District	4,400	7,000
Macleod Irrigation District	5,000	8,000
Private Projects	70,000	80,000
TOTALS	1,256,435	2,237,234

The following paragraphs outline development during the 1953-54 season:—

St. Mary River Project.—Progress on this project was good during the season despite delay caused by a wet spring. By early 1954, 263,000 acres were either being served, were completed and capable of being served or were under construction. To Mar. 31, 1954, the Alberta Government's expenditure on the project was estimated at $11,739,361.

Bow River Project.—During the season, PFRA completed construction of the Travers dam and continued construction on the main canal and other works. The Alberta Government expended approximately $200,000 on the Retlaw-Lomond section of the Bow River project and awarded the 1954-55 contract for that tract; appropriation for 1954-55 is $750,000.

William Pearce Irrigation Project.—Surveys and studies were continued during 1953 regarding the suitability of the soils in those areas blocked out for the project.

Macleod Irrigation District.—This system was placed in operation for a short period in 1953 but very little irrigating was carried out. Most of the water run through the system was used to fill dugouts for stock-watering purposes. During the year extensions were made to the main canal and laterals. The amount expended on this project by the Provincial Government in the year ended Mar. 31, 1954, was $21,400.

Lake Level Stabilization.—Water stabilization projects have been built as a co-operative effort between the Water Resources Office, the Department of Lands and Forests and Ducks Unlimited. For the most part, they are small structures placed in the outlets of major lakes and pipes are inserted through the dams to maintain steady flow in outlet creeks. These projects have a definite water conservation value as well as furnishing a habitat for fish and game. In 1953, work was done on Norberg and Bunder Lakes; the expenditure on these two projects was $8,000.

Heart River Project.—No major construction was done on this project in 1953 but a canal that will supply water to the town of McLennan will be constructed in 1954.

Stream Control.—The season's work consisted of: additional dyking on the Highwood River for the purpose of retaining Bow River water in its own watershed; extending and repairing the dyke near the town of Fort Macleod, which was damaged during the flood of 1953; cleaning out the Seven Persons Creek and Ross Creek channels at Medicine Hat; preparing an aerial survey map of the Blairmore and Coleman district to correct the flooding of the Crowsnest River; constructing protection works to prevent the Oldman River from by-passing the diversion works of the Lethbridge Northern Irrigation District. Expenditure on these projects amounted to $233,245 in the year ended Mar. 31, 1954.

Peace River Dugout Program.—The Provincial Department of Agriculture extends assistance for the construction of dugouts in the Peace River area because of a serious lack of underground water. Assistance is on the basis of six cents per cu. yard up to a maximum of $120 per dugout (2,000 cu. yards). During 1953, 115 dugouts were constructed making a total of 2,163 dugouts to Mar. 31, 1954. Expenditure in 1953-54 amounted to $12,463. The program, which is of incalculable benefit to the Peace River area, is administered by District Agriculturists.

Ground Water Control Act.—This Act, passed in 1953, is designed to prevent the wastage of underground water and water pressure in the acquafers. Regulations were drafted and are now officially adopted requiring the registration of all those who drill for water on lands not necessarily their own. It is now proposed to register all water-boring operators and to require proper control of water flows obtained from underground sources.

British Columbia.*—About 17 p.c. of the arable land in British Columbia is under cultivation and nearly all the grazing area is being utilized. The 1,100,000 acres developed give a ratio of approximately one acre per person. Within this arable area there exist an estimated 163,777 acres of irrigated land, and the total acreage of irrigable land in British Columbia is estimated at 181,974 acres.

About two-thirds of the irrigated area is made up of individual projects and the other third is served by the larger irrigation projects listed in Table **5**.

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Decennial Census of Canada and the Census of the Prairie Provinces. Complete details of the 1951 Census of Agriculture may be found in Volume VI of the *Census of Canada, 1951*.†

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, dairying, milling and sugar industries and cold-storage holdings.

---

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

† Copies obtainable from the Dominion Statistician or the Queen's Printer, Ottawa, Ont.

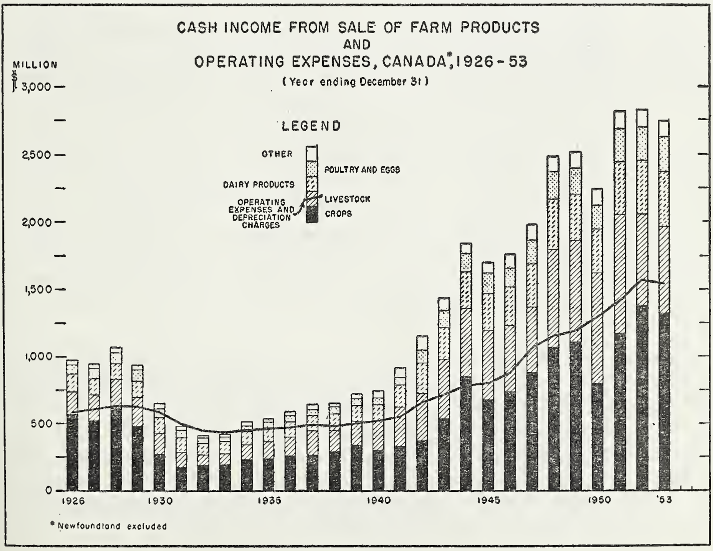
In the collection of annual and monthly statistics, the Federal Department of Agriculture and the Provincial Departments of Agriculture, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Many thousands of farmers throughout Canada also send in reports voluntarily.

The figures for 1949 to 1953 (except for 1951 Census data) contained in this Section do not include those for Newfoundland, though that Province came into Confederation on Mar. 31, 1949. Agriculture plays a relatively minor part in Newfoundland's economy. The climate is not well suited to the production of any but the hardier crops and the amount of pasture land and arable soil is limited.

Subsection 1.—Cash Income from the Sale of Farm Products

Preliminary estimates indicate that, during 1953, Canadian farmers (exclusive of Newfoundland) realized $2,741,300,000 from the sale of farm products and from participation payments on previous years' grain crops. This estimate is 3 p.c. below the all-time high of $2,826,600,000 estimated for 1952. Supplementary payments made to western farmers under the provisions of the Prairie Farm Assistance Act amounted to only $1,600,000 in 1953 as compared with $5,100,000 in 1952. Higher income from the sale of wheat, dairy products, eggs, corn, sugar beets, hay and wool was more than offset by lower returns from other products.

As in 1952, a heavy year-end farm carry-over of wheat enabled western farmers to market exceptionally large quantities of this grain during the first seven months of the year. Although deliveries during the latter part of 1953 were below the 1952 level, the total for the year was well above that for 1952. The quality of the grain



CASH INCOME FROM SALE OF FARM PRODUCTS AND OPERATING EXPENSES, CANADA*, 1926-53

(Year ending December 31)

* Newfoundland excluded

delivered during the spring of 1953 was also above that of a year earlier. Though the initial prices for specific grades were unchanged from the previous year, the higher grading resulted in a higher weighted average initial price. Total wheat participation payments in 1953 at $125,400,000 were substantially below those of 1952. Final wheat payments, usually made before the end of the calendar year, were delayed until the closing of the 1952-53 pool on Jan. 30, 1954. Although prices of oats and barley were relatively unchanged in 1953, marketings were down.

The greatest reduction in receipts from the sale of field crops occurred in the receipts from potatoes. As a result of substantial reduction in potato prices from the unusually high levels of the previous year, income from this source was down by more than 50 p.c. A smaller crop and reduced prices combined to provide returns from tobacco of $59,200,000 as against $66,700,000 of the previous year.

Lower prices for all live stock except hogs, and smaller marketings of hogs and sheep combined to reduce income from the sale of live stock about 6 p.c. below the 1952 level. A substantial increase in cattle marketings during the year 1953 reflected the build-up of the cattle population which commenced in 1950 and continued during the period of restricted export movement arising out of the discovery of foot-and-mouth disease in Saskatchewan early in 1952. Support for cattle prices, which commenced in April 1952 as a result of the foot-and-mouth outbreak and the consequent imposition by the United States of an embargo on imports of Canadian cattle, was continued until the lifting of the import restrictions on Mar. 1, 1953. Prices of good steers, at Toronto, fluctuated around the support price of $23 per 100 lb. during the first two months of 1953 and then declined by approximately three dollars to a level that was maintained fairly consistently during the remainder of the year.

Early in 1953, hog marketings began to decline from the 1952 level and, as the year progressed, the difference between the two periods became more apparent. This decline in hog marketings was recorded in all provinces except Alberta where increased marketings occurred. Prices for hogs in 1953 were well above the 1952 level. The weighted average price of all hogs sold in Canada was the third highest on record, being exceeded only by prices established in the years 1949 and 1951. This favourable price position for hogs in Canada during 1953 is attributable, in large part, to the strong market for hogs prevailing in the United States.

Income from the sale of poultry and eggs was about 5 p.c. higher than in 1952. Although income from poultry meat was below the 1952 level, this decline was more than offset by increased returns from the sale of eggs. While total marketings of eggs in 1953 were relatively unchanged from 1952, the average prices realized were substantially higher.

Income from the sale of dairy products at $413,100,000 was approximately 4 p.c. above that of 1952. Lower prices were more than offset by increased production occasioned by a continued rise in numbers of milk cows during the year. Under the Federal Government price-support program, the Agricultural Prices Support Board purchased Canada First Grade creamery butter meeting its specifications at 58 cts. a pound, f.o.b. Montreal or Toronto, with appropriate differentials for other delivery points. This program, in effect for two years and due to expire at the end of April 1953, was renewed for a further two-year period.

Net Income of Farm Operators from Farming Operations, 1953.—Preliminary estimates indicate that during 1953, Canadian farm operators (exclusive of Newfoundland) realized a net income from farming operations of $1,656,600,000. This figure is 13 p.c. lower than the revised net income of $1,900,800,000 realized in 1952 and 23 p.c. lower than the 1951 record high net income estimate of $2,154,500,000. The decline in net income for the second consecutive year was the result of a drop of 8 p.c. in the gross farm income, more than offsetting a decline of 3 p.c. in farm operating expenses and depreciation charges. Gross farm income in 1953 is estimated at $3,193,300,000 as compared with the all-time high of $3,578,500,000 reached in 1951. The decline from the 1952 level of $3,477,900,000 was the result of lower returns from the sale of farm products and a very substantial drop in the value of year-end changes in farm-held stocks of grains and live stock. Income in kind for 1953 was down 3 p.c. from 1952; this item includes the value of that produce grown by farm operators and consumed in the farm home plus an imputed rental value of the farm dwelling.

Value of Farm Lands.—The average value of occupied farm lands in Canada for 1953 is reported as $51 per acre. This represents an increase of 6·3 p.c. over the average value in 1952 and an increase of 112·5 p.c. over the 1935-39 average. Increases in farm land values over 1952 levels were recorded in all provinces except Prince Edward Island and Nova Scotia. The all-Canada average is determined by weighting the provincial averages by the area of occupied farm land in each province.

10.—Average Values per Acre of Occupied Farm Lands, by Province, Selected Years, 1910-53

Note.—Figures include unimproved lands and buildings.

Subsection 2.—Volume of Agricultural Production

The index of farm production in Canada for 1953 is estimated at 155·0 (1935-39 = 100). This figure is the third highest recorded since 1935 and is exceeded only by the estimate of 164·2 for 1942 and the all-time high of 165·2 established in 1952.

The drop of approximately 10 points in the index from 1952 to 1953 was largely attributable to smaller grain crops and a decline in the output of live stock. To a lesser degree, reduced production of sugar beets, fruits, tobacco, vegetables and maple products also contributed to the decline. Offsetting this to some extent were the gains in production recorded for potatoes, dairy products, and poultry and eggs.

11.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1944-53

(1935-39=100. Exclusive of Newfoundland)

NOTE.—For a description of this index, methods and coverage, *see* DBS *Quarterly Bulletin of Agricultural Statistics* for April-June, 1952. Figures for 1935-43 are given in the 1950 Year Book, p. 420.

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total

Subsection 3.—Field Crops

Production of many of Canada's grain, fodder and oilseed crops in 1953 reached, for the third consecutive year, unusually high levels. New production records were set for only one crop, soybeans, but harvests of five other crops—wheat, barley, rye, shelled corn and rapeseed—were the second largest on record. Although seeding in many areas throughout the country was unduly prolonged, warm weather and frequent rains, especially in Western Canada, so accelerated plant growth that the adverse effects of late seeding were largely overcome. Losses to the Western Canadian grain crop from insect damage were, as in 1952, almost negligible but damage from hail and rust was more serious than it has been in recent years.

Almost without exception, average yields per acre of spring-sown grains in 1953 were higher than in 1952 in Eastern Canada and British Columbia but somewhat below the record or near-record 1952 levels in the Prairie Provinces. Average yields of fall-sown grains, with the minor exception of fall rye in Quebec, were above those of 1952. Generally favourable growing and harvesting conditions in Western Canada in 1953 also contributed to a crop of high quality. About 79 p.c. of the wheat inspected during the crop year 1953-54 graded No. 4 Northern or higher (excluding "Toughs" and "Damps"), compared with 66 p.c. in 1952-53 and 62 p.c. for the five-year average (1947-48—1951-52). Grades of Western Canadian oats, barley, rye and flaxseed in 1953-54 showed similar improvement over those of both the preceding crop year and the five-year averages.

The gross value of production of principal field crops from Canadian farms in 1952, based on average prices received by farmers throughout the 1952-53 crop year, was estimated at a record $2,306,000,000, exceeding by almost 9 p.c. the previous record of $2,120,000,000 set in 1951. Complete data on the value of Canada's 1953 crops will not be available until several months after the close of the 1953-54 crop year but the gross value is expected to be below that of 1952 as the result of reduced volume of production and somewhat lower prices for many crops. Estimates of the value of the 1953 crops, based on average prices received by farmers during the crop year ended July 31, 1954, will be published in one of the regularly scheduled DBS crop reports and in the *Quarterly Bulletin of Agricultural Statistics*.

14.—Acreages and Production of Grain in the Prairie Provinces, 1951-53

NOTE.—Figures for years before 1951 will be found in the corresponding table of previous editions of the Year Book.

Grain	Acreages			Production		
	1951	1952	1953	1951	1952	1953
	'000 acres	'000 acres	'000 acres	'000 bu.	'000 bu.	'000 bu.
Wheat	24,385	25,204	24,648	529,000	664,000	584,000
Oats	8,312	7,560	6,490	340,000	346,000	276,000
Barley	7,530	8,145	8,599	234,000	281,000	251,000
Rye	1,047	1,193[r]	1,411	15,980	23,200[r]	26,850
Flaxseed	1,086	1,047[r]	926	8,870	11,300[r]	9,300

Stocks of Grain in Canada.—Table **15** shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1951-53, with averages for the five-year periods 1935-39, 1940-44 and 1945-49. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

15.—Carryover of Canadian Grain as at July 31, 1951-53, with Five-Year Averages, 1935-49

NOTE.—Figures for individual years before 1951 will be found in the corresponding table of previous editions of the Year Book.

As at July 31—	Total in Canada and United States	Total in Canada	In Commercial Storage in Canada	On Farms in Canada	Prairie Provinces

The Federal Department of Agriculture inspects all live stock in plants designated as inspected establishments under the Meat and Canned Foods Act. A statistical record is kept of these inspections and the figures appear in Table **18**. Local wholesale butchering and such slaughterings as are carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat-packing industry is concentrated into a comparatively small number of large establishments to facilitate greater efficiency and utilization of products. Thus, the figures of Table **18** are fairly inclusive. The slaughtering and meat-packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XV of this volume. On a gross value basis it normally ranks among the three largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Wool.—Wool production in Canada (exclusive of Newfoundland) in 1953 was 12 p.c. above that of 1952. The 1935-39 average was 16,022,000 lb. and the 1953 production 8,621,000 lb. The shorn-wool production in 1953 was higher, the result of an increase in sheep population. Average fleece weight was 7·4 lb. compared with 7·7 lb. in 1952. The 49·4 p.c. increase in wool pulled from domestic skins was partly accounted for by an increase in inspected slaughterings of sheep and lambs.

Exports of wool in 1953 were 3,756,000 lb. compared with 3,639,000 lb. in 1952, while imports rose from 49,537,000 lb. in 1952 to 63,088,000 lb. in 1953. Thus, assuming there was no change in stocks, the domestic disappearance of wool was higher by 26·8 p.c. in 1953 than in 1952.

19.—Production and Apparent Consumption of Wool, 1951-53

Note.—The 1951 figures shown are based on the Census Revisions of 1950 and previous figures on the same basis are not yet available.

Item		1951	1952	1953
Shorn Wool—				
Yield per fleece	lb.	7·5	7·7	7·4
Total yield shorn	'000 lb.	5,700	6,378	6,659
Price per pound	cts.	74	36	38·5
Total value of shorn wool	$'000	4,231	2,265	2,565
Total pulled wool	'000 lb.	1,182	1,313	1,962
Total wool production	"	6,882	7,691	8,621
Apparent consumption	"	73,238	53,589	67,953

Subsection 5.—Dairying

Milk Production.—Milk production in 1953 amounted to 16,424,800,000 lb., an increase of 690,197,000 lb. over the previous year. The proportion of the total milk production used for factory-made dairy products increased from 55·7 p.c. in 1952 to 56·7 p.c. in 1953, but the proportion sold in fluid form showed a very small decrease. Milk used for all purposes on farms (home consumed, manufactured and fed) declined from approximately 14·0 p.c. of the total in 1952 to 13·0 p.c. in 1953.

20.—Production and Utilization of Milk, by Province, 1950-53, with Totals for 1946-53

Note.—Figures for 1950-52 have been revised since the publication of the 1954 Year Book.

Province and Year	Used in Manufacture		Milk Otherwise Used			Total Milk Production
	On Farms	In Factories	Fluid Sales	Farm-Home Consumed	Fed on Farms

Butter and Cheese Production.—Butter production in 1953 amounted to 325,633,000 lb., 19,405,000 lb. more than in 1952. Of the 1953 total, 302,606,000 lb. was creamery butter, 21,289,000 lb. dairy or farm-made butter and 1,738,000 lb. whey butter. Creamery output was the highest since 1943 when the total was 312,000,000 lb. From that year to 1951 declines were almost continuous but the trend turned upward in 1952 and 1953. Butter production was affected by the introduction of margarine in 1949; output of that product amounted to 73,958,000 lb. in 1949, 94,032,000 lb. in 1950, 108,056,000 lb. in 1951, 110,955,000 lb. in 1952 and 110,499,000 lb. in 1953.

Factory cheese production in 1953 was estimated at 81,660,000 lb., an increase of 10·8 p.c. over the 1952 estimate but 60·6 p.c. below the peak production of 207,431,000 lb. in 1942. Total cheese production in 1942, including factory and farm-made cheese, reached an all-time high of 208,219,000 lb.; the total manufactured in 1952, on the other hand, was probably the lowest since the mid-1880's. Restrictions placed on the importation of cheese into the United Kingdom during 1945 to 1948 was responsible for the drastic cut in cheese production in those years. Lower creamery butterfat prices in 1949 and uncertainties resulting from the introduction of margarine production led farmers to sell more of their milk to cheese factories. This resulted in a temporary recovery of cheese production for that year, but the decline continued in the three succeeding years. The increase in 1953 may be attributed in some measure to a falling-off in the production of evaporated milk.

[1] Factory-made cheese includes cheddar and other cheese made from whole milk. The latter amounted to 5,005,000 lb. in 1950, 5,477,000 lb. in 1951, 5,850,000 lb. in 1952 and 6,475,000 lb. in 1953, produced principally in Quebec and Ontario.

Production of Concentrated Milk Products.—Products manufactured in concentrated milk plants and creameries equipped with powder manufacturing facilities are classified as whole-milk products and milk by-products. Production of whole-milk products in 1953 decreased 8 p.c. from 1952 production and concentrated milk by-products decreased 5 p.c.

Domestic Disappearance of Dairy Products.—The estimated consumption of fluid milk and cream, on a milk basis, amounted to 4,533,000,000 pt. in 1953, 147,000,000 pt. higher than the 1952 consumption and 408,000,000 pt. above that of 1943. The average daily consumption per capita was 0·86 pt. in 1953 compared with 0·85 pt. in 1952. The peak daily per capita consumption of approximately 1 pt. was reached during the period 1944-46 when subsidies were in effect.

Domestic disappearance of butter (creamery, dairy and whey) was approximately 308,674,000 lb. in 1953, compared with 300,406,000 lb. in 1952 and 370,153,000 lb. in 1948. Per capita figures reflected this decline, falling from 28·73 lb. in 1948 to 20·82 lb. in 1952 and 20·88 lb. in 1953. The per capita consumption of margarine for 1952 and 1953 was 7·72 lb. and 7·46 lb., respectively.

The domestic disappearance of cheese (including cheddar, process and other) was about 89,154,000 lb. in 1953, an average of 6·03 lb. per capita. In the previous year the per capita average was 5·83 lb.

The domestic disappearance of concentrated whole-milk products increased from 20·30 lb. per capita in 1952 to 20·78 lb. in 1953.

Disappearance of all dairy products represented the equivalent of approximately 1,033 lb. of milk per capita in 1953 compared with 1,026 lb. in 1952.

[1] Exclusive of Newfoundland.

[2] Includes malted milk, cream powder and substandard products of a variable fat content, items that do not appear separately in this table.

[3] Since the quantities used for human consumption and live-stock feeding cannot definitely be established, per capita figures cannot be calculated.

[4] Includes milk by-products items not separately listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein and powdered whey.

[5] Includes ice cream in terms of milk.

Subsection 6.—Poultry and Eggs

Statistics of production and consumption of poultry meat and eggs are given in Tables 27 to 29.

[1] Includes hatching eggs.

Subsection 7.—Fruit

Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. In Nova Scotia production is centred mainly in the Annapolis Valley and in New Brunswick it is centred in the St. John River Valley and Westmorland County. The fruit-growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and Quebec City district. In Ontario, fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia, the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not suitable for commercial tree-fruit culture.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a very large proportion of the deciduous fruit consumed in Canada is domestically grown. Considerable quantities of apples, strawberries and blueberries are exported annually. The United States is the most important export market for Canadian fruit. The import restrictions of the United Kingdom have greatly reduced exports of Canadian fruit to that market in recent years. In most of the producing areas, and particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit-growing is the principal form of agriculture and its prosperity is of paramount importance to the economy of those areas. Apples and small fruits are produced commercially in the four provinces named, but tender tree fruits and commercial vineyards are limited to Ontario and British Columbia.

Canning and processing industries have developed in the fruit-growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops. Some canned fruits are exported.

30.—Estimated Commercial Production and Farm Value of Fruit, 1950-53

[1] Farm value (to pickers in the case of blueberries) for unpacked fruit. [2] Excludes blueberries.

Subsection 8.—Special Crops

Tobacco.—The chief tobacco-growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie. Most of the cigarette tobacco comes from that district. In Ontario in 1953, 90,800 acres of flue-cured or Bright Virginia-type tobacco and 1,096 acres of Burley tobacco were harvested. These are the most important types grown, though dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a more limited scale. The only other important production comes from Quebec. In 1953, 4,920 acres of flue-cured tobacco, 3,000 acres of cigar tobacco and 1,100 acres of pipe tobacco were harvested in that Province.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, the Canadian per capita consumption of cigarettes was 229, cigars 20, cut tobacco 1·3 lb., plug tobacco 1·1 lb. and snuff about 1·3 oz. By 1953, the annual per capita consumption of cigarettes had increased to 1,421, cigars had dropped to 15·9, cut tobacco went up to 1·8 lb. and plug declined considerably.

32.—Acreages, Production and Values of the Commercial Crop of Leaf Tobacco, 1950-53, with Average for 1945-49

Sugar Beets and Beetroot Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and seven beet-sugar factories are located in these Provinces. In Quebec, commercial production, which centres in the St. Hilaire area of the Eastern Townships, started in 1944; in 1953, about 70,000 tons were harvested from 7,000 acres. The sugar-beet industry of Ontario is largely confined to the southwestern section of the Province and factories are located at Wallaceburg and Chatham. In 1953, Ontario factories processed about 246,000 tons harvested from over 23,000 acres.

Processing of sugar beets in Manitoba began in 1940 when 95,000 tons were handled. In 1953, the factory processed 162,000 tons from 17,000 harvested acres. In Alberta, where the industry has shown steady growth, sugar beets are produced under irrigation with yields averaging above those received in the other provinces. In 1953, the three Alberta factories, located in the south of the Province at Raymond, Picture Butte and Taber, handled 422,000 tons of beets from a harvested area of about 35,000 acres.

35.—Acreages, Yields and Values of Sugar Beets, and Quantities and Values of Refined Beetroot Sugar Produced, 1950-53, with Average for 1945-49

Apiculture.—Honey is produced commercially in all provinces of Canada, Ontario being the largest producer. There is a considerable movement of honey from the Prairie Provinces to other parts of Canada. In recent years exports have been small, the United States being the most important external market.

The 1951 crop was the largest since 1948, despite a reduction in the number of bee colonies. In 1952 and 1953 production was lower owing to further reductions in colony numbers and to lower yields after the extremely high production per colony experienced in 1951.

In order to facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces.

Bees are kept in some of the fruit-growing and greenhouse districts of the country chiefly for purposes of pollination.

Maple Sugar and Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and the United States as the centre of the maple-products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped.

Most of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

[1] Five-year average prices are derived from actual figures, but quantities and values are rounded to the nearest thousand.

Fibre Flax.—The demand for fibre flax was heavy during World War II when exports increased to many times the pre-war volume. After the War, however, exports of fibre flax to Canada's principal market, the United Kingdom, dropped sharply and acreage devoted to this crop decreased; in 1950 it was at the lowest level since 1931. In 1951 and 1952 acreage and production increased but both declined again in 1953.

Subsection 9.—Prices of Agricultural Produce

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1953, certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1953, are final prices for all grains. Since Aug. 1, 1953, only initial prices are available for western wheat, oats and barley. Any subsequent participation payments made on the 1953 crops will be added to the prices currently used and the index revised upward accordingly.

40.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1944-53, and by Month, 1952 and 1953

(1935-39=100)

NOTE.—A description of this index, its coverage and the methods used will be found in DBS *Quarterly Bulletin of Agricutural Statistics* for October-December, 1946.

[1] Initial payments plus additional payments to producers. [2] Based on cash closing prices, Winnipeg Grain Exchange. From Aug. 1, 1944, to Oct. 22, 1947, prices of oats and barley remained at or near the government-imposed ceiling prices. From Oct. 23, 1947, to July 31, 1949, open market trading again prevailed. Equalization payments to producers are included for the crop years 1943–44 to 1947–48, inclusive. [3] Average cash closing price, Winnipeg Grain Exchange, except where otherwise noted. [4] Fixed price to growers. [5] $5 fixed price to growers plus 50 cents participation payment. [6] Winnipeg Grain Exchange renewed trading in flaxseed cash and futures on Aug. 16, 1948. The Canadian Wheat Board was authorized to buy all flaxseed offered to it during the 1948–49 crop year on the basis of $4 per bushel for No. 1 C.W. in store Fort William-Port Arthur, Ont.

42.—Yearly Average Prices per 100 lb. of Canadian Live Stock at Principal Markets, 1949-53

NOTE.—Classification of live stock was changed in February 1949 as follows: steers up to 1,050 lb. changed to steers up to 1,000 lb.; steers over 1,050 lb. to steers over 1,000 lb.; lambs, good handy weights to lambs, good; sheep, good handy weights to sheep, good.

Subsection 10.—Food Consumption

Consumption of Major Foods.—A study of consumption of the major foods was undertaken during World War II by the Dominion Bureau of Statistics in recognition of the national and international significance of such information. Though data on total consumption of certain commodities such as wheat, alcoholic beverages, meats, etc., had been available for a considerable period, it was found necessary to establish a per capita level of consumption of a wide range of products on a comparable basis.

The figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except for meats, where the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out that there are minor discrepancies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers were not available. However, the figures represent the best summary of food consumption data that has been compiled for Canada.

All basic foods have been classified under 13 main commodity groups. Totals for each group have been computed using common denominators for the group, for example: milk solids (dry weight) in the dairy-products group; fat content for fats and oils; and fresh equivalent for fruits. All foods have been included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table **43** represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the years 1951, 1952, and 1953.

[1] Fluctuations in apparent per capita flour consumption are owing partly to unavailability of complete data on flour inventories in all positions. [2] Not available pending revision of intercensal estimates. [3] Includes soybean flour. [4] Exclusive of Newfoundland. [5] Includes process cheese. [6] Includes cream expressed as milk.

Consumption of Meats.—Production of meats from slaughter, total supply, distribution and per capita consumption of meats and lard are shown in Table 44. All estimates are on a carcass-weight basis except canned meats which are in terms of product.

44.—Supply, Distribution and Consumption of Meats and Lard, 1949-53, with Average for 1935-39

NOTE.—Estimates for 1949-51 are not strictly comparable with those for 1952 and 1953, since revisions necessitated by the 1951 Census of Agriculture have not yet been completed for earlier years.

[1] Edible meat excluding offal. [2] Basis cold dressed carcass weight. [3] Includes edible offal of beef and veal. [4] Quantity small; included with beef. [5] Edible meat excluding fats and offal. [5] The positive changes represent deductions from the available supply during a given year and therefore are subtracted; similarly, negative changes represent an increase in disappearance. [7] Includes rendered pork fat.

Section 5.—Agricultural Statistics of the Census

Summary agricultural statistics, recorded by the Census of 1951, are given in the 1954 Canada Year Book, pp. 438-447. They include information relating to occupied farms classified by province, tenure and size, farm operators classified by age and province, farm machinery, farm electrification and farm areas. More detailed information may be obtained from The Ninth Census of Canada, 1951 *Census* Vol. VI, Parts I and II.

Section 6.—International Crop Statistics

Tables **45** and **46** are based on estimates published in March 1954 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1952 and 1953, with averages for the years 1945-49, in the leading countries of the world.

45.—Estimated Acreages and Production of Wheat Harvested in 1952 and 1953 in Specified Countries, with Average for 1945-49

---

[1] Estimated totals, which in the case of production are rounded to millions, include allowances for any missing data for countries shown and data for producing countries not shown. [2] Includes Albania, Bulgaria, Czechoslovakia, Eastern Germany, Hungary, Poland and Roumania. [3] Figures for the periods shown are not strictly comparable since figures for 1952 and 1953 include allowances for non-reporting areas not included for the earlier period shown, but are included in estimated total for Asia.

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

Land is the basis of the Canadian economy and wise use of the land is the foundation of good forestry. In addition to providing the greatest amount of the most usable woods as economically as possible, good forestry will aid in maintaining agricultural lands against drought and erosion; will continuously protect water-catchment areas and assure supplies of water; will furnish cover for game and fur-bearing animals; and will give Canadians and their tourist guests opportunity for recreation which only the forests can provide.

Section 1.—Forest Regions†

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence eight fairly well defined forest regions may be recognized. These are shown on the accompanying map and are listed as follows, with the relative proportion of the total area of all forest regions occupied by each:—

Region	*Percentage of Total Regional Area*
Boreal	80·1
Great Lakes-St. Lawrence	7·9
Subalpine	4·0
Montane	2·5
Coast	2·2
Acadian	2·0
Columbia	0·9
Deciduous	0·4
TOTAL	100·0

---

* Sections of this Chapter that deal with forestry and forest administration have been revised in the Forest Economics Section, Forestry Branch, Department of Northern Affairs and National Resources. Sections dealing with forest and allied industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

† A more detailed discussion of forest regions is given in Bulletin No. 89, *A Forest Classification for Canada*, by W. E. D. Halliday, obtainable from the Forestry Branch, Department of Northern Affairs and National Resources, Ottawa. Accounts of variations in Canadian physiography, climate, etc., are given in Chapter I of this volume.

Boreal Forest Region.—This region comprises the greater part of the forested area of Canada, forming a continuous belt from the Atlantic Ocean westward to the Rocky Mountains and northwestward to Alaska. The white and black spruces are characteristic tree species; other prominent conifers are tamarack, which ranges throughout the region, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the region is primarily coniferous, there is a general admixture of broad-leaved trees, such as the white birches and poplars; these play an important part in the central and south-central portions, particularly as the region grades into the Grassland Formation of the prairies. In turn, the proportion of barrens (non-forested rock, muskeg and tundra) increases in the northern parts until the region finally merges into the Tundra Formation. In the southern parts of the eastern portions of the region there is considerable intrusion of species from the Great Lakes-St. Lawrence Forest Region, such as the white and red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Great Lakes-St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River valley is a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broad-leaved species common to the Deciduous Forest Region, such as sugar maple, red maple, northern red oak, basswood and white elm. Other species with wide range are the eastern white cedar, the largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplar and white birch intrude from the north, and red spruce from the Acadian Forest is abundant in certain eastern portions of the Region.

Acadian Forest Region.—The greater part of the Maritime Provinces contains a forest closely related to both the Great Lakes-St. Lawrence and the Boreal Regions. The characteristic species is red spruce, with which are associated balsam fir, yellow birch and sugar maple, with some red pine, white pine, beech and hemlock. Other species of wide distribution are the black and the white spruces, northern red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar and jack pine, however, are restricted almost entirely to the western half of the Region.

Deciduous Forest Region.—A small portion of this forest, widespread in the eastern United States, is found in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broad-leaved trees common to the Great Lakes-St. Lawrence Forest Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broad-leaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut, and pignut hickories, and scarlet, black and pin oaks. In addition there are black walnut, sycamore and swamp white oak, which are largely confined to this Region. Conifers are few, mainly scattered white pine, tamarack, red juniper and hemlock.

Subalpine Forest Region.—This is a coniferous forest found on the higher slopes of the mountains east of the Coast Ranges. It extends northward to the divide between the drainage of the Skeena, Nass and Peace Rivers, and that of the Stikine and Liard Rivers. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region, from which the black and the white spruces and aspen intrude, more particularly in the northern parts. There is also some entry of Douglas fir from the Montane Forest, and western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine and limber pine.

Columbia Forest Region.—A large part of the Kootenay River valley, the upper valleys of the Thompson and Fraser Rivers, and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species. Associated with these are Douglas fir, which is of general distribution, and, in the southern parts, western white pine, western larch and grand fir. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the region. Towards lower elevations in the west and in parts of the Kootenay Valley, the forest grades into the Montane Region and, in a few places, into the Grassland Formation.

Montane Forest Region.—This region occupies a large part of the interior uplands of British Columbia as well as part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States, and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions, to which it is restricted. Douglas fir is found throughout but more particularly in the central and southern parts. Lodgepole pine and aspen are generally present, the latter being well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region become important constituents in the northern parts, together with white birch. The Boreal white spruce also enters here. Extensive bunch grass and sage brush communities of the Grassland Formation are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with the addition of Douglas fir in the south and Sitka spruce in the north. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common towards the timberline. Western white pine is found in the southern parts. Broad-leaved trees, such as black cottonwood, red alder and broadleaf maple have a limited distribution in this region. Arbutus and garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent mainland. These are species that have entered from the Montane Forest in the United States.

Section 2.—Native Tree Species

There are more than 150 tree species in Canada, of which 31 are conifers, commonly called 'softwoods'. About two-thirds of these softwoods are of commercial importance. Of the large number of deciduous or 'hardwood' species, only about 10 p.c. is of any great commercial value to the wood-using industries. About 82 p.c. of the volume of merchantable timber is made up of softwood species.

The dominant species existing in each forest region are given in Section 1, pp. 440-442. Detailed information is contained in Forestry Branch Bulletin No. 61, *Native Trees of Canada,** published by the Department of Northern Affairs and National Resources.

Section 3.—Forest Resources

The forested area of Canada (exclusive of Labrador) is estimated at 1,485,870 sq. miles, or 42 p.c. of the total land area.

Over 44 p.c. of the total forested area of Canada is classified as "non-productive", i.e., incapable of producing crops of merchantable wood. However, these forests do provide valuable protection for drainage basins and shelter for game and fur-bearing animals.

Of the productive portion of the forested area, 578,000 sq. miles are considered to be now accessible for commercial operations. Further details are given in Chapter I, Table **1**, p. 20. The economically inaccessible productive forests contain much valuable timber suitable for lumber and pulpwood. At present it is not economical to conduct cutting operations on these areas but, as low-cost methods of transportation are developed, as accessible forested areas become depleted, and as the demand for wood products increases, these inaccessible productive forests will be brought progressively into commercial development. Owing generally to less favourable climatic conditions, the productive capacity of these inaccessible timberlands is expected to be lower than that of the accessible areas now being logged.

The predominant part that lumber and other forest products have played in the development of Canada has resulted in a widespread tendency to evaluate the forests in terms of timber alone. A growing realization of the economic importance of the non-timber values, however, is bringing about increasing recognition of their true value and thus developing a broader concept of forestry.

Inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the Forestry Branch of the Department of Northern Affairs and National Resources compiles the National Forest Inventory. The latest estimates of the total stand of timber, by province and region, appear in Table **1**. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

[1] Cubic volumes do not include wood in stumps and unusable tops.

[2] Excludes Labrador.

Forest Land Tenure.—Private individuals or corporations own 7 p.c. of Canada's total forest land. The remaining 93 p.c. is still in the possession of the Crown in the right of the Federal Government or of the provinces: rights to cut Crown timber under lease or licence have been granted on 15 p.c. of the total forest land. Some of the unalienated land has already been logged and has reverted to the Crown but, in the main, it is located in the inaccessible and less accessible areas.

Farm woodlots on the 623,000 farms across Canada cover about 22,780,000 acres (Census of 1951)—13 p.c. of the total farm area and over 6 p.c. of the total accessible productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Further, the woodlots of eastern Canada are, in general, highly productive because they lie in the southern parts of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

[1] Gatineau Park (70 sq. miles) and Quebec Battlefields Park (0·36 sq. mile) are under federal jurisdiction but are not considered National Parks and are excluded from the Quebec total figures. [2] Provincial Park development is carried out in two provincial forest reserves having a total area of 1,668 sq. miles; duplication is omitted from totals. [3] Included in the National Parks figure.

Section 4.—Forest Depletion

A general account of forest depletion and increment is presented in this Section. Details of the scientific control of those influences that account for wastage, viz., forest fires, insect pests, etc., are dealt with in Section 5, Forest Administration.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1942-51, together with preliminary data for 1952, are given in Table 4. Of the total depletion in the ten-year period, 81 p.c. was utilized and 19 p.c. was destroyed by fire, insects and disease. The utilization of 2,934,609,000 cu. feet comprised 39 p.c. logs and bolts, 32 p.c. pulpwood, 26 p.c. fuelwood, and the remaining 3 p.c. miscellaneous products. Approximately 6 p.c. of the logs and bolts and pulpwood were exported in unmanufactured form.

The more efficient utilization of timber that has been cut is one factor related to forest depletion. There is little doubt that in the past too high a percentage of the sawn log was discarded. Changes of great significance have been taking place in the uses of wood, permitting the utilization of sizes and qualities previously considered unmerchantable. The development of the manufacture of rayon, cellophane and numerous other products in the cellulose industry is rapidly extending the use of wood. The increasing demand for plastic-wood products, fibre board and laminated wood is resulting in greater use of inferior classes of wood, and therefore in the more complete utilization of forest resources and in the elimination of much waste.

4.—Average Annual Forest Depletion during the Ten-Year Period 1942-51 and 1952

Item	Usable Wood		Percentage of Depletion	
	Average 1942-51	1952^{p}	1942-51	1952^{p}
	M. cu. ft.	M. cu. ft.		
Products Utilized—				
Logs and Bolts—				
Domestic use	1,127,126	1,365,560	31·2	31·5
Exported	13,611	9,834	0·4	0·2
Pulpwood—				
Domestic use	777,568	986,776	21·5	22·8
Exported	162,128	211,927	4·5	4·9
Fuelwood	752,578	841,229	20·9	19·4
Other products	101,598	129,837	2·8	3·0
Average Annual Utilization	**2,934,609**	**3,545,163**	**81·3**	**81·8**
Wastage—				
By forest fires	175,453	289,656	4·9	6·7
By insects and disease	500,000	500,000	13·8	11·5
Average Annual Wastage	**675,453**	**789,656**	**18·7**	**18·2**
Average Annual Depletion	**3,610,062**	**4,334,819**	**100·0**	**100·0**

Although all the utilization and most of the wastage occurs on the currently *occupied productive* forest area of approximately 257,000 sq. miles (where commercial cutting is concentrated), it is from the *accessible productive* forest of 578,000 sq. miles that the forest production of the future will be obtained. Merchantable timber on the accessible productive forest is estimated at 275,268,000,000 cu. feet, of which approximately 125,000,000,000 cu. feet may be considered to be located on the occupied area. The average annual depletion for the decade 1942-51 amounted to 1·3 p.c. of the *accessible* productive volume or to 2·9 p.c. of the volume on the *occupied* portion. The depletion for 1952, however, shows an appreciable increase over the average, being 1·6 p.c. of the *accessible*, and 3·5 p.c. of the *occupied* portion. These rates are indicative of the fact that in many localities severe over-cutting is taking place, whereas the annual growth is not being used on the less accessible portions of the productive forest. This situation emphasizes the urgent need for increased protection and management of the commercial forests, if forest growth is to balance depletion and the forest industries are to maintain their dominant place in Canada's development.

Section 5.—Forest Administration

Subsection 1.—Administration of Federal and Provincial Timber-Lands*

The major portion of the forest resources of Canada are owned and administered by the provincial governments. The Federal Government is responsible for the administration of those of the Yukon and Northwest Territories and on other federal lands such as National Parks and Forest Experiment Stations. About 97,000 sq. miles are privately owned by individuals or corporations.

The general policy of the Federal Government and the provincial governments has been to dispose of the timber under their jurisdiction by means of licences to cut, rather than by the outright sale of timber-land. Under this system the Crown retains ownership of the land and control of the cutting operations. Revenue is received in the form of Crown dues or stumpage (either in lump sums or in payments made as the timber is cut); ground rents and fire-protection taxes are collected annually. All these charges against the timber and land may be adjusted at the discretion of the governments concerned.

The three Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island practically all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia, 73 p.c. of the forest land is privately owned; holdings exceeding 1,000 acres make up more than one-half of this area. In New Brunswick, 50 p.c. is under private ownership. The percentages of privately owned forest land in the other provinces are as follows: Newfoundland, 16 p.c.; Quebec, 6 p.c.; Ontario, 8 p.c.; Manitoba, 7 p.c.; Saskatchewan, 7 p.c.; Alberta, 7 p.c.; and British Columbia, 4 p.c.

Provincial lands suitable for growing trees are set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province of Canada.

Over 2,000 professionally trained foresters are employed in Canada by the Federal Government, by provincial forest services, or by pulp and paper and lumber companies. The staff working for the Federal Government are almost entirely engaged in research; those employed by the provincial governments devote their attention mainly to the administration of provincial forest lands; while those in private industry, although they do some research, are concerned chiefly with forest management and protection.

Federal Administration.—The Canada Forestry Act provides, among other things, authority for the operation of forest experiment stations and forest products laboratories, some of which have been in existence for many years. The Act also authorizes the granting of federal assistance to the provinces to enable them to improve the management of their own forests.

Agreements with the provinces provide that the Federal Government pay one-half the cost to the provinces of completing and maintaining their forest inventories during a five-year period. They provide also for payments by the Federal Government to the province amounting to $10 per thousand trees planted and $1 per acre seeded by provinces on unoccupied Crown lands, provided that the share of this program paid for by the province itself is maintained at or above the average level of the previous three years. The Federal Government also agrees to pay one-fifth of the cost to the province for establishment and operation of new forest nurseries.

---

* More detailed information is given in the 1954 Canada Year Book, pp. 458-465.

Between Dec. 4, 1951, and June 12, 1952, the Federal Government entered into agreements with all the provinces, except Quebec and Newfoundland, based generally on the above provisions. In the years ended Mar. 31, 1952 and 1953, federal payments to the provinces under the forestry agreements amounted to $802,405 and $1,023,706, respectively, after deduction of refunds made by the provinces with respect to interim claims. In 1953-54, actual payments totalled $1,170,189.

Inventory programs under the agreements were estimated to be two-thirds completed by the end of March 1954. The progress in forest inventories is given in Table **5**.

5.—Progress in Forest Inventories to Mar. 31, 1954

Project	Estimated Area to be Covered	Area Covered Prior to Agreements	Area Covered Under Agreements		
			Prior to Mar. 31, 1953	Year Ended Mar. 31, 1954	Total
	sq. miles	sq. miles	sq. miles	sq. miles	sq. miles
Ground control surveys	402,000	107,000	122,000	76,000	305,000
Air Photography—					
Small scale	686,000	246,000	158,000	173,000	577,000
Medium scale	449,000	201,000	113,000	65,000	379,000
Totals, Air Photography	1,135,000	447,000	271,000	238,000	956,000
Base Maps—					
Small scale	663,000	74,000	153,000	202,000	429,000
Large scale	339,000	199,000	40,000	19,000	258,000
Totals, Base Maps	1,002,000	273,000	193,000	221,000	687,000
Field surveys for forest data	935,000	167,000	249,000	118,000	534,000
Interpretation of photographs	1,021,000	163,000	242,000	207,000	612,000
Forest maps	1,021,000	85,000	184,000	163,000	432,000
Inventory reports	1,021,000	51,000	121,000	322,000	494,000

The total number of trees planted under the reforestation agreements up to Mar. 31, 1954, exceeded 30,000,000. In 1953-54, planting programs were carried out in five provinces to the extent of 9,386,000 trees. Details of over-all planting and seeding operations by provinces are shown in Table **6**.

6.—Reforestation under the Forestry Agreements to Mar. 31, 1954

Province	Trees Planted		Area Planted		Area Seeded	
	Year Ended Mar. 31, 1954	Total to Mar. 31, 1954	Year Ended Mar. 31, 1954	Total to Mar. 31, 1954	Year Ended Mar. 31, 1954	Total to Mar. 31, 1954
	No.	No.	acres	acres	acres	acres
Prince Edward Island	29,000	48,000	25	38	—	—
Nova Scotia	36,000	59,000	35	59	—	—
Ontario	8,533,000	22,668,000	8,533	22,667	—	6,000
Manitoba	670,000	1,292,000	587	1,093	—	—
Saskatchewan	118,000	567,000	81	425	188	357
British Columbia	—	5,745,000	—	6,090	—	—
Totals	**9,386,000**	**30,379,000**	**9,261**	**30,372**	**188**	**6,357**

The Federal Government has also agreed to pay to the Province of New Brunswick, during a three-year period ending Mar. 31, 1956, one-third of the cost up to a maximum of $3,000,000 of an aerial spraying operation against the spruce budworm in the northern part of the Province. The Government of New Brunswick is also contributing one-third of the cost, the remaining third being contributed by the forest industries in the area affected. In the early summer of 1953, more than 1,000,000 gallons of DDT insecticide were sprayed over an area of about 2,800 sq. miles. The Federal Government contributed $1,000,000 to the cost of the budworm spraying operation in 1953-54. Subsequent studies by forest entomologists of the Federal Department of Agriculture showed that the average mortality of budworm larvæ from spraying ranged from 87 to 99 p.c. Damage to foliage was light enough so that only a small part of the area needs to be resprayed to save it from further damage by the budworm.

Recent Advances in Forest Management Programs.—During recent years an increasing interest has been shown by governments and industry alike in programs to stimulate production of forest products and, at the same time, perpetuate Canada's forest resources. Most of the provinces require timber operators on Crown lands to submit forest inventories of their cutting areas and to prepare management plans covering operations for a stated period of time.

Saskatchewan has taken an effective step towards conservation of its forest resources by curtailing the annual cut to an amount approximating 5 p.c. of the estimated stand of merchantable spruce saw-timber in each particular district.

In British Columbia the granting of forest-management licences under authority of an amendment in 1947 to the British Columbia Forest Act will, undoubtedly, lead to a great improvement in forestry practice in that Province. Continuity of tenure, which is essential to the successful operation of a sustained-yield program, is assured by these licences under which the Minister of Lands and Forests of British Columbia may enter into long-term timber agreements with operators. At the end of 1953 a total of 14 Management Licence contracts were in effect, with an allowable annual cut on a sustained-yield basis of 70,800,000 cu. feet; and there were 25 Public Working Circles over the whole province, with an annual allowable cut of 133,700,000 cu. feet; making a total on sustained-yield equal to more than 25 p.c. of the total forest production of the Province. In 1948 a further amendment to the British Columbia Forest Act established a Forest Development Fund of $2,500,000 for the building of forest roads and bridges intended for the economical harvesting of forest products.

The Provinces of Nova Scotia, New Brunswick and Ontario have each appointed an Advisory Committee composed of representatives of the provincial government, the forest industries and other organizations interested in the welfare of the forests, so that forest problems can be discussed and a concerted effort made to solve them for the benefit of all. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on a community basis.

The use of air photographs for forestry purposes is a comparatively new field in which progress has been made in both research and practice (*see* p. 454). By the use of such photographs the Forestry Branch of the Department of Northern Affairs and National Resources has been continuing its work on the aerial forest mapping of federally administered lands and other territories. Forest inventory maps, for example, were prepared from air photographs of the Eastern Rockies Forest Conservation Area and data were collected on the ground to support the interpretation of the photographs. The development of instrumental aids in forest photography and in interpretation is being continued.

Timber Control.—The formal control of timber by the Timber Controller, as established during the war years, ceased on Mar. 31, 1950. Since that date the only controls have been those exercised through licences for the export of logs and pulpwood, required under the authority of the Export and Import Permits Act.

Subsection 2.—Forest Fire Protection

The Federal Government is responsible for fire protection in the forests under its administration—chiefly those of the Yukon and Northwest Territories, the National Parks, Indian lands and Forest Experiment Stations. Each of the provincial governments, except that of Prince Edward Island, maintains a fire-protection organization co-operating with owners and licensees for the protection of timbered areas, the cost being distributed or covered by special taxes on timber-lands.

In each province, except Prince Edward Island, provincial legislation regulates the use of fire for clearing and other legitimate purposes and provides for the closing of forests to travel or work during dangerous periods. The Province of Quebec has organized a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs, which co-operate with those of the Board of Transport Commissioners and the Provincial Government. The latter contributes towards fire-suppression costs and also pays for the protection of vacant Crown lands lying within the area of the associations' activities. In the Province of Newfoundland, responsibility for the protection of most licensed timber-lands is vested in the lessees; the Newfoundland Forest Protection Association, maintained jointly by government and industry, carries out certain important fire-control functions.

The provincial services of forest fire protection along railway lines are assisted by the Railway Act, administered by the Board of Transport Commissioners. The Board has wide powers relating to fire protection along railway lines under its jurisdiction. Certain officers of the various forest authorities are appointed ex officio officers of the Board of Transport Commissioners and co-operate with the fire-ranger staffs which the railway companies are required to employ under the Railway Act.

In many districts in Canada, radio-equipped aircraft are used to good effect for the detection and suppression of forest fires. Where lakes are numerous, seaplanes or flying boats can be used for fire detection and for transportation of fire-fighters and their equipment to fires in remote areas especially. In Ontario, water bombing of small fires is regularly practised and in some districts helicopters are being used in fire suppression work. Equipment and supplies are sometimes dropped by parachute to isolated fire crews and, in Saskatchewan, parachutists are employed to fight fires that are difficult to reach.

Fire detection in more settled areas is carried out from lookout towers fitted with telephone or radio for reporting, and fire-fighting crews and equipment are maintained at strategic points. These crews, when not engaged on fire-suppression duties, are employed on the construction and maintenance of roads, trails, telephone lines, fire guards and other improvements.

Portable gasoline pumps and linen fire hose are important items of equipment and may be carried by canoe, motor-boat, automobile, aircraft, pack-saddle or back-pack. The pumps provide hose pressures of up to 200 lb. per sq. inch, depending upon the elevation above and distance from the water supply; hose lines of over a mile in length are frequently used. Small hand-pumps supplied by 5-gallon portable containers are also effective. Bulldozers and ploughs are commonly used for fire-line construction and trucks fitted with water tanks and power pumps are employed for the control of fires adjacent to roads. Despite the provision of these mechanical aids, more than half of all fires are fought with hand tools.

The various government forest authorities conduct forest conservation publicity work independently and in co-operation with the Canadian Forestry Association. Since its beginning in 1900, the CFA has played an important part in securing popular co-operation in reducing the fire hazard. By means of its magazine, which has a large circulation, by railway lecture cars and motor-trucks provided with motion-picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of Canada. Efforts are made through the schools, by specially appointed junior forest wardens and other means, to educate the younger generation on the value of the forests and on the seriousness of the devastation caused by fire and the means of preventing such devastation.

Forest Fire Statistics.—During 1952 there were 5,101 forest fires compared with 4,529 in 1951 and an average for the period 1942-51 of 5,121. However, the average size of forest fires in 1952 and in 1951 was smaller than the average for the ten-year period, the area burned in the two later years being 991,196 acres and 896,426 acres, respectively, and the ten-year average being 1,622,364 acres. The estimated values destroyed in 1952 were 20 p.c. less than in 1951 and 5 p.c. less than the average; the actual cost of fire fighting was 39 p.c. less than in 1951 and 37 p.c. more than the average.

Although April and May were unusually dry months for Newfoundland and April was dry in Nova Scotia and fire occurrence was then highest above normal, the greatest fire damage occurred in these Provinces in July. In New Brunswick and Quebec over 80 p.c. of the damage occurred in the July-August period and no serious fire situation developed during the exceptionally dry autumn. Weather conditions in Ontario were generally favourable for fire protection and the acreage burned in that Province was less than one-tenth of the annual average for 1942-51; most of the fires occurred in April and May. Manitoba's one hazardous period was in April, but Saskatchewan had a very lengthy dangerous season. Most fires in Saskatchewan occurred in April and May but some were reported in November and December. The northeastern districts of Alberta suffered a severe drought during April and May when almost all of the Province's fire damage occurred. In British Columbia hazard conditions were not extensive but periods of high danger developed west of the Rockies in May and over the whole province in July and August. The fire period in the Northwest Territories extended from April to early August but cool damp weather in Yukon Territory precluded danger of fire there.

7.—Summary Statistics of Forest-Fire Losses, 1952, compared with Ten-Year Average, 1942-51

Item		Provinces[1]		Yukon and Northwest Territories, 1952
		Annual Average 1942-51[2]	1952	
Fires under 10 acres	No.	3,752	4,031	23

Subsection 3.—Research in Forestry

The chief responsibility of the Federal Government in the field of forestry is to carry out research in problems affecting Canada's forests and their development, conservation and more effective utilization. To this end, forest research and forest products research facilities have been greatly expanded throughout Canada during the past five years. The Federal Government, several provincial governments, the Pulp and Paper Research Institute of Canada, the four universities with faculties of forestry, and a number of the larger industrial companies conduct research in these fields. The Forestry Branch of the Federal Department of Northern Affairs and National Resources conducts research in forest economics, silviculture, management, forest inventory methods, forest fire protection, and in forest products. An extensive program of research is under way on the experiment stations and on other lands, where an increasing proportion of the total effort is being expended in co-operation with provincial authorities and industry.

Forest Research.—Research in silviculture and management has been concentrated since World War II upon problems of regeneration, growth and stand development, and harvest cutting methods. A regeneration survey extending from the Rocky Mountains to the Atlantic Coast has provided information on the status of regeneration on cut-over and burned lands. This has been followed by intensive work of a more fundamental nature to assess the factors responsible for the success or failure of regeneration and, by empirical tests of practical cutting methods, seed-bed treatments, and seeding and planting methods, to obtain reproduction. Studies are made of the growth, yield and successional changes in the most important forest types. Systems of classifying forest sites so as to assess their effective growth, development and long-term productivity are being devised. Research in tree breeding is also carried on for artificial propagation by selection and development of superior strains. Research in forest management is concerned with the application of silviculture, regulation of cut, and protection so as to maintain forests at their highest production levels. Many of the research studies in silviculture and forest management are conducted co-operatively with provincial forest services and wood-using industries.

Forest fire protection in Canada is a vital problem and is therefore a major concern of federal and provincial forest authorities. Forest fire protection of Crown lands is the responsibility of provincial forest services but federally owned forest lands, such as the National Parks, the Forest Experiment Stations, and lands in the Yukon and Northwest Territories, are the responsibility of the Federal Government. Other organizations responsible for forest fire protection within their respective territories are the forest protective associations in Quebec and company organizations dealing with privately owned forest land in Nova Scotia and British Columbia. In forest fire research, the Federal Forestry Branch is working towards full co-operation with the provincial forest services in achieving the best methods of forest fire protection. The leading contributions of the Branch have been in the field of fire-hazard research and in the development of equipment and techniques for fire fighting. Increasing attention is being given to research relating to such fields as fire-control planning, visible area mapping, detection and communications equipment, and the development of fuel-type classification methods and mapping techniques. A number of provincial forest-protection services are also engaged in research activities. Notable advances have been made in several provinces in the development of forest communications equipment, the dropping of supplies to fire fighters by parachute, and the design of mechanical fire-fighting equipment.

Research in forest inventory methods is of increasing importance because of the greatly expanded inventory programs being conducted in most provinces. Data from air photographs are correlated with field work to develop new techniques of timber estimating, which is being facilitated by the use of stand-volume tables. Various methods of field sampling are being investigated and compared. Research is being continued in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types. Construction of suitable photogrammetric and other scientific apparatus includes those required by the forestry tri-camera method of air photography, which has been developed to provide maximum forestry information at minimum cost, and the shadow-height calculator, constructed to facilitate the determination of tree heights from shadows in air photographs.

Research in forest economics is concentrated on problems associated with the production of wood in the forest. These problems are concerned with land use, land tenure, taxation, forest legislation and administrative techniques, forest management, forest labour and the valuation of forest lands. Economics research also involves continued study of the broad developments in forest industries.

Forest Biology.—The Division of Forest Biology of the Science Service, Federal Department of Agriculture, undertakes investigations dealing with the biology and control of insects and diseases affecting forest and shade trees. The Zoology Unit maintains ten regional laboratories at strategic points across the country. The Forest Pathology Unit operates six branch laboratories. An insect disease laboratory was recently established at Sault Ste. Marie, Ont., for fundamental research on virus, fungi, and bacterial diseases of insects.

A special article dealing with Noxious Forest Insects and Their Control appears in the 1947 Year Book, pp. 389-400. A detailed account of the activities in forest pathology in Canada may be found in the 1948-49 Year Book, pp. 416-417.

Forest Products Research.—The following special article outlines the history of the forest products laboratories and deals in detail with their current activities.

THE FOREST PRODUCTS LABORATORIES OF CANADA*

The Laboratories.—In 1913, in co-operation with McGill University, the Forest Products Laboratories of Canada were established and located on the campus of the University at Montreal, Que. By that time, the widespread and diversified nature of Canada's forest industries, their significance to the national economy and the vital importance of export markets had clearly indicated that, in the main, forest products research should be a national rather than a provincial function.

A second laboratory was established in 1917 on the campus of the University of British Columbia at Vancouver, B.C., for the primary purpose of conducting aircraft research entailing the testing and use of considerable quantities of high-grade Sitka spurce, available only on the West Coast.

By 1927, the expansion of research facilities, an increasing staff of research personnel and the coincident addition of test and laboratory equipment had made it necessary to find larger quarters for the Montreal Laboratory and, with the exception of the Pulp and Paper Unit,† the Forest Products Laboratory was moved to its present quarters at Ottawa.

Both Laboratories are now staffed and equipped for work in all the principal phases of research pertinent to wood and its uses, including certain aspects of the wood chemistry field not related to the manufacture of paper. The activities of the two Laboratories are generally similar although the work at Vancouver is weighted in favour of British Columbia species. Research activities are so integrated that findings are valid wherever they are applicable in Canada or elsewhere. However, development has not reached its zenith. Scientific and mechanical equipment is being constantly improved and every endeavour is made to recruit and maintain a professional and technical staff capable of rendering efficient service in the varied and extensive pattern which must be followed in forest products research.

---

* Prepared by J. H. Jenkins, Chief of the Forest Products Laboratories of Canada, a Division of the Forestry Branch, Department of Northern Affairs and National Resources.

† Pulp and paper research is carried out by the Pulp and Paper Research Institute of Canada, at Montreal. This Institute is a non-profit corporation to which the Canadian Government makes an annual grant. Its management is vested in a Board of Directors composed of representatives of the Canadian Pulp and Paper Association, McGill University and the Canadian Government.

The work of the Laboratories is organized to provide a continuing program of fundamental research which will constantly add to the growing volume of basic data on record. A large number of investigations and studies in the fields of applied research are also undertaken to determine the results of the numerous factors affecting conversion and utilization. Research work also extends to the field of utilization; basic and exploratory investigations are directed towards determining methods, processes and new uses which would result in a more complete and effective utilization of the original wood substance available from the tree.

There is, as well, a fairly substantial volume of work performed for the Canadian Armed Services and other government departments and in the carrying out of tests and investigations requested by industry. Industrial interest in forest products research is constantly growing and this awareness of the value and importance of research findings is reflected by the large increase in enquiries received by the Forest Products Laboratories.

A carefully selected library provides background information and knowledge of the work in other forest research organizations as well as essential reference material. Regular contact is maintained with forest products research organizations throughout the world and the continuing exchange of information is considered of major importance. As research data are published in many languages it is often necessary to translate original material, a field in which much duplication of effort existed in the past. As a result of an arrangement made at the Forest Products Pre-Conference of the British Commonwealth Forestry Conference held at Ottawa in 1952, translations are now supplied to other countries and information is exchanged as to translations in progress.

Each year a Program of Work is circulated so that research workers in other fields will be aware of the particular projects under study at both the Ottawa and Vancouver Laboratories. Most of the research work is national in scope but certain projects are carried out primarily to meet the requirements of areas with problems of a unique nature.

More generally stated, the Forest Products Laboratories of Canada aim their activities so as to provide a desirable balance between the essential work of fundamental studies—to provide basic data—and investigations in the domain of applied research. In this manner it is believed that the forest products industries are best served, and that long-term and continuing benefits to the national economy will be of highest value.

The results achieved in the past forty years have provided an impressive fund of knowledge on the properties and uses of Canadian wood species. These accumulated data serve to assess problems arising out of utilization and are of high value in planning additional research.

There is recognition that the value of research lies mainly in the application of its findings in the practical fields of commercial production. The administration, therefore, endeavours to maintain a close liaison with forest products industries so that, aware of their needs, it can co-operate in finding solutions to production problems as well as assess and evaluate new methods, processes, and equipment.

It is realized that, in a competitive economy, efficiency plays a dominant role and considerable work has been undertaken to provide dependable data on various phases and factors pertinent to conversion and utilization. Among such studies are those related to sawmilling, veneer cutting and plywood production, the use of radio-frequency heating, and the recovery of sawmill and logging residue.

In the fields of chemical utilization, wood structure, wood preservation and pathology, and timber mechanics and engineering, specialists and technicians—with suitable laboratory equipment and following recognized research techniques—are actively engaged in recording and interpreting research findings, and thus they expand knowledge applicable to forest products research.

Results of the Laboratory investigations are analysed and appraised and supply the subject matter of many reports and publications so that findings may be available and research knowledge disseminated where it can best serve. A large number of publications, available on request, have been issued on various phases of forest products research.

The Laboratories are represented on many technical committees including: the Fundamental Research, the Testing and Control, and the Camp Heating Committees of the Canadian Pulp and Paper Association; the Paint, Furniture, Packaging, Paper Products and Building Board Technical Sub-committees of the Canadian Government Specification Board; Structural Timber, Laminated Construction, Plywood, Millwork and Packaging Committees of the Canadian Standards Association; the Materials and Design Committees of the National Building Code; the Research co-ordinating Committee on the Utilization of Mill Waste for Pulpwood; the Wood Committee, American Society for Testing Materials; the Preservatives Committee, American Wood Preservers Association; and the Preservation Committee, B.C. Plywood Manufacturers' Association.

Organization of Research.—The plan followed at both Laboratories is to group related research within separate Sections composed of several Units. Each Unit is responsible for a particular phase of research work and is in charge of a specialist in that field. Training of and specialization by the technical personnel rounds out Unit organization and ensure a high degree of accuracy in research investigations. A Section Head, with technical qualifications and administrative ability, is in immediate charge of the work of a Section, under the control of the Laboratory Superintendent. A brief description of the work of the five Sections follows:—

TIMBER MECHANICS

Timber Engineering: Determination of the mechanical and physical properties of Canadian woods; timber fabrication; new forms of wood construction, including laminations and arches; timber fasteners; technical data for use in timber standards and building codes.

Plywood: Problems incident to the production of veneers and the manufacture of plywood, including testing and studies of improved manufacturing techniques, properties of adhesives, bonding techniques and durability of bonds;

basic studies on the use of high-frequency heating and its uses, including investigations on its application to bonding in gluing operations and the production of curved plywood shapes.

Containers: Generally, the design and testing of containers and the assessment of their suitability for carrying intended loads; the study of handling and transit hazards; supplying of technical data for container codes and studies aimed at improving container design.

Wood Preservation and Pathology

Preservation: Treatment of wood with preservatives by pressure and non-pressure methods; ground-line treatments; service tests; chemical analyses of treated timber; determination of the efficacy of new preservatives; treatment of timber against attacks by insects and marine organisms; durability tests on treated wood by laboratory techniques and in service installations.

Pathology: The study of wood-destroying and wood-staining fungi, including their identification and their effect on the serviceability of timber, and methods of control; identification and life history of fungi, stain, and moulds; durability tests of untreated wood by wood-soil and other accelerated laboratory techniques.

Wood Paints and Coatings: Investigations on the use and composition of paints and other forms of surface coatings applied to wood; durability of exterior coatings on wood; effect of various factors, such as timber species, moisture content of wood, and resin content on surface coatings; fire-retardant paints and coatings.

Wood Utilization

Logging and Milling: Studies pertinent to the production of lumber and other primary manufacturing products; investigation of production methods and equipment with a view to more complete utilization; research into possible conversion to economic use of material now discarded; investigation of the benefits from closer integration of wood-using industries; operation of a research sawmill. Of necessity, these studies are undertaken in logging operations and at the sawmills and factories of co-operating industrial companies which have been selected as being representative of the manufacturing region or forest area being investigated.

Secondary Wood-using Industries: Research into the secondary wood-using industries, aimed at developing more effective utilization and reducing incident waste; investigations initiated with a view to determining new outlets for Canadian woods, and particularly for hardwoods; studies of forest products economics.

Lumber Seasoning: Investigations into the theory and techniques of lumber seasoning, including air-drying, kiln-drying, and other methods; research and experimentation to secure data for the preparation of kiln-drying schedules; studies pertinent to seasoning practices in industry aimed at developing improved methods of drying; organized kiln-drying and lumber seasoning courses of instruction.

Wood Chemistry

Chemical Utilization and Organic Chemistry: Investigations and experimental production of fibreboard, wallboard, and binder board from wood waste; studies aimed at the production of improved wood; research into the production of tannins from the bark of Canadian wood species; studies on the chemical composition of wood and on the chemistry of wood, carbohydrates, lignin, and bark; research and experimentation into the production and properties of cellulose from sawdust; investigations of the extractives from wood.

Microbiology: Investigations and experimentation into the possibilities of utilizing wood waste by microbiological means, including research with wood digesting organisms and the microbiological decomposition of wood.

WOOD STRUCTURE

Structure and Uses: Research into wood structure and its effect on the properties and behaviour of wood in service; investigations into the microstructure of Canadian timber species and the effects and causes of irregularities in wood structure; studies on the reaction of wood structure to the penetration of chemicals, and on the use of chemicals to improve dimensional stability.

Anatomy-Growth Relationship: Co-operative studies with the Forest Research Division aimed at determining the effects of various natural growth conditions and of silvicultural practices on wood quality.

Wood Identification: Work related to the identification of wood and maintenance of a reference collection of woods of the world and the recording of data pertinent to wood identification.

Past Research.—Since their formation, the Forest Products Laboratories have followed a plan intended continually to expand the record of basic data on the properties and uses of Canadian timber species. Close contact with the work of other forest products research organizations throughout the world has provided additional and valuable information.

An extensive program of timber-testing has resulted in the accumulation of data on the mechanical properties of all Canadian commercial timber species. These tests were carried out on carefully selected clear specimens and on timbers of structural sizes. From these data, basic and working stresses have been computed and strength tables prepared for use in designs.

There have been two distinct approaches to research into the durability of various Canadian woods. Pathological studies have determined the types, conditions of occurrence and the deterioration caused by different fungi. These studies have extended to logs, pulpwood and other material in the round, through phases of their conversion and use. Results obtained have been interpreted and serve as a basis for preventive measures to eliminate or greatly reduce fungi infection. The second phase has dealt with the treatment of wood with preservatives to determine their suitability for use for various treating methods and to record the increased service life obtained. Data on increased durability obtained through the use of preservatives are now on record for many Canadian timber species.

The design and service value of containers have been investigated and records of resistance to handling and transit hazards are now available for containers of many types. Studies included re-design of containers in use and new designs for specific loads, as well as careful review of construction to determine the most efficient production of acceptable packaging.

The air-seasoning and kiln-drying of lumber have received intensive study and experimentation, and drying schedules and piling methods have been developed. These investigations have resulted in the accumulation of data pertinent to the seasoning of Canadian species of board and structural sizes, and the drying of specialized stock. Kiln-drying and seasoning courses are held each year at Vancouver and Ottawa.

Progress in research is frequently largely dependent on the recording of data secured from actual operations. Field studies have been made at a number of sawmills, on logged areas, and in industrial plants in order to provide factual records of production with a view to determining the factors responsible for efficient operation. Planning and selection of representative sites for these studies permit application of results on a broad basis.

Recently a Research Sawmill of the circular headrig type has been installed at the Ottawa Laboratory. It is instrumented to provide for the control, study and recording of the many variables that affect lumber recovery and quality and is providing fundamental data on conversion processes.

Recognition of the considerable waste of valuable wood substance through residue occurring in log conversion and other manufacturing processes has resulted in many studies directed to reducing such waste to a minimum and to finding economic uses for the various types of residue. Investigations in the field of waste utilization have included reprocessing and chemical conversion and, recently, research in possible new production through microbiological means. A considerable volume of data has been placed on record relative to the chemical composition and chemical processes for the utilization of wood substance. In this field, production of tannins, determination of extractives, recovery of lignin from waste pulp liquors, and hydrolysis have been the principal avenues of research.

The various processes of veneer and plywood production have received much attention and the available records contain extensive data of a fundamental and applied nature. A commercial-size rotary veneer lathe, with necessary ancillary equipment, and instrumented for research, has been in operation at the Ottawa Laboratory. Investigations include the determination of the suitability of Canadian woods, not now used, for cutting to veneers and for the production of plywood, as well as the efficiency and suitability of various glues and bonding processes.

The use of radio-frequency power in the wood-using industry, and particularly in wood-bonding operations has been intensively studied. Fundamental data have been obtained and practical applications, including the production of curved plywood shapes and building panels, have been developed. Data on the dielectric properties of Canadian wood species have been recorded.

Thus, past research of the Forest Products Laboratories has been so oriented as to procure basic and applied data on the complex factors involved in all conversion processes, and to determine those conditions which produce the most satisfactory results from wood in service.

Future Research.—Fundamental research into the mechanical, physical and chemical properties of Canadian wood species will continue in order to expand and complement data now on record and to keep under continual review the basic factors that affect utilization and satisfactory service.

To keep abreast of or, whenever possible, ahead of industrial trends, investigations will be undertaken to assess or develop new techniques and new approaches to conversion and utilization practices. Field and laboratory studies will continue to be directed to the more economical use of available wood substance and to means of reducing to a minimum incidental waste or residue. Research will be extended to Canadian wood species not now considered as commercial timbers, and to determining the suitability for additional uses of timbers now in commercial production. Special attention will be given to problems related to the handling, transportation and chipping of slabs and edgings for the manufacture of pulp.

Intensive research into logging will continue to explore possibilities for higher extraction and limitation of waste. The Research Sawmill studies will comprise determination of the variables affecting production as well as the development of machinery and methods for reducing manufacturing costs.

Studies of the chemistry of Canadian woods, chemical utilization, wood laminations, veneers and plywoods, dielectric heating, preservation, and wood rots will form the subject matter of numerous research projects.

Research findings will continue to be reported in Forest Products Laboratories of Canada publications, prepared to contain the maximum of useful information. The Laboratories also will continue to provide, on request, specific data in response to industrial inquiries. This sometimes necessitates additional investigation to supplement the data on record.

In a developing economy, increasingly dependent on research findings for expansion and orientation, it is difficult accurately to forecast research requirements. However, the original and continuing policy of the Forest Products Laboratories of Canada is to carry on research work of a fundamental nature and at the same time to adapt investigations and studies so that they can best meet the needs of industry.

Section 6.—Forest and Allied Industries

This Section is concerned with the many industries employed in the hewing down of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw material for sawmills, pulp and paper mills and for the wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture and all the vast range of industries that use wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of Canada's export trade and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Subsection 1.—Woods Operations

In connection with operations in the woods, it should be borne in mind that the forests not only provide the raw materials for the sawmills, pulp mills, wood distillation, charcoal, excelsior and other plants, but also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products which are finished in the woods ready for use or exportation. A number of minor forest products help swell the total, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark.

It has been estimated that operations in the woods during the logging season in 1952 gave employment amounting to 44,795,000 man days and distributed $158,000,000 in wages and salaries.

10.—Value of Woods Operations, by Product, 1947-52

Product	1947	1948	1949	1950	1951	1952
	$	$	$	$	$	$
Logs and bolts	205,259,855	215,108,932	207,789,335	253,649,547	316,027,115	304,262,790

[1] In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the rest of Canada 200. Other factors: pulpwood 85, fuelwood 80, hewn railway ties 5, poles and piling 15, fence posts 1·2 and wood for distillation 80.

Subsection 2.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood, reports of which were compiled for 1952, was 8,283 as compared with 7,934 for 1951. Mills sawing less than 15,000 ft. b.m. are excluded but account for less than one-half of one per cent of the total lumber production. Employees numbered 60,931 and wages and salaries amounted to $135,540,707. The logs, bolts and other materials and supplies of the industry were valued at $299,506,832, the gross value of production was $568,023,148 and net value $261,325,619.

Lumber production in Canada reached its maximum in 1951 at 6,948,697,000 ft. b.m. Average values were fairly uniform until 1916, but increased rapidly from 1917 to 1920, to decline gradually during the following years to the lowest level for the entire period in 1932. With the exception of 1938 and 1949, increases took place each year from 1933 to 1951; a decrease of 2 p.c. occurred in 1952.

13.—Quantity and Value of Lumber Production and Value of All Sawmill Products, by Province, 1951 and 1952

Lumber Exports.—Exports of planks, boards and square timber are given in Chapter XXII, Foreign Trade.

Subsection 3.—The Pulp and Paper Industry*

The manufacture of pulp and paper has been the leading industry in Canada for many years and the post-war development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in value of production, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output five times that of any other country and provides over one-half the world's newsprint needs. Canada is also the world's greatest wood-pulp exporter and stands second only to the United States as a producer of pulp. Thus, this Canadian industry, with four-fifths of its output moving abroad, ranks as one of the major industrial enterprises of the world.

There are three classes of mills in the industry. In 1952, 34 were making pulp only, 26 were making paper only and 68 were combined pulp and paper mills.

---

*A special article on the pulp and paper industry appears in the 1952-53 Year Book, pp. 467-475.

The industry includes three forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp-mills. Less than one-fifth of the pulpwood cut in Canada is exported in raw or unmanufactured form and a large portion of such exports is cut from private lands.

16.—Production, Consumption, Exports and Imports of Pulpwood, 1943-52

Note.—Figures for earlier years will be found in the corresponding table of previous Year Books.

[1] Given in terms of rough or unpeeled wood. [2] Newfoundland included from 1949.

Pulp Production.—The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species of wood for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are also a number of 'cutting-up' and 'rossing' mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is measured by the cord (4′ by 4′ by 8′ of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood, and one cord of peeled pulpwood 95 cu. feet.

Of the total 1952 pulp production, 74·3 p.c. was made in combined pulp- and paper-mills for their own use in manufacturing paper. The remainder was made for sale in Canada or for export. About 58 p.c. was groundwood pulp and almost 18 p.c. unbleached sulphite fibre, these being the principal components of newsprint paper. Bleached sulphite, bleached, semi-bleached and unbleached sulphate, soda fibre, semi-chemical, other grades and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of the 8,968,009 tons of pulp produced in 1952 entailed the use of 11,640,191 cords of rough pulpwood valued at $334,824,403 and the equivalent of 317,556 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butt cores, etc.) valued at $8,242,632. The total value of materials used in the manufacture of pulp was $389,372,852.

[1] Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia. [2] Newfoundland included from 1949.

Pulp Exports.—The chief market for Canadian newsprint and pulp is the United States. Prior to the War this market alone absorbed about 85 p.c. of the pulp exports and 80 p.c. of the newsprint exports. In 1945, the proportions were 76 p.c. and 83 p.c., respectively, and in 1952, 82 p.c. and 91 p.c., respectively.

World Pulp Statistics.—Figures of production, exports and imports of pulp for certain countries of the world have again become available after the interruption caused by World War II and are shown for 1952 in Table **20.** It is estimated that these countries produce approximately three-quarters of the world supply of pulp.

20.—Production, Exports and Imports of Pulp, by Leading Countries, 1952

(Source: United States Pulp Producers Association)

Country	Production	Exports	Imports
	'000 tons	'000 tons	'000 tons
Canada	**8,897**[1]	**1,941**	**55**
United States	16,464	212	1,938
Finland	2,071	949	—
Norway	1,191	590	8
Sweden	3,379	1,797	—

[1] Slightly lower than DBS figures given in Table 17, p. 466, owing to the exclusion of certain types of pulp by the Association.

Paper Production.—During 1952 there were 94 establishments producing paper and paper board in Canada as compared with 92 in 1951. In addition to newsprint, Canadian mills have a highly developed production of fine paper, wrapping paper, tissues, paper board and other cellulose products.

World Newsprint Statistics.—Since 1913, Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table **24**; 1939 figures are included for comparative purposes. The six countries listed accounted for 80 p.c. of the estimated world production in 1952, Canada contributing about 54 p.c.

24.—Estimated World Newsprint Production and Exports, by Leading Countries, 1939, 1951 and 1952

[1] Slightly lower than DBS figures given in Table 21, p. 467, owing to the exclusion of certain paper not classed as newsprint by the Association.

Statistics of the Combined Pulp and Paper Industries.*—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries, for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This further converting of paper within the pulp and paper industry itself represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage, there were altogether 128 mills in operation in 1952. The employees numbered 57,803 and their salaries and wages amounted to $225,353,327. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total value of materials and supplies used in the industry as a whole can be considered as amounting to $497,046,828 in 1952, $483,014,009 in 1951, and $373,882,762 in 1950; the gross value of production as $1,157,887,657 in 1952, $1,237,897,470 in 1951, $954,137,651 in 1950; and net value of production, $584,101,072 in 1952, $679,257,743 in 1951 and $511,142,983 in 1950.

The pulp and paper industry is one of the leading single manufacturing industries in Canada. In 1952, it was first in net value of production, in gross value of production and in salaries and wages paid, and second in employment. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, generally speaking, pulp and paper are Canada's main commodities—usually more important than wheat and far more important than nickel. Newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.† The United States market absorbs, annually, about 85 p.c. of all pulpwood exports and over 80 p.c. of the pulp and the paper shipments of Canada. About one-half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or pulp imported from Canada.

Subsection 4.—The Veneer and Plywood Industries‡

The production of hardwood plywood in Canada is largely confined to the eastern provinces. The changes in manufacturing methods applied to hardwood plywood have resulted in its adaptation to many new uses, particularly to attractive wall finishes for homes and other buildings, flush doors, radio and television cabinets and other home and office furniture.

---

* *See* Chapter XV for further particulars regarding the pulp and paper and paper-converting industries.

† For reasons given in Section 1, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.

‡ Prepared by the Forest Products Laboratories, Forestry Branch, Department of Northern Affairs and National Resources, Ottawa.

Softwood plywood is produced almost solely in British Columbia. Douglas fir is the type most commonly manufactured because of the availability of large-diameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for the production of a product that has become almost indispensable to the construction industry—for wall panels, concrete forms, roofing, sheeting, house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies, trailers, power-driven and other types of watercraft; for box panels and crate linings, case goods and core-stock for furniture; for plywood-faced doors and for many other uses.

The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood, which is now being used for furniture, radio cabinets and similar products. The possibilities of this development are becoming more widely appreciated.

Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of finishes. Exports of veneer and plywood produced in Canada have increased in value from $969,256 in 1938 to a high of $19,024,625 in 1953.

25.—Veneer and Plywood Produced for Sale, by Type, 1949-52

Subsection 5.—The Wood-Using Industries

The wood-using group comprises thirteen industries,* other than sawmills and pulp mills, using wood as their principal raw material. Most of these industries obtain from the sawmills the wood they transform into planed and matched lumber, boxes, barrels, furniture, caskets and other manufactured or semi-manufactured products, but the veneer and plywood and excelsior industries usually manufacture their products direct from logs and bolts.

---

* Furniture; sash, door and planing mills; veneer and plywood; hardwood flooring; boxes, baskets and crates; wood-turning; coffins and caskets; cooperage; woodenware; lasts, trees and wooden shoefindings; beekeepers' and poultrymen's supplies; excelsior; and other wood-using industries.

This wood-using group does not include every industry into which wood enters as a raw material but only those producing commodities whose chief component is wood. There are a number of industrial groups in which wood is an important raw material, such as the manufacture of agricultural implements, musical instruments, etc., and others, such as the manufacture of machinery, in which wood is necessary but only in comparatively small proportions.

Wood is used indirectly in the manufacture of all-metal products, as, for example, in the use of wooden patterns and wooden foundry boxes in making metal castings. Wood in the form of barrels, boxes and other containers also enters into the distribution of commodities of all kinds.

In 1952, the wood-using group, comprising 4,184 establishments, gave employment to 69,537 persons and paid out $163,890,274 in salaries and wages. The gross value of its products was $599,606,383 and the net value $272,829,694.

The importance of secondary industry in providing employment will be appreciated when it is noted that the number of employees in the wood-using group was more than 69,000, as compared with sawmills with approximately 61,000 employees and pulp and paper with about 58,000 in 1952.

26.—Wood Used by Wood-Using Industries, 1950-52

Item		1950	1951	1952
Sawn lumber	M ft. b.m.	1,893,861	1,981,239	2,049,314
	$	120,604,966	138,846,528	145,056,681

	$	17,087,654	19,314,591	20,537,175
Other wood used	$	3,959,258	4,101,186	4,480,753
Totals	$	**160,044,940**	**188,277,770**	**196,175,575**

Subsection 6.—The Paper-Using Industries

The paper-using group comprises three industries* engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials, but, under the standard industrial classification adopted by the Dominion Bureau of Statistics in 1948, they are grouped separately.

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in some other industry. This occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to some treatment to fit it for some definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes, laminated wallboard and other commodities.

---

* Paper boxes and bags; roofing paper; and miscellaneous paper goods.

In recent years the manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which compete very favourably with the wooden crates and packing cases used formerly. Small attractive paper containers for use in the retail trade are growing in favour with the purchasing public and constitute an important branch of the paper-using industries.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Wood-fibre building boards, some of which are produced by lamination in the paper-using industries, are now used extensively in construction, especially for insulating purposes, replacing lumber and wood lath.

The growth of the paper-using industries in Canada since 1923 reflects these developments. In 1923, the 152 establishments in this group employed 6,870 persons, distributed $7,442,102 in salaries and wages and produced goods valued at $31,760,948. In 1952, these industries comprised 415 plants, provided employment for 25,162 persons whose earnings totalled $67,328,956 and produced products worth $352,261,134.

Subsection 7.—Printing, Publishing and Allied Industries

The printing trades group is made up of five closely related industries: printing and publishing, comprised of publishers who operate printing plants; printing and bookbinding, including general or commercial printers and bookbinders; lithographing, comprised of plants specializing in that process; engraving, stereotyping and electrotyping, including photo-engraving; and trade composition or type-setting for printers. A sixth industry covering publishers of periodicals who do not print their publications has been included since 1949. Although, strictly speaking, these publishers are not manufacturers, they are closely related to the printing trades which produce the plates, cuts, etc., and print newspapers, magazines, directories, year-books, almanacs, house organs and other periodicals for them.

In 1952, the printing trades employed 59,916 persons whose earnings totalled $177,373,133. Their output was valued at $449,508,758 and the raw materials used and services received cost $138,809,747.

Periodicals valued at $184,719,634 accounted for 45 p.c. of the value of printed matter and other products, daily newspapers alone contributing $132,531,769. The value of periodicals is made up of $130,160,344 received from advertising and $54,559,290 received from subscriptions and sales of publications. In addition, the 1,405 publishers in the sixth industry reported revenues of $26,888,494 from advertising and $8,710,218 from sales of publications.

Section 1.—Canada's Mineral Resources

The tremendous expansion that has taken place in Canada's mineral industry from the end of World War II to 1951 is reviewed in the 1952-53 Year Book, pp. 476-495. The information is brought up to June 1953 in the 1954 Year Book, pp. 482-506, and is continued to June 1954 in the following article.

DEVELOPMENTS IN CANADA'S MINERAL INDUSTRY, JULY 1953 TO JUNE 1954*

In 1953, three years after it had attained the billion dollar goal in the annual value of its output, Canada's mineral industry had covered one-third of the intervening distance to a new goal of two billion dollars, preliminary value of output in 1953 being $1,331,211,503. Whether this rate of growth would continue, and the industry would reach this new goal in another six years, was somewhat uncertain at the close of the present review period (June 1954). Year by year since 1944 when the output was valued at $485,819,114 the industry has been setting new records. Rising metal prices have contributed notably during the post-war period to the annual production increases. Copper, for instance, rose from an average of 12·67 cents a pound in 1946 to a post-war peak average of 29·93 cents in 1953; nickel from 31·50 cents to 55·87 cents in the same period; zinc from 7·81 cents in 1946 to a post-war peak average of 19·90 cents in 1951; and lead from 6·75 cents to 18·40 cents in the same period. The main contributing factor, however, has been the increase in crude-oil production following the discovery of the Leduc field in Alberta in February 1947. The developments that followed resulted in an increase in the value of crude-oil production from $14,989,052 in 1946 to a record $198,111,542 in 1953. Actually, with the major exceptions of gold and coal, all branches of the mineral industry have shared in the post-war expansion.

---

* Prepared under the direction of Marc Boyer, Deputy Minister, Department of Mines and Technical Surveys, as follows: Introduction, Metals and Coal by G. H. Murray, Chief, Editorial and Information Division, and Mrs. M. J. Giroux of the Editorial Staff; Industrial Minerals by M. F. Goudge, Chief, Industrial Minerals Division; and Petroleum and Natural Gas by Dr. G. S. Hume, Director General of Scientific Services.

However, there has been some slowing in the tempo of activity. The prices of lead and zinc have declined 5·23 cents and 7·94 cents a pound, respectively, from the post-war peak averages of 1951 and this has led to a curtailment of operations at several properties. Production of iron ore, asbestos, and coal was declining in the closing months of the review period, July 1953-June 1954. Also, many of the projects connected with the pre-production development of mineral deposits, such as the construction of the 360-mile railway to connect the Quebec-Labrador iron-ore deposits with the port of Sept Iles, are now completed or are nearing completion and the stimulus they provided in mining expansion has largely spent its force.

Thus, the outlook for the mineral industry was less bright at the end of the review period than it had been the previous year or two, though it was far from unfavourable. Some monthly production figures have been rising, others declining, but the over-all productive potential of the industry has been increasing steadily. Crude oil pipelines and related facilities completed or under construction will be capable of handling 600,000 bbl. daily, close to three times the present rate of output. Moreover, the known reserves are considered to be sufficient to maintain this higher rate for many years. Within a decade Canada will be capable of producing 30,000,000 or more tons of iron ore a year compared with the output of 6,501,060 tons in 1953. The base-metal industry has undergone notable improvement as a result of recent discoveries and of expenditures totalling upwards of $300,000,000 during the past several years in plant extension and in the construction of new units. Completion of a project at Winnipeg and another near Quebec City will give the cement industry a total capacity of 25,700,000 bbl. a year, compared with 22,500,000 bbl. early in 1953. There has been a corresponding increase in the productive capacity of the asbestos industry as a result of mill construction and the development of new deposits. In the search for oil on the western plains tremendous quantities of natural gas are being disclosed, part of which will be flowing eastwards to Ontario and Quebec within a few years should present plans materialize.

The fact is that in the past ten to fifteen years Canada has been finding it has a mineral estate richer by far in resources than had been previously estimated. The development of this estate is still in a comparatively early stage, for as yet large areas remain wholly unexplored, or have been only partly explored for minerals. The development is being expedited by the use of air transportation in the outlying areas and by the demonstrated willingness of mining and exploration companies to take the necessary risks in expending large amounts on the search for and development of deposits.

The potentialities of this expanding mineral estate are indeed great and, although the aforementioned goal of two billion dollars is possibly more than six years away, it is by no means visionary. The indications are that iron-ore output alone will have reached a value of $400,000,000 a year within a decade and that crude petroleum may equal or even exceed that amount. Actually, a combined value of a billion dollars a year for the two minerals does not appear far distant. Metal production, exclusive of iron ore, has already reached nearly $700,000,000 in annual value and a substantial increase in demand and the resultant higher prices could well raise this amount by 10 to 20 p.c., taking into account the increasing productive potential of the metal-mining industry. The non-metallic minerals exclusive of crude oil and natural gas but including coal, were valued at $413,785,000 in 1953 and, again, the industries concerned are capable of considerably larger output than at present. Figures on the value of output of uranium are not published but it is evident from recent developments and from the interest being shown in the search for deposits that Canada's position as a leading source of supply is assured for years to come. This is particularly important in view of the developing uses of atomic energy in industry.

The following articles on the metals, the industrial minerals, crude petroleum and natural gas, and coal that follow, shed much further light on the potentialities of the mineral industry and provide informative accounts of the principal developments during the review period. They do not, however, deal with developments in Yukon Territory and the Northwest Territories as these are covered separately at pp. 24-25.

The Metals

Probably the most noteworthy developments in metal mining during the review period were the completion of the 360-mile railway into northern Quebec-Labrador which opens the way to the establishment of a great new iron-ore industry in Canada, and the discovery of important base-metal deposits in the Manitouwadge area north of Lake Superior in northwestern Ontario. Of great significance, too, were the strides made by Gaspe Copper Mines Limited in building up a new copper-mining operation in Gaspe, which is expected to get under way late in 1954, and the marked growth in iron-ore mining operations in the Steep Rock area of northwestern Ontario.

Production of metals in 1953 declined $19,000,000 from the 1952 value to $708,913,000, because of lower lead and zinc prices and of prolonged labour strikes in the Porcupine gold camp of Ontario and in the Noranda area of Quebec. However, the results of an enhanced production potential were seen, in part, in the increase of 23 p.c. in the volume of output of iron ore during 1953, of 20 p.c. in silver output, 17 p.c. in lead, 7 p.c. in zinc and 2·4 p.c. in nickel. Several new sources of metal production were opened up. Manitoba joined the list of nickel producers with the entry into production of the Lynn Lake nickel-copper deposits. In northern Saskatchewan the commencement of production at the Crown-owned Ace-Fay property in the Beaverlodge area served to underline Canada's importance as a producer of uranium. In Quebec, the first production of copper and gold came from the Chibougamau area with the start of operations by the Opemiska Copper Mines (Quebec) Limited. Meanwhile, in northeastern New Brunswick developments in the Bathurst area point to the eventual establishment of a large-scale base-metals industry.

Accounts of developments in metal mining on a regional basis follow.

British Columbia.—British Columbia with its great wealth of minerals is Canada's second largest metal-producing province. Although declines in the prices of lead, zinc and gold have caused a temporary slackening in metal-mining activity, interest in the Province's mineral potentialities has remained at a high level as evinced by the widespread exploration being carried on, particularly in northern areas, and by various developments under way, such as the steady building up of substantial tungsten and iron-ore industries.

British Columbia's wealth of water-power resources is playing a vital role in the expansion of metal-mining activity in the Province. This is readily seen in the scope of operations of the Consolidated Mining and Smelting Company of Canada Limited, the Province's metal-mining giant, which now has a total output of 400,000 h.p. The latest addition to its hydro power was made by the Company in March 1954 when it set into operation the first two units, of 105,000 h.p. each, of its new $35,000,000 Waneta power plant on the Pend d'Oreille River. The availability of water-power resources has also made possible the huge Kitimat aluminum project, where initial production started in 1954. A projected use of these same resources which will greatly benefit metal mining both in the Province and elsewhere is planned by Frobisher Limited and Quebec Metallurgical Industries Limited. These companies have been surveying the water-power resources of Yukon Territory and northern British Columbia and plan on establishing metallurgical industries in those northern areas for the treatment of ores from Canadian and world-wide sources.

British Columbia in 1953 accounted for 78 p.c. of the Canadian tonnage of lead produced and 47 p.c. of the zinc. Most of the output comes from the Sullivan mine of Consolidated Mining and Smelting Company near Kimberley, the largest lead-zinc-silver mine in the world. The Company is Canada's largest producer of silver and the only Canadian producer of antimony, indium and tin. It also produces bismuth and cadmium as by-products. The remainder of the Province's metal output is comprised mainly of copper, gold, iron ore and tungsten.

The continued decline in lead and zinc prices resulted in a steady decrease in the value of British Columbia's mineral output from a record $176,279,000 in 1951 to $160,741,000 in 1953. Eighteen producers have suspended operations; several have reduced operations considerably, one of these—Canadian Exploration Limited—having cut the milling rate at its Jersey mine by one-half; and several have postponed opening up new properties pending an improvement in the lead and zinc prices. Despite this, the Province's output of lead increased 48,000,000 lb. over 1952 to 307,178,000 lb. in 1953, and zinc increased 27,000,000 lb. to 375,538,000 lb. Values, however, were down, lead declining almost $1,500,000 to $40,471,000 and zinc $16,000,000 to $44,914,000. On Jan. 1, 1954, Consolidated Mining and Smelting Company reduced its production of refined zinc by 25 p.c.

On the brighter side, copper, iron ore and tungsten all showed increased tonnages and values of output in 1953 and strong possibilities for continued growth. Copper production comes from the Granby Consolidated Mining, Smelting and Power Company Limited in the Yale district near Princeton, and from Britannia Mining and Smelting Company Limited, north of Vancouver. Interesting copper deposits are being explored and developed in the northwestern part of the Province in the Unuk area, 20 miles north of Premier, and in the areas east and north of Vancouver.

An important iron-ore industry is taking shape on Vancouver and Texada Islands. Production, all of which is shipped to Japan, comes from the Iron Hill mine of the Argonaut Company Limited, the larger producer, and from three deposits of Texada Mines Limited on Texada Island. Output in 1953 amounted to 988,000 tons valued at $6,745,000, compared with 900,000 tons valued at $5,444,000 in 1952.

The Province is now a leading producer of tungsten concentrates: its output in 1953 was 2,336,000 lb., an increase of 63 p.c. over the 1952 figure. Production comes mainly from the Emerald mine of Canadian Exploration Limited near Salmo. A second producer, Western Tungsten Copper Mines Limited, is carrying out considerable development work in its Red Rose mine near Hazelton.

Most of the silver output comes as a by-product of base-metal operations. Output in 1953 increased 3,700,000 oz. t. over 1952 to 11,480,000 oz. t.

The Province's four gold producers—Pioneer Gold Mines of B.C. Limited and Bralorne Mines Limited in the Bridge River district, the Cariboo Gold Quartz Mining Company Limited in the Cariboo district, and Kelowna Mines Hedley Limited in the Osoyoos mining division—have been carrying out considerable underground development to expand reserves. Near the close of the review period underground development at Bralorne Mines revealed interesting ore at depth. The Province's gold production of 267,000 oz. t. in 1953 was little changed from 1952.

The Prairie Provinces.—Developments during the review period brought Saskatchewan and Manitoba, hitherto minor metal producers, rapidly to the forefront in Canadian mineral production—Saskatchewan as the leading Canadian producer of uranium ore, and Manitoba as Canada's second nickel-producing province. Metal production in the Prairie Provinces, otherwise, continued to be confined to the Flin Flon mine of Hudson Bay Mining and Smelting Company Limited on the Manitoba-Saskatchewan border, and to a subsidiary base-metal producer and two gold producers, all in Manitoba.

In northern Saskatchewan exploration and development activity in the search for uranium in the Beaverlodge area reached new levels. Of the record number of 18,000 claims staked in the Province during 1953, most were in this region. As a result of discoveries made during the review period, the area now extends from the Alberta boundary eastwards for about 80 miles along the north side of Lake Athabasca. Top-ranking developments in the area were the bringing into production of the Crown-owned Ace-Fay mine of Eldorado Mining and Refining Limited in April 1953, and the disclosure of a large deposit of uranium on the property of Gunnar Mines Limited. At the Ace-Fay property the new carbonate leaching plant has an initial capacity of 500 tons. Provision for the treatment of custom ores has been made in the form of underground storage bins and of special crushing and sampling equipment. Throughout the period Eldorado continued to work the nearby RA group of claims and the Bolger claims, along with those leased from Radiore Uranium Mines Limited. Gunnar Mines Limited carried out extensive work on its property in the St. Mary's Channel section of the area. In March 1954 the Company announced plans for the construction of a 1,250-ton mill with output scheduled to start in September 1955. The value of the orebody has been placed by the Company at more than double the June 1953 estimate of $65,000,000. Present reserves are estimated to be sufficient for from 10 to 12 years of operation.

Elsewhere in the Beaverlodge area, private companies explored nine properties by adits or shafts and 47 by diamond drilling. Surface trenching and prospecting were carried out on several others. Some exploratory and development activity was also carried on in the Stony Rapids-Porcupine River, Foster Lake, and Lac La Ronge regions.

Nickel and copper were added to Manitoba's metal output early in 1954 with the commencement of production at the Lynn Lake mine of Sherritt Gordon Mines Limited following one of the most ingenious feats ever performed in the history of

Canadian mining—the stripping and removal of the equipment of a mine and of a whole town to the site of a new industry 144 miles away. Using tractor trains supplemented by air transport the Company during the past few years moved the equipment of its former mine at Sherridon and the houses, school, etc., of the town, numbering to date 183 units, lock, stock and barrel to Lynn Lake. The new industry at Lynn Lake also necessitated the building of a 144-mile railway from Sherridon to Lynn Lake which was completed in November 1953, and the construction of a power plant on the Laurie River, 44 miles south of Lynn Lake. The nickel concentrates from the Lynn Lake mine, and eventually the copper concentrates are to be treated at a refinery now nearing completion at Fort Saskatchewan, 15 miles northeast of Edmonton, Alta. The cost of the whole project without the railway, has been estimated at $46,800,000. The first shipment of nickel concentrates to the Company's new nickel refinery was made early in 1954. Meanwhile, the copper concentrates are being shipped to Noranda, Que., for treatment by Noranda Mines Limited. The daily milling rate at the Lynn Lake mine will be 2,000 tons for an annual production of 8,500 tons of nickel, 4,500 tons of copper, 300,000 lb. of cobalt and 70,000 tons of fertilizer.

Hudson Bay Mining and Smelting Company continued to carry out a vigorous program of exploration and development work on its various properties in Manitoba and Saskatchewan. These include the Schist Lake mine and the Cuprus mine of its subsidiary, Cuprus Mines Limited, both in Manitoba. Late in 1953, Hudson Bay Mining and Smelting Company discovered the Coronation deposit near Phil Lake, 13½ miles southwest of Flin Flon in Saskatchewan. The Company reported a higher output of both copper and zinc in 1953 than in 1952, the output of zinc being 131,190,000 lb., the highest on record and largely attributed to the operation of the new zinc fuming plant in which the Company is treating zinc plant residues as well as current production.

Gold output in the Prairie Provinces comes as a by-product from Hudson Bay Mining and Smelting Company operations and from two gold producers in Manitoba—San Antonio Gold Mines Limited in the Rice Lake district, and Nor-Acme Gold Mines Limited at Snow Lake. Output in 1953 totalled 219,705 oz. t., of which 110,650 oz. t. came from the Flin Flon mine. Silver is also produced as a by-product, output in 1953 amounting to 1,665,000 oz. t. compared with 1,592,000 oz. t. in 1952.

At the time of writing (June 1954) some interest was being shown in an iron-ore discovery 60 miles northwest of the town of Peace River. The discovery was reported as oölitic siderite, a lower grade concentrating ore.

Ontario.—The discovery of what appear to be important deposits of uranium in the Blind River and Bancroft areas of northern and southeastern Ontario, respectively, and of new sources of base-metal wealth north of Lake Superior is probably the most newsworthy feature of metal mining in Ontario during the review period. Coupled with this is the notable headway made in the expansion of the industry in general, and of its nickel and iron-ore production potential in particular.

The value of mineral output in the Province, Canada's leading mineral producer, rose $16,000,000 over 1952 to $460,000,000 in 1953 and represented 34 p.c. of the total value of Canadian mineral production. In metal-mining, Ontario continued to account for all production of cobalt and the platinum metals, a major share of the iron ore, and for over one-half of the copper and gold. With the exception of gold and silver, each of the principal metals and minerals produced in the Province showed an increase in both volume and value of output over 1952.

The continuing high demand for nickel for civilian and defence purposes further stimulated the expansion under way within the nickel-copper industry in the Sudbury area. The International Nickel Company of Canada Limited, the source of 73 p.c. of the world output of nickel, has practically completed the $150,000,000 expansion program commenced almost a decade ago. The program has included the changeover from open-pit and underground mining to almost entirely underground mining, as well as the mining of low-grade ore at its Creighton mine through the utilization of caving, a low-cost bulk mining method. During the review period the Company further raised the capacity of the concentrator at its Creighton mine from 10,000 to 12,000 tons. At the end of 1953, International Nickel Company's nickel-producing capacity was over 275,000,000 lb. a year compared with 250,000,000 lb. at the end of 1952. Capacity will be further increased by output from a $16,000,000 plant now under construction in which nickeliferous pyrrhotite will be treated for the recovery of nickel and high-grade iron ore. The process involved is the result of years of research. It is expected that the plant will eventually produce 1,000,000 tons of iron ore a year.

Falconbridge Nickel Mines Limited, the other major producer, is also expanding its nickel-producing capacity, and during the review period raised its sights to a production of 55,000,000 lb. by 1960. Ore handled in 1953 totalled 1,298,000 tons, an increase of 169,000 tons over 1952, of which 134,000 tons came from three new and independent producers in the area—Milnet Mines Limited, East Rim Nickel Mines Limited and Nickel Offsets Limited. Most of the Company output came from the Falconbridge and McKim mines.

The program involves the bringing in of six new mines, all on the rim of the Sudbury basin—the Falconbridge East, Mount Nickel, Hardy, Boundary, Longvack and Fecunis mines. Three of these, the Falconbridge East, Mount Nickel and Hardy mines, are expected to start production in 1954. The Boundary and Longvack mines have small ore reserves but they will contribute to production until the large Fecunis orebody comes into full operation in 1958. The expansion in refinery capacity at Kristiansand, Norway, includes a new cobalt refinery.

International Nickel Company accounts for 90 p.c. of Ontario's output of copper and Falconbridge Nickel Mines for most of the remainder. Output in 1953 rose to 130,000 tons, an increase of 5,000 tons over 1952.

The Canadian nickel industry is the source of all of Canada's output of the platinum metals which in 1953 amounted to 296,000 oz. t. compared with 280,000 oz. t. in 1952.

A high level of development activity was maintained throughout the review period in Ontario's three iron-ore fields—the Steep Rock and Michipicoten fields in northwestern Ontario which at present account for all of the Province's output of iron ore, and the Marmora field in southeastern Ontario from which initial production is expected late in 1954. Present plans indicate a total output of 12,000,000 tons of iron ore from these fields by 1960. Output in 1953 amounted to 2,529,464 long tons compared with 2,426,330 long tons in 1952. Most of Ontario's output is exported to the United States where it is in demand because of its high grade and good furnace qualities, and most of the ore used in Ontario blast furnaces is imported from the United States.

At Steep Rock Mines Limited, expansion plans are designed to increase production to 5,500,000 long tons annually from an output of 1,301,000 long tons in 1953. Production in 1954 is expected to equal that of 1953. During the review period operations ceased at the Errington open pit and production was started from the Errington No. 1 underground mine and from the Hogarth open pit. A 70-mile highway was built into the area to Atikokan, giving the settlement access by road to Port Arthur, 140 miles to the east.

Caland Ore Company, a subsidiary of Inland Steel Company which has leased the 'C' orebody from Steep Rock mines, has set under way a $50,000,000 program to develop the deposit toward production. The Company's objective is 3,000,000 tons annually which will eventually bring annual production from the Steep Rock area close to 10,000,000 tons.

In the Michipicoten area, Algoma Ore Properties Limited has announced a $13,000,000 four-year program to provide 50,000,000 tons of iron ore or 30,000,000 tons of high-grade sinter over the next 20 years. This is to be done by opening up a new ore zone in the Helen, Victoria and Alexander mines to full operation when present producing levels are exhausted. Output in 1953, which came from the Helen and Victoria underground mines, totalled 1,167,000 long tons of high-grade sinter. Of this, 34 p.c. was shipped by rail to Algoma Steel Corporation at Sault Ste. Marie, Ont., and the remainder to the United States. Estimated production for 1954 is about 1,500,000 tons.

In southeastern Ontario, Marmoraton Mining Company Limited, a subsidiary of Bethlehem Mines Corporation, moved toward initial production, expected in 1954, from its orebody at Marmora about 32 miles east of Peterborough. It proceeded with the stripping of the 120-foot limestone capping over the orebody, the necessary construction for open-pit operations, and the erection of a docksite at Picton on Lake Ontario. The deposit contains an estimated 18,000,000 tons of magnetite ore. This ore is to be concentrated and pelletized, the production objective being 500,000 tons of agglomerated concentrates per year. Output will be shipped to Bethlehem Steel Corporation's mills near Buffalo, N.Y., U.S.A.

Two other iron-ore deposits were in the news during the review period. What appears to be an extensive deposit of magnetite was discovered early in 1954 at Bruce Lake in northwestern Ontario, 30 miles southeast of Red Lake. Iron Bay Mines Limited is exploring the deposit. In Boston Township, six miles south of Kirkland Lake, Jones and Laughlin Steel Corporation took a two-year option on a large low-grade magnetite deposit owned by Dominion Gulf Company with a view to leasing the property if exploratory work proves successful.

Despite the fact that the Government of Canada lowered its incentive price for cobalt in ores and concentrates from the Cobalt area during the first quarter of 1953, the area continues to be the scene of much activity as the search for the metal continues and further extensions are made to mine and mill facilities. Shipments from the area in 1953 were made almost entirely to Deloro Smelting and Refining Company Limited at Deloro, Ont. Up to Mar. 31, 1954, the Company acted as an agent of the Canadian Government under the premium price plan, at which time the plan ended. The United States Government subsequently contracted with the Canadian Government to purchase ores from the Cobalt area at a price commensurate with that in effect prior to Mar. 31, 1954. During the review period, Cobalt Chemicals Limited placed its new custom smelter in the Cobalt area into full production at 15 tons of concentrates daily under the management of Quebec Metallurgical Industries Limited. Cobalt Chemicals was also appointed to act as a Canadian Government agent for the purchase of the area's ores and concentrates.

Most of the silver output comes from the Cobalt area and the remainder as a by-product from International Nickel Company's operations and from the Province's gold mines. Output in 1953 amounted to 5,051,000 oz. t., 22 p.c. below the 1952 figure.

The Province has long been Canada's leading gold producer and in 1953 accounted for 53 p.c. of the output. Production, which came from 38 gold mines in the Patricia, Thunder Bay, Porcupine, Kirkland Lake, and Larder Lake areas and as a by-product from the base-metal mines of the Sudbury area, in 1953 declined 331,000 oz. t. below the 1952 total of 2,183,000 oz. t.—the result of labour strikes in the Porcupine area and of the closing of five mines owing to high costs or depleted ore reserves. However, Kerr-Addison Gold Mines Limited, Canada's leading gold producer, maintained production at approximately 1952 levels while operations in the Thunder Bay and Patricia districts recorded favourable performances.

During the review period, exploratory activity in the search for new sources of mineral wealth was widespread in the Province, a record 27,000 claims being staked in 1953. A number of important finds were made, including interesting deposits of uranium ore in the Blind River and Bancroft areas which focussed attention on the Province as a possible future source of the ore. In the Blind River area the discovery of uranium-bearing ore by Peach Uranium and Metal Mining Limited and Preston East Dome Mines Limited set off a staking rush into the area in the summer of 1953. Staking spread rapidly eastward as far as the Temagami area near North Bay. Around Blind River, several companies carried out considerable development work on their properties and Algom Uranium Mines Limited, a subsidiary of Preston East Dome Mines, and Pronto Uranium Mines Limited, a subsidiary of Peach Uranium and Metal Mining, are each proceeding with development work with a view to production. In southeastern Ontario much staking in the search for uranium has been done, particularly around Bancroft. Centre Lake Uranium Mines Limited has been carrying out underground exploration of its property in the area.

Meanwhile, in the North Bay area, Beaucage Mines Limited, a subsidiary of Inspiration Mining and Development Company Limited, continued to explore its niobium (columbium)-uranium discoveries on and near the Manitou Islands in Lake Nipissing, and to seek an economical means of treating the ore.

Events during the period also pointed up Ontario's potentialities as a base-metal producer. The discovery of a large deposit of copper-zinc ore near Manitouwadge Lake, about 40 miles northeast of Heron Bay on Lake Superior, reported in December, set off Ontario's second great staking rush of the period. Geco Mines Limited, which was formed to explore the property, is planning production from the deposit. Other interesting finds have also been reported in the area. In May, the House of Commons passed a Bill authorizing the construction by the Canadian National Railways of a 27-mile railway line from Hillsport on the main line of the Canadian National Railways into the area at an estimated cost of $3,750,000.

Meanwhile, in the Sudbury area, Ontario Pyrites Company Limited continued to explore its extensive zinc-copper-lead properties 18 miles northwest of Sudbury and research is being carried out on economical methods of extracting the metals from the ore. The Company is planning a daily milling rate of 1,500 tons.

Quebec.—The marked growth of the mineral industry in Quebec during the past few years has gone hand in hand with the Province's great industrial expansion, and has contributed notably to it. Events during the review period brought Quebec to the threshold of production both from the Quebec-Labrador iron ore deposits of Iron Ore Company of Canada and from the copper development of Gaspe Copper Mines Limited in Gaspe. The Province's potentialities as a producer of iron ore were further pointed up by the discovery of other important deposits west of Ungava Bay. Of much significance, too, was the long-awaited commencement of production from the Chibougamau area.

Quebec is next to Ontario in annual value of Canadian mineral production. It is the second largest producer of copper, gold and zinc and the only producer of molybdenite, which is mined in Abitibi East County, and of titanium ore, which comes from the large deposits of ilmenite at Allard Lake in eastern Quebec. The Province also produces silver and lead. Mineral production in 1953 declined $18,000,000 in value from 1952 to $252,826,000 mainly because of the loss in output of copper, zinc and gold caused by labour strikes at Noranda Mines Limited, Quemont Mining Corporation Limited, Normetal Mining Corporation Limited, and Waite Amulet Mines Limited.

Top-ranking development in metal mining in Quebec is the establishment of a great new iron-ore industry in Quebec-Labrador where Iron Ore Company of Canada has already outlined over 400,000,000 tons of iron ore, and where exploration during 1953 brought to light several new deposits of concentrating ore. During the review period the Company proceeded to put the finishing touches on the various phases of the great $250,000,000 project preparatory to initial production in August 1954. The 360-mile railway connecting Sept Iles with Schefferville (Knob Lake) was completed with the exception of the ballasting which will be finished by August 1954. At the northern terminus of the railway the new town of Schefferville is being built up rapidly. Dock construction and the installation of ore-handling machinery at Sept Iles were almost completed. Hydro-electric power for Schefferville and the mine will come from the Menihek dam and power-house, while power for the town of Sept Iles and the ore-handling equipment will come from the Ste-Marguerite power site. Mining will start from the Ruth No. 3 orebody which is close to the railway and which has been stripped for open-pit operations.

Much exploration of the Labrador Trough has been carried on during the past few years. Geological observations from aircraft indicate that the north end of the iron-bearing Trough may be at Diana Bay on Hudson Strait instead of 300 miles to the south as indicated on the most recent geological map of Canada. Several companies have secured concessions or claims in the Trough, some of which were actively explored during the review period. One of these companies, Fenimore Iron Mines Limited, which has recently undergone reorganization, is doing exploratory work on its properties near Ungava Bay. Drilling has outlined extensive deposits of low-grade iron ore which will require up-grading before marketing.

Most of Quebec's base-metal production comes from the western part of the Province, the chief source of output being the copper-gold-silver-pyrite Horne mine of Noranda Mines Limited. The output of copper in 1953 declined 29,881,000 lb. from 1952 to 107,811,000 lb., and of lead, 2,682,000 lb. to 18,358,000 lb. Zinc output increased 11,334,000 lb. to 201,131,000 lb. but decreased by $9,083,000 in value to $24,055,000.

Operations were suspended at the Noranda mine and smelter on Aug. 22, 1953, by a labour strike which lasted until Feb. 13, 1954. The Company treats ore from its Horne mine and custom ores and concentrates from other copper, gold and silver mines. It recovers the copper and precious metals from the anodes at the electrolytic copper refinery of its subsidiary, Canadian Copper Refiners Limited, Montreal East.

During the review period Noranda Mines Limited contracted to bring the Macdonald Mines Limited property in the Noranda area into operation at a daily rate of 1,500 tons for the production of pyrite, zinc and sulphur. West Macdonald Mines Limited, as the new Company is known, is expected to be ready for production by the end of 1955. The ore will be treated in a new $5,000,000 plant to be built at Noranda. Noranda is building a sulphur-iron plant near Welland, Ont., to treat pyrite ore from the Horne mine and concentrates from the West Macdonald property. The Company is also building a plant at the Horne mine in which by-product pyrite will be pelletized for shipment to the Welland plant.

Copper production also comes from the copper-zinc ores of Waite Amulet Mines Limited, Quemont Mining Corporation Limited, Normetal Mining Corporation Limited, and East Sullivan Mines Limited all in western Quebec. In southern Quebec it comes from the zinc-lead-copper Suffield property of Ascot Metals Corporation Limited in the Eastern Townships and the copper-pyrite-zinc mine of Weedon Pyrite and Copper Corporation Limited in Wolfe County. A new producer, Quebec Copper Corporation Limited, commenced production in February 1954 on the former Huntingdon property in the Eastern Townships. In Montmagny County, Eastern Metals Corporation Limited proceeded with the underground exploration of its nickel-copper property. The Company plans to construct a 1,500-ton capacity concentrator. An associate company, Eastern Smelting and Refining Company Limited, was formed in May 1953 to construct and operate a smelter at Chicoutimi for the treatment of nickel and copper concentrates, a substantial quantity of which is to come from the operations of Eastern Metals Corporation.

The long-awaited production of copper and gold from the Chibougamau area began in December 1953 from the 400-ton mill of Opemiska Copper Mines (Quebec) Limited. Much exploratory and development work has been carried out in the area since access to it was provided in the form of a highway from St. Felicien on the west side of Lake St. John a few years ago. Among the companies active in the area are Campbell Chibougamau Mines Limited, which is expected to start production in 1955 from a 1,700-ton mill, and Chibougamau Explorers Limited, which is doing extensive development work on its property.

Hydro-electric power is expected to reach the Chibougamau area by 1955 and a Bill authorizing the construction by the Canadian National Railways of a 294-mile railway line into the area was passed in the House of Commons in May 1954. The railway, estimated to cost $35,000,000, will run from Beattyville, near Barraute, northeast to Chibougamau and then southeast to St. Felicien.

Large new tonnages of copper ore are in the offing of Quebec's metal production as a result of the headway made by Gaspe Copper Mines Limited in preparing its $40,000,000 copper project in Gaspe peninsula for production early in 1955. The new industry is taking shape about 60 miles west of the town of Gaspe where the Company has outlined an estimated 70,000,000 tons of low-grade copper ore. Milling, which will be at a daily rate of 6,500 tons, the largest initial milling rate in Canadian mining history, is to start late in 1954 and will be followed a few months later by smelter production at the rate of 125 tons of copper anodes daily. A town, Murdochville, named after J. G. Murdoch, President of the parent company, Noranda Mines Limited, has been founded with all the services of modern living. Hydro-electric power will be supplied from the Bersimis River power development on the north shore of the St. Lawrence River.

Quebec's largest zinc producer, Barvue Mines Limited, which commenced production in 1952, completed stripping the clay overburden from its large zinc-silver deposit in Barraute township. During the review period it milled over 5,000 tons daily and produced over 5,000 tons of zinc concentrates monthly.

The base-metal industry has a new producer in United Montauban Mines Limited, which commenced the output of zinc and lead concentrates in a new 500-ton mill at its property in Portneuf County just west of Quebec City in August 1953. All zinc concentrates produced in the Province are exported to the United States or to Europe.

Lead concentrates were produced by New Calumet Mines Limited in Pontiac County, Anacon Lead Mines Limited and United Montauban Mines Limited in Portneuf County, Golden Manitou Mines Limited in Abitibi County and by Consolidated Candego Mines Limited in North Gaspe County.

About 73 p.c. of Quebec's gold output comes from 16 producing mines all in western Quebec, and the remainder from base-metal operations, chiefly Noranda Mines and Quemont Mining Corporation in the same area. Lamaque Gold Mines Limited is the largest lode gold producer. Production from the Province declined 95,000 oz. t. from 1952 to 1,019,000 oz. t. in 1953. New production has been added with the commencement of operations at Opemiska Copper Mines in the Chibougamau area where several other companies are actively developing properties. In the Noranda district preparations are being made to carry out underground development on the new gold-mining property of Eldrich Mines Limited.

Silver is recovered mainly as a by-product of base-metal mining, with a small production coming from gold-mining operations. Output in 1953 increased 201,000 oz. t. from 1952 to 4,737,000 oz. t.

Canada's sole producer of molybdenite is Molybdenite Corporation of Canada Limited about 25 miles north of Val d'Or in western Quebec. The Company ceased operations in mid-1953 to expand its mine and mill facilities to 500 and 350 tons a day, respectively. Production was resumed in March 1954.

Meanwhile at Sorel, Quebec Iron and Titanium Corporation continued to operate its experimental smelting plant for the treatment of ilmenite ore from the deposits at Allard Lake. Production is in the form of iron and titanium dioxide concentrate. Shipments from Sorel during 1953 amounted to 141,000 tons of concentrate containing approximately 98,660 tons of titanium dioxide.

The Maritime Provinces.—Highlight of metal-mining activity in the Maritimes during the review period was the proving-up of one of Canada's largest base-metal orebodies at Austin Brook near Bathurst in New Brunswick by Brunswick Mining and Smelting Corporation Limited. The discovery, which was made late in 1952, brought widespread staking in its wake and the disclosure of other important orebodies in the area. In Nova Scotia, Mindamar Metals Corporation Limited, a subsidiary of Dome Mines Limited and the only metal-producer in the Maritime Provinces, has met with encouraging results from underground development work at its mine near Stirling in Richmond County.

The establishment of a base-metals industry at Bathurst has opened up new economic vistas to New Brunswick which has no metal production of any kind. Activity since the discovery has been maintained at a high level, over 40,000 claims being staked in 1953 in one of the greatest staking rushes in Canadian mining. Two major new orebodies were discovered within a five-mile radius of the original discovery at Austin Brook—the Anacon-Leadridge and the Larder "U" properties.

During the review period, Brunswick Mining and Smelting Corporation carried out extensive exploration by drilling on its large zinc-lead-pyrite deposit. In September 1953, the Company acquired the Anacon-Leadridge property to be developed simultaneously with the Austin Brook deposit, both of which are estimated to contain in excess of 60,000,000 tons to a depth of 1,000 feet, averaging 5·3 p.c. zinc and 1·7 p.c. lead. The Company plans to build a 150-ton test mill at the property, designed on the basis of metallurgical tests made in the mineral-dressing laboratories of the Department of Mines and Technical Surveys at Ottawa, and to commence testing early in 1955. Underground development has been started at the Anacon-Leadridge property and the overburden is to be removed from the Austin Brook deposit which will be mined by open pit. The Company plans an initial production of 4,000 tons daily of lead, zinc and pyrite concentrates. In co-operation with the provincial government it has built a 13-mile highway connecting the Austin Brook deposit with Bathurst, and is building a branch line into the Anacon-Leadridge deposit. Power has been brought into the properties from the Nepisiguit Falls power plant.

Keymet Mines Limited had planned on bringing its lead-zinc-silver property, 15 miles north of Bathurst, into production early in 1954 but a fire destroyed the new 200-ton mill in April 1954. Construction of a second mill was started almost immediately and the Company hopes to place the mine into production by the autumn of 1954. Underground work at the property has been under way since January 1953.

Work is continuing on several other properties which were being actively explored in northeastern New Brunswick prior to the Bathurst discovery. These include the lead-zinc property of New Calumet Mines Limited at Orvan Brook, as well as a copper property of Noranda Mines Limited and a lead-zinc-silver property of the M. J. O'Brien Limited interests both in the Rocky Brook-Millstream area. Elsewhere in the Province, older properties, including manganese properties in the Bathurst area, are being re-examined.

In Nova Scotia the value of base-metal production, all of which comes from the mine of Mindamar Metals Corporation near Stirling, increased in 1953 to $3,211,000 from $2,136,000 in 1952 although the mine was in production for only eight months. Output comprised 15,148,000 lb. of zinc, 1,918,000 lb. of copper, 3,800,000 lb. of lead, 247,000 oz. t. of silver, and 3,400 oz. t. of gold. Mill output is approximately 600 tons daily.

Interest in Nova Scotia's base-metal potentialities has heightened as a result of the Bathurst discoveries in New Brunswick, and aeromagnetic and scintillation surveys have been made over much of the Province including Cape Breton Island. In Colchester County, a lead-zinc property is being developed at Smithfield and a lead property is being explored at Gay River. In Cumberland County work is being done on a copper occurrence at Cap d'Or.

Newfoundland.*—The strides made in iron-ore mining in the Province and the resultant marked increase in production attracted major attention during the review period. Output, which comes from Dominion Wabana Ore Limited, wholly owned subsidiary of Dominion Steel and Coal Corporation Limited, and the sole producer, reached a record high of 2,393,000 long tons in 1953, an increase of 916,000 long tons from 1952. The remainder of the Province's metal production, which comprises zinc, lead, copper, silver and gold, comes from the operations of Buchans Mining Company Limited near Red Indian Lake in central Newfoundland. With the exception of silver, the Company's production was considerably below 1952 levels. However, because of the marked increase in the value of iron-ore production, the total value of mineral output in the Province amounted to $33,688,000 in 1953 compared with $32,512,000 in 1952.

At Wabana, the record production achieved by Dominion Wabana Ore was the direct outcome of the extensive modernization and expansion program set under way in 1950 and completed late in 1953. Essentially all operations are submarine, extending in some parts about four miles out under the Atlantic Ocean. The program included the replacement of the cable-hauled tramcars with 22-ton diesel trucks, the interconnection of the Company's three mines, and the installation of the world's longest underground conveyor-belt system. In November 1953, a fourth mine, the Forsyth, was started with the sinking of a new 3,500-ft. slope. Approximately one-half of the output in 1953 was shipped to the United Kingdom, about 31 p.c. to the parent company at Sydney, N.S., and the remainder to Germany. Ore reserves at the Wabana mines have been estimated to be as high as 4,000,000,000 tons.

Buchans Mining Company Limited operated its 1,350-ton mill at an average rate of 950 tons a day. Production continued to come from the Lucky Strike, Oriental and Old Buchans deposits but the newer Rothermere Number One mine was the main source of ore supply. In 1953 the Company shipped concentrates containing 54,945,000 lb. of zinc, 5,525,000 lb. of copper and 35,723,000 lb. of lead compared with 61,034,000 lb. of zinc, 5,918,000 lb. of copper and 36,118,000 lb. of lead in 1952. The zinc, copper and lead concentrates also contained 654,000 oz. t. of silver in 1953 compared with 639,000 oz. t. in 1952 and 7,575 oz. t. of gold compared with 8,595 oz. t. in 1952. The Company is doing underground development work on the new orebodies located by drilling during the past few years.

Widespread exploration was carried on throughout the Island and in Labrador by various companies during the review period. Falconbridge Nickel Mines Limited continued to explore the Notre Dame Bay area where, in 1951, it located a copper property. Field parties of the Geological Survey of Canada discovered an interesting occurrence of scheelite, one of the principal ores of tungsten, in the area during the 1953 field season. Also, the Geological Survey carried out a magnetometer survey over the large area of Newfoundland between the 48th and 49th parallels, where the largest unexplored parts of the Province lie. Exploration in Labrador has revealed interesting occurrences of copper and iron.

INDUSTRIAL MINERALS

Canada's resources of industrial minerals constitute a great source of actual and potential wealth. Entering as they do into practically every phase of industrial activity, industrial minerals are indispensable in the national economy; without abundant supplies, well distributed across the nation, the great strides in industrial development made in the past two decades could not have come about.

---

* Developments in the Quebec-Labrador iron-ore field on described on p. 482.

The term "industrial minerals" includes the various non-metallic minerals (exclusive of fuels) as well as rocks, sands, gravels and clays used for construction purposes.

Within the past ten years, annual production of industrial minerals in Canada has increased nearly four-fold in value from $80,235,946 to $311,063,476 (preliminary figure, 1953), whereas in the same period the value of production of metals has more than doubled to $708,912,835. It should be borne in mind that whereas the dollar value of the refined metals incorporates the cost of fluxes, reagents, and refractories used in their processing, the value of industrial minerals refers, in general, to their value in the crude or semi-processed state. Dollar value, however, tells only part of the story; in tonnage produced, the industrial minerals far outdistance metals and coal combined.

About 50 industrial minerals are produced commercially at present in Canada, and there are many more that can be produced if demand for them arises.

Canadian chrysotile *asbestos* is known for its quality the world over. Production began in 1878 in the Eastern Townships of Quebec and has been continuous ever since. This area is still the world's greatest source of asbestos and reserves are vast. It supplies 95 p.c. of the Canadian production—and Canada supplies nearly 70 p.c. of the world output. In recent years asbestos has been found in several other parts of Canada and is now being produced near Matheson, Ont., and at Cassiar, B.C. A small mill is also being built at an asbestos deposit on the west coast of Newfoundland. Canadian output of asbestos in 1953 was 911,713 tons worth $87,633,124, over 96 p.c. of which was exported. Recent years have witnessed a great program of modernization and expansion among the asbestos producers. One large new company is now planning a mill that will process 100,000 tons of asbestos annually.

Asbestos finds many uses: because of its fibrous nature it can be spun into yarn and made into cloth; mixed with cement, asbestos is used in the manufacture of shingles, pipe, flat and corrugated sheets. It is also used in brake linings, clutch facings and gaskets as well as for electrical insulation and thermal insulation. The shorter grades are used in the manufacture of asphalt floor tiles, in undercoatings for automobiles, as fillers in plastics and paints, and for many other purposes.

Barite or *heavy spar*, as it is sometimes called because of its great weight, is quarried at Walton, N.S., and at Parson and Brisco, B.C. Production in 1953 reached an all-time peak of 248,973 tons valued at $2,316,474. British Columbia barite is white and is used as a filler for paints, rubber, paper, etc., and also in oil-well drilling muds. The deposit at Walton, N.S., which supplies the greater part of the production, is thought to be the largest in the world. The only other deposit of comparable size is found in Germany. It is pink in colour and finds its principal use in heavy drilling muds. These muds must be of high specific gravity in order to overcome the pressures of gas and water in deep wells and also to provide a medium that will float drill cuttings. Most of the barite is shipped by sea for use in the region around the Gulf of Mexico and in South America. Barium chemicals made from barite find wide use in numerous industries. Barite is also used as a heavy aggregate in making the heavy concrete shields used in atomic energy plants.

Fluorspar—a beautiful glassy mineral of yellow, green, red, purple or violet colour—is obtained mainly from the Burin peninsula in Newfoundland where it occurs in veins in granite. Reserves of fluorspar in Newfoundland are among the largest in the world, and have been estimated by the Newfoundland Geological Survey as "considerably in excess of 20,000,000 tons," making the Province one of the world's major sources of this very important mineral. A small production has been obtained for many years from Madoc, Ont., and it was formerly produced at the Rock Candy mine in British Columbia. In 1953, a new occurrence of purple fluorspar was reported on the Alaska Highway at Lower Liard Crossing, B.C. The Canadian production in 1953 reached a new high of 90,078 tons valued at $2,657,104.

Fluorspar is essential to aluminum production, is used as a flux in the steel industry, and is a raw material for the manufacture of hydrofluoric acid which itself has a great variety of uses. Other uses are in the manufacture of glass, enamel, and magnesium metal.

Canada is second among the nations in production of *gypsum*, a mineral composed of hydrous calcium sulphate. It is found in every province except Prince Edward Island and Saskatchewan, and is quarried in Newfoundland, Nova Scotia, New Brunswick, Ontario, Manitoba and British Columbia. Production in 1953 amounted to 3,765,763 tons valued at $7,487,928. Nearly three-quarters of the production is exported, mainly by sea, to gypsum-manufacturing plants along the Atlantic coast of the United States as far south as Florida.

In 1953, National Gypsum (Canada) Limited prepared to open up a very large gypsum deposit near Milford, N.S. Most of the production will be exported to the United States by boat from Dartmouth, N.S. Canada's largest producer is Canadian Gypsum Company Limited which has just completed a large new gypsum manufacturing plant at Montreal, Que., to make plaster, wall board, and lath from Nova Scotia gypsum. The largest manufacturer of gypsum products is Gypsum, Lime and Alabastine, Canada, Limited which operates several plants across Canada.

Gypsum finds its principal use as a construction material in the form of wall plaster, wall board, sheathing board, lath and tile, but quantities are also used for dental plaster, moulding plaster, surgical plaster, Keene's cement, agricultural gypsum, Portland-cement retarder, pottery, plasters and mineral filler.

It is potentially important as a chemical raw material: in some countries gypsum is used, for example, as a source of sulphuric acid but this use is not, as yet, economic on this continent. Associated with the gypsum in most localities are large deposits of anhydrite, or anhydrous calcium sulphate which is not utilized to any extent.

Rocks such as limestone, granite, shale, and sandstone form a very valuable part of the industrial mineral resources of Canada. Found in all parts of the country they are the basis of many industries: building-stone, cement, lime, crushed stone, brick and tile, refractories, silica, and so on. Exact statistics are difficult to obtain but it is estimated that in 1953 more than 32,000,000 tons of rock were quarried in Canada.

Limestone is the most widely quarried and extensively used of all the rocks. In 1953 over 25,000,000 tons were quarried. Practically every known variety of limestone except chalk is available as well as several unusual types such as brucitic limestone, and magnesitic dolomite. Brucitic limestone, found in Quebec, Ontario and British Columbia, contains granules of brucite (magnesium hydroxide) scattered through the limestone matrix. It is quarried near Wakefield, Que., by the Aluminum Company of Canada Limited for the production of magnesia, quicklime, hydrated lime, and agricultural limestone. The magnesia, in turn, is used for the making of basic refractories and magnesium metal, and for various other uses, particularly in agriculture. Magnesitic dolomite is mined at Kilmar, Que., by Canadian Refractories Limited and converted into basic refractory products. In 1953, a large plant was built at Dundas, Ont., by Steetley of Canada, Limited, for the production of a refractory product known as "dead-burned dolomite" from the extensive dolomite deposits in that area. *Building stone* is produced from limestone in Ontario, Quebec and Manitoba. *Marble* is produced in Quebec, Ontario and British Columbia and is available in many of the other provinces. *Crushed stone* for road metal, concrete aggregate, railroad ballast, and numerous other uses is produced in a great many parts of Canada. *Roofing granules* are made from rhyolite, basalt, and slate in Quebec, Ontario and British Columbia.

The *Portland cement* industry, which uses limestone and cement as its main raw materials, is established in seven of the ten provinces. It has been expanding its production facilities steadily in recent years to keep pace with construction activity in Canada and at present has an installed capacity of about 23,000,000 bbl. of cement annually which places Canada well up among the nations of the world on a per capita production basis.

The *lime* industry also has been experiencing rapid growth in the past decade. Production in 1953 was 1,184,963 tons valued at $13,457,648 which is close to the all-time record. The growth of the lime industry was mainly caused by the rapidly growing chemical industry because over 80 p.c. of the lime produced now finds chemical use. Lime is made in all provinces except Nova Scotia, Prince Edward Island and Saskatchewan. Most of the production is marketed in the lump form (quicklime), but hydrated lime, which is a specially slaked dry powder, is steadily gaining in popularity.

Shales and *clays* suitable for the manufacture of brick and tile are found in all provinces and are being widely utilized by the ceramic industry. This is a rapidly growing industry and production to-day is nearly four times as great as it was ten years ago, reflecting, in part, the great activity in construction throughout Canada. Shales and clays that bloat on being heated are now being sought for the production of lightweight aggregates to supply the demand from the construction industry for lightweight building materials. Two new plants to make these products have been built recently and several others are in prospect.

A volcanic rock, known as *perlite*, that expands greatly on heating and yields a lightweight product that is incorporated into plasters and other building materials, has been found in British Columbia and has been quarried at François Lake for use in Western Canada.

The *granite*-quarrying industry is active in Quebec, British Columbia, Ontario, Nova Scotia and Manitoba. In addition to use for building and monumental stone, granite is extensively used for road metal, concrete aggregate, and railway ballast. It is also used in minor quantities for poultry grit and in the making of artificial stone.

Sand and *gravel* together constitute the greatest tonnage of any mineral substance produced in Canada. In 1952, approximately 100,000,000 tons of sand and gravel were used by the construction industry in this country. Owing to increasingly strict specifications, industry is considering the manufacture of sand from rock in order to obtain exactly the kind of sand required and considerable research is being carried on to this end.

Canada shares with Soviet Russia the distinction of being a producer of *nepheline syenite*. This is a quartz-free, white, igneous rock consisting of a mixture of soda feldspar, potash feldspar, and nepheline. It occurs in large uniform deposits in Eastern Ontario and is being worked near Lakefield, Ont., by American Nepheline Limited. The deposit there is five miles long, has an average height of 350 ft. above the surrounding country and is from one-quarter mile to one mile wide.

Nepheline syenite is produced mainly for use in the ceramic industry; it is pulverized for use as an ingredient in glass, pottery, vitrified china, floor and wall tile. When pulverized to micron size it is used as a pigment extender in paints, and as a filler in plastics, rubber, and insecticides. It is also used in scouring compounds, and as an additive in the manufacture of mineral wool. Because its high alumina content—about 23 p.c. by weight—may be easily leached out, nepheline syenite is a potential source of alumina.

Salt is one of the necessities of life and is an essential raw material for the chemical and food-processing industries. Salt is found in every province of Canada and truly may be said to be available in inexhaustible quantity. In Western Canada, for instance, it occurs in great underground beds extending for hundreds of miles from the southern part of Manitoba through Saskatchewan to the northern part of Alberta. It is produced in Ontario and Nova Scotia as well as in the Prairie Provinces. Most of the production is obtained by pumping water down holes drilled to the salt beds and then pumping the saturated brine back to the surface.

In 1953, production amounted to 946,650 tons with a value of $7,356,595. About 53 p.c. of this was used by the chemical industry, principally in the form of brine. The chief primary chemical products made from salt are caustic soda, chlorine, and soda ash, but there is a host of secondary products. The fishing industry, meat packing, textile, leather, refrigeration, metallurgical, soap, and many other industries utilize salt. The only salt produced by direct mining in Canada is at Malagash, N.S., where a relatively impure salt is obtained, which after being crushed is sold throughout eastern Canada for use on highways and railways to remove ice in winter and to control dust in summer. At present, Canadian Rock Salt Company Limited is sinking a shaft near Windsor, Ont., in preparation for the mining of the pure rock salt available in that locality at a depth of 1,100 ft.

Silica is another material indispensable to Canadian industry. It is the principal constituent of many minerals but the chief commercial sources are quartzite, sandstone, sand, and quartz from quarries in Ontario, Quebec, Nova Scotia, Manitoba, and British Columbia. The products differ in the several provinces: chief are flux for metallurgical use, silica flour, moulding sand, and material for the making of ferrosilicon, silicon metal, artificial abrasives, silica brick, and other ceramic products. Quartz crystals of excellent quality are quarried in small quantity at Lyndhurst, Ont.—at present the only producing source on this continent. The quartz is used in the making of submarine-detection equipment.

Silica is also used in the chemical industry. Some recent products, known as silicones, which are derived from silica, coke and chlorine, are acclaimed as being among the most significant chemical developments in recent years. Silicones fill the gap between organic and silicate compounds, and their chemical structure promises an endless array of them. They are available in the form of colourless liquids, oils, greases, varnishes, and resins, and as special rubber products. Silicone-treated materials will "shed water like a duck's back."

In 1953, Canada produced 1,721,218 tons of silica worth $1,799,463. Imports in the same period amounted to 703,221 tons valued at $1,928,438. The imports consisted mostly of silica sand for the glass industry. As yet, a suitable glass sand has not been produced in Canada but intensive efforts are being made to locate a suitable domestic source.

Production of *sodium sulphate* in 1953 amounted to 112,881 tons valued at $1,704,313. Not many years ago the alkali sloughs of Western Canada were looked upon as useless—even as dangerous in a cattle-producing area. Investigations in the 1920's showed them to contain well over 100,000,000 tons of solid hydrous sodium sulphate, one deposit alone containing 25,000,000 tons. To-day, four companies are producing the material which is sold for use in making kraft pulp, heavy chemicals and detergents.

Although Canada has no known deposits of native *sulphur*, such as those in the southern United States, it has vast resources of sulphur-bearing minerals from which continually increasing tonnages of elemental sulphur, sulphuric acid, and sulphur dioxide are being obtained. Sulphur and its compounds are used directly or indirectly by practically every industry; in fact, the trend of sulphuric acid sales provides a barometer of industrial activity. Adequate sources of sulphur are vital to any industrial nation but the necessary processes must be developed to make the sulphur available for industrial use. Such processes have been developed in Canada, and this country is within measurable distance of being self-sufficient in sulphur supplies. Eastern Canada and British Columbia produce very large quantities of pyrite, and other sulphide minerals—the pyrite mainly as an inexpensive by-product. For many years it has been utilized as a raw material for making sulphuric acid, for the sulphur is released when sulphide minerals are roasted or smelted, and can be recovered from the smelter gases. Recovery of both elemental sulphur and sulphuric acid from smelter gas was pioneered by the Consolidated Mining and Smelting Company Limited at Trail, B.C. At present, three metallurgical companies are recovering sulphuric acid from this source. Canadian Industries Limited operates the largest plant of its kind for the production of liquid sulphur dioxide from gas from the new oxygen flash-smelting process of International Nickel Company at Copper Cliff, Ont. The C.I.L. plant came into operation in 1953 and produces 90,000 tons annually of the liquid sulphur dioxide—equivalent to 45,000 tons of sulphur. It is used mostly by pulp mills.

Noranda Mines Limited completed a plant near Welland, Ont., late in 1954 to recover annually 18,000 tons of elemental sulphur and 36,000 tons of sulphur as sulphur dioxide from pyrite. In this process 75,000 tons of iron sinter will also be made.

On the Prairies, exceptionally pure elemental sulphur is being recovered from sour natural gas by Shell Oil Company of Canada at the rate of 11,000 tons, and by Royalite Oil Company at the rate of 10,000 tons, a year. The output is marketed with pulp mills on the West Coast. The Shell Oil plant capacity is being doubled to supply Gunnar Gold Mines' new uranium recovery plant at Beaverlodge, Sask.

In 1953, the equivalent of 358,850 tons of sulphur was produced in Canada from these various sources. This was somewhat less than imports which amounted to 359,105 tons in the same period. However, in the future it is expected that a steadily increasing proportion of sulphur will be produced from domestic sources.

In addition to the foregoing, many other industrial minerals are being produced in Canada and are making their contribution to the industrial prosperity of the nation. These include feldspar, mica, talc, soapstone, arsenic, serpentine, diatomite, and ochre. Many others such as actinolite, graphite, epsomite, flint pebbles, volcanic ash, corundum, and apatite have been produced in the past and can be produced again when the demand arises. Still others such as potash, witherite, celestite, rare-element minerals, and rare earths are known to occur in quantity and may come into production shortly, depending on the outcome of investigations now in progress. The steadily increasing demand for the industrial minerals now being produced and the development of uses for those at present lying dormant, make the prospects for increased production of these exceedingly useful materials very promising.

Petroleum and Natural Gas

Extensive recent discoveries of petroleum and natural gas have created a phenomenal expansion in the oil industry and established a vast potential in the natural-gas field. Expansion in the oil industry, however, was not confined to exploration alone, for much progress was made in 1953-54 toward extending marketing facilities by the planning and construction of new refineries to process the oil and pipelines to transport it. Progress was also made in planning for the transportation of natural gas, particularly from Alberta, and authorization was given for the construction of an all-Canadian pipeline to be built across the prairies to Winnipeg, Man., and to continue eastward north of the Great Lakes to serve Ontario and western Quebec. The building of this line will mean an expenditure of hundreds of millions of dollars on development wells to produce the gas, processing plants to purify it, gathering lines to collect it, trunk lines to transport it and distribution lines to market it in Prairie and Central Canada towns and cities. The direct and indirect benefits to Canada of such a project will be enormous and large quantities of gas from Canadian sources will become available to supplement other fuels in the industrial areas of Ontario and Quebec and to provide fuel for mining and pulp and paper industries throughout northern Ontario.

A plan to build a natural gas pipeline from Peace River, Alta., to Vancouver, B.C., with lines southward to serve the Pacific Northwest area of the United States, is also under consideration.

Exploration and Discovery.—All four western provinces shared in the oil and gas exploration activities in 1953 and new and significant discoveries were made. In Manitoba the most promising discovery was at Roselea, a few miles from the producing Virden field in the southwest part of the Province. This discovery, and those of a somewhat similar nature in other provinces, has much significance for future developments because of its stratigraphic and structural relationships. Mississippian strata occur in the Williston basin and in the mountains and foothills of Alberta but thin out to the north and east owing to erosion after deposition, and it is on the up-dip wedging out-edge of these sediments that the oil has been found. The eastern and northern limit of these sediments has been outlined in a general way by widely spaced wells. It extends across the southwest corner of Manitoba, across southern Saskatchewan and trends northwest to cross Alberta, west of Edmonton into the Peace River area west of the town of Peace River, and through northeast British Columbia to the Liard River where outcrops occur south of Fort Simpson. Thus, the eastern edge in a straight line, between various points where known, would be at least 1,200 miles long but probably greatly exceeds that length because of its sinuous outline. All this becomes, as is now being recognized, good prospective oil territory as the oil is held in the southwestward-dipping Mississippian porous strata at favourable locations near their eastern border by being sealed against overlying and overlapping younger beds.

In Saskatchewan there has been production of heavy oil from the Lloydminster and Coleville fields. Also, a considerable reserve of medium-grade oil has been established in a number of fields but particularly in the general Fosterton area. Marketing of this medium-grade oil has been difficult because it is not so desirable as light oil for refining and because it contains sulphur. Arrangements to solve this problem have not yet been put into effect and therefore when light oil was discovered in the Viking sand in the Smiley field it was hailed as of great importance to the Province. It now appears that the Smiley field will contain about 10,000 acres and, although the daily yield per well is moderate, the fact that the wells are relatively shallow and can be completed in a week has led to fast development because the oil can be marketed through the Interprovincial pipeline. This is the first light oil production from Saskatchewan and is of importance in the search for new fields of a similar type.

The Sturgeon Lake field was discovered in 1952. It lies 50 miles east of Grande Prairie in the Peace River area of Alberta and is a reef field somewhat similar to Leduc and Redwater. Further drilling in 1953 has revealed that this field may have a recoverable oil reserve of from 100 to 200 million barrels. Late in 1953, the Pembina field, 65 miles southwest of Edmonton and west of the Leduc-Bonnie Glen-Wizard Lake trend, was discovered. The oil occurs in a sand known as the Cardium in Upper Cretaceous shale of Colorado age. This sand is well known in the foothills from its occurrence in Turner Valley but previously it had not given commercial oil production although it was known to contain gas in a few places. It thins out eastward where the sand in it is replaced by shale. The sand is thus a wedge with southwest dip and in the thin up-dip edge the oil has accumulated. The productivity of individual wells in the Cardium may not be high since the permeability of the sand is rather low but the extent of the field could considerably exceed that of East Texas in the United States, an area of about 136,000 acres in which the productivity has been very large. Thus, the Pembina field may become the largest in area in North America. Its boundaries, however, are not yet known and although the expectation is that all wells drilled in 1953 are in one pool some of them are widely spaced.

In all, about 15 new fields were officially recognized in Alberta in 1953 but most of these had only a few wells in production at the end of the year.

In British Columbia, the drilling in the Peace River area has been primarily to discover gas reserves to supply the proposed pipeline to Vancouver, B.C., and the Pacific northwest area of the United States. There is, as yet, no oil production in British Columbia as a result of this drilling although encouraging shows have been found in a few wells. The gas reserves in the Peace River area are now estimated at 3,949,000,000,000 cu. feet based on 49 potentially productive wells in Alberta with a reserve of 1,775,000,000,000 cu. feet and 45 potentially productive wells in British

Columbia with a reserve of 2,174,000,000,000 cu. feet. This development, particularly in British Columbia, is very remarkable in that the first well in the Fort St. John field, where the main reserves occur, was completed late in 1951. In the past two years the increase in gas reserves in the Peace River area has been at the rate of 1,500,000,000,000 cu. feet a year, but at present there is no market except locally where the consumption is insignificant.

Demand and Markets for Canadian Crude Oil.*—The total demand for oil products in Canada in 1953 showed an increase of 10 p.c. from 1952, reaching 515,000 bbl. a day. The total production of crude oil was about one-third higher than the previous year and supplied about 43 p.c. of Canada's requirements. There was some restriction on output because of market limitations and the 1953 yield of more than 80,000,000 bbl. does not wholly reflect oil-well capacities in the various producing fields in Western Canada.

The Trans-Mountain and the Lakehead pipelines now provide a possible outlet for 600,000 bbl. of oil a day from Western Canada when the markets are developed to receive this volume. The pipeline capacity, therefore, is considerably in excess of the present demand since the yield in 1953 was 77,065,000 bbl. for Alberta, 3,000,000 bbl. for Saskatchewan, and 619,321 bbl. for Manitoba, a total of 80,684,321 bbl. or an average of over 221,000 bbl. a day. Of this amount about 120,000 bbl. a day were refined on the Prairies, leaving about 100,000 bbl. a day for the West Coast and Central Canada and for refining at Superior, Wis., U.S.A. The market for western Canadian oil on the West Coast has been restricted temporarily by imports from the Near East owing to cheap tanker rates so that for the near future the major part of the outlet will be eastward. The recent completion of Sun Oil Company's Sarnia refinery brings the refining capacity in that area to 109,500 bbl. a day and of the 29,600,000 bbl. processed there in 1953, all but 5,224,000 bbl. were Western Canadian crude. In addition, the B. A. Clarkson refinery near Toronto, Ont., processed 5,777,000 bbl. in 1953, of which 2,702,000 bbl. were from Western Canada, making a total of western Canadian crude oil processed in Ontario in 1953 of 27,527,990 bbl. including 450,000 bbl. refined at Fort William. It is expected that, in 1954, this will be increased to approximately 35,140,000 bbl. or an average of about 96,250 bbl. a day. This, exclusive of normal growth, will come close to the saturation point for the outlet of western Canadian crude in central Canada unless it is decided to enter the Montreal market which now is largely supplied from Venezuela by tanker and by pipeline from Portland, Me. The Montreal refineries processed 56,275,000 bbl. of crude oil in 1953 representing slightly more than one-third of the oil refined in Canada. The abundance of oil in world markets at present makes the Montreal market highly competitive for western Canadian oil and it is doubtful whether oil could be supplied from this source without a considerable cut in price. Thus, the crude oil situation in Canada has changed in a few years from one in which very little oil was available from domestic production to one in which the supply now warrants a continual search for new markets. Presumably, in this respect, much will depend on the construction of new refinery facilities along and adjoining the Lakehead pipeline between Superior, Wis., and Sarnia, Ont. In this area the United States market would seem to offer good prospects but there is a duty of 10·5 cents a barrel on light crude oil entering the United States.

---

* Information on the construction of oil and gas pipelines is given in the Transportation Chapter of this volume.

COAL

In a continuing struggle to maintain markets, the Canadian coal industry lost further ground to oil and natural gas during the review period. Nevertheless, the industry made every effort to secure or improve its position through the increased use of strip mining and of mechanization and by means of research and investigations into more economical mining of better-quality coals. In this effort it was assisted by the Mines Branch, Department of Mines and Technical Surveys, Ottawa, and by other research organizations.

Coal output in 1953 amounted to 15,900,000 tons valued at $102,720,000, a decrease of 10 p.c. in volume and 8 p.c. in value from 1952. The decline was greatest in Alberta, the largest producer, where it amounted to 18 p.c., followed by British Columbia with a 12-p.c. decrease.

Because of the substitution of fuel, diesel oil and natural gas for coal for domestic and building heating, for railway use and for power production, Canadian consumption of coal declined 7·8 p.c. in 1953 to 38,141,000 tons. The decrease was almost evenly divided between domestic and imported coal. An idea of the rapid growth in the changeover from coal to oil in domestic and building heating during the past decade may be gained from the fact that, during the 1941-45 period, the oil consumed, estimated as the heat equivalent in terms of coal, amounted to almost 6 p.c. of the total fuel used. By 1953, this had spiralled to 45 p.c. of the total fuel used.

One of the heaviest losses encountered by the coal industry has been that of the shrinking railway market because of the railway conversion from coal to oil-burning and to diesel locomotives. During 1953, the Canadian National Railways, as part of its five-year conversion program to be completed in 1956, converted 99 coal-burning steam locomotives to oil, mainly in Western Canada, which alone means a loss of approximately 297,000 tons of coal yearly. Moreover, Canadian railways added a further 206 diesel units to their rolling-stock during 1953, bringing the total number of diesels in use at the end of the year to 969. In the production of thermal power, coal vies strongly with oil and natural gas. This type of power is coming into increasing use particularly in the Prairie Provinces where the economical supply of hydro-generated power has about reached its peak. The construction of one and possibly two large thermal plants is planned for the near future in Alberta, both near large reserves of coal.

Coal production by strip mining, a lower-cost method carried out in all provinces except Nova Scotia, increased 7·3 p.c. to 6,195,059 tons in 1953. In Saskatchewan, 99·7 p.c. of the output was strip mined, in Alberta almost 43 p.c., in New Brunswick about 73 p.c., and in British Columbia, 19 p.c. The average output per man-day in strip mining was estimated at 11·4 tons compared with 2·6 tons for underground.

The most outstanding development in mechanization in recent years is the 'Dosco Miner' developed in the mines of Dominion Steel and Coal Corporation Limited in Nova Scotia. The machine, which is rapidly coming into general use in eastern collieries, is capable of cutting coal from the longwall face without the aid of explosives and of loading it onto conveyors at the rate of 500 tons of coal per eight-hour shift.

During the review period, considerable research into the complex phenomena relating to rock pressures in mines, with special reference to the violent occurrence of "bumps" and "outbursts", continued to be carried out in Western Canada and in the Maritimes by the Department of Mines and Technical Surveys.

The industry's efforts to improve the quality of its products have been concentrated on the application of modern methods of beneficiation such as cleaning, drying and the briquetting of fines. During the review period the manufacture of briquettes increased in Western Canada particularly in the Mountain Park, Cascade and Crowsnest areas of Alberta, where briquettes suitable for locomotive use are prepared from coal fines. The production of these briquettes has aided materially in retaining some of the railway market. In 1953 the railways absorbed, for locomotive use, over 81 p.c. of the 708,493 tons of briquettes produced in Canada that year. A new plant for the manufacture of these briquettes was put into operation in the East Kootenay area of British Columbia.

Interest also increased in the possible production of briquettes for use in both domestic and industrial stokers, and an investigation into these possibilities was started at the Mines Branch, Department of Mines and Technical Surveys.

Nova Scotia and New Brunswick.—Nova Scotia produces high and medium volatile bituminous coking coals in the Sydney, Cumberland and Pictou areas and some non-coking bituminous from the Inverness area. Production in 1953 amounted to 5,787,000 tons compared with 5,905,000 tons in 1952, and accounted for 77 p.c. of the total value of the Province's mineral output in 1953. Most of the major operations are completely mechanized. However, as much of the production comes from submarine workings, operators are faced with the problem of increasingly high transportation costs. To overcome this and to increase output, Dominion Steel and Coal Corporation Limited, the largest operator, is building a 6,225-foot inclined tunnel into its workings at Glace Bay. The tunnel will be equipped with a belt-conveyor system to bring the coal to the surface with a single-track road for use in transporting men and material to and from the surface by rope haulage.

The Geological Survey of Canada continued to carry out coal research investigations at its Sydney office with a view to assisting development and prolonging the productive life of the Sydney coalfield. The office is operated in co-operation with the Nova Scotia Department of Mines and the Nova Scotia Research Foundation.

Output in New Brunswick is a high volatile bituminous coal from the Minto area. In 1953, it amounted to 721,000 tons compared with 743,000 tons in 1952.

Most of the coal produced in the Maritimes is used locally for industrial and domestic purposes; the remainder is shipped to Ontario and Quebec.

Saskatchewan.—Saskatchewan produces only lignite coal, chiefly from the Bienfait division of the Souris area, the main producing fields being the Estevan and Roche Percee divisions. Production in 1953 totalled 2,000,000 tons, a decline of 62,000 tons from 1952. Approximately 65 p.c. of the output was shipped to Manitoba for domestic and industrial use.

Alberta.—Alberta produces almost all types of coal including a small tonnage of semi-anthracite. Production in 1953 dropped to 5,917,000 tons from 7,195,000 tons in 1952. About 59 p.c. of the output was bituminous and the remainder mainly subbituminous and lignite. Coking bituminous coal ranging from high to low volatile is produced in the Crowsnest, Nordegg and Mountain Park areas. Another large bituminous mine in the Mountain Park area was closed leaving the area with only one operating property. This mine and the one remaining operating mine in the Nordegg area are almost entirely dependent upon the continued use of coal by the railways. Lower-rank bituminous non-coking coals are produced in the Lethbridge, Coalspur, Saunders and several other areas of the foothills. The coal in the Drumheller, Edmonton, Brooks, Camrose, Castor and Carbon areas is classed as subbituminous and that in the Tofield, Redcliff and several other areas is on the border of subbituminous and lignite. The Cascade area was the only field that produced semi-anthracite in 1953.

British Columbia.—Bituminous coking coal ranging from high to low volatile is mined on Vancouver Island and in the East Kootenay, Telkwa and Nicola areas. Small quantities of subbituminous coal have been produced mainly in the Princeton field. In the Kootenay (Crowsnest) area, the largest producing field, medium-temperature oven (by-product) coke is manufactured for industrial consumption.

Section 2.—Government Aid to the Mineral Industry*

Subsection 1.—Federal Government Aid

The Department of Mines and Technical Surveys.—The Federal Department of Mines and Technical Surveys came into being on Jan. 20, 1950, in the reorganization of the former Department of Mines and Resources. The Department has five branches—Surveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, and Geographical Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act and of the Explosives Act.

Surveys and Mapping Branch.—The Branch provides the base maps required for use in the development of Canada's natural resources, produces and distributes all Canadian aids to navigation, is responsible for legal surveys of federal lands, and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.

The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea-level are determined with a high degree of accuracy. The determination of geographical position by astronomical observations for mapping purposes in northern areas is being superseded by Shoran trilateration in which the adaptation of radar is meeting with success.

The Topographical Survey provides topographical maps that show all significant natural and artificial features fundamental to the study and economic development of mineral and other natural resources. The Topographical Mapping Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Survey Section plots and produces maps from these aerial photographs. The National Air Photographic Library indexes, preserves and distributes prints for all aerial photography done by or for the Federal Government. The Topographical Survey administers the Canadian Board on Geographical Names.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and Indian lands and reserves. This Division prepares and distributes aeronautical charts (for which the preparation of base maps involves planimetry derived from tri-camera aerial photography and altimetry derived from radar measurements), flight manuals and electoral maps.

---

* Revised under the direction of Marc Boyer, Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence-Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

The Map Compilation and Reproduction Division prepares, draughts and reproduces maps, charts and plans for lithographic printing in multi-colour. The work includes the preparation and photo-reproduction of air-chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographical maps, and the reproduction and printing of hydrographic charts.

The Branch had 17 geodetic, 33 topographic and 20 legal survey parties in the field in 1953. Nine ships and six motor launches were engaged in charting operations.

Geological Survey of Canada.—The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally, including water supplies, for soil surveys and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas and accompanied, as a rule, by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series reports, dealing in a comprehensive way with mineral deposits of a particular type. Coloured geological maps are issued on various scales from one inch equalling a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology in pattern are issued shortly after the field season ends for those areas where the search for metals or minerals is active.

In 1953, the Geological Survey had 79 parties in the field, one more than in 1952. The work undertaken included an aerial reconnaissance by conventional aircraft in northern Ungava covering the northern continuation of the Quebec-Labrador iron belt, and the investigation of a folded belt of metamorphic rocks in northern Ellesmere Island, less than 500 miles from the North Pole.

The Regional Geology Division carries out geological surveys of the bedrock formations and associated ores and economic materials of Canada by means of annual programs of systematic investigations and geological mapping, mainly of areas that have been mapped topographically. It conducts airborne magnetometer surveys as an aid to regional geological mapping and prospecting.

The Palæontology Division carries out palæontological and stratigraphical investigations and studies that are of great importance in geological mapping, interpretation of structures, and exploration for natural fuels and minerals.

The Mineralogy Division prepares and distributes mineral and rock collections for use by prospectors and educational institutions, organizes and maintains a systematic collection of minerals for reference and exchange, and identifies mineral specimens sent in by the public.

The Radioactive Resources Division is concerned with the field and laboratory investigation of Canadian resources of radioactive raw materials and maintains free testing and advisory services for uranium prospectors. As agent of the Atomic Energy Control Board, the Division receives the results of analyses for uranium and thorium and reports on the development of radioactive mineral deposits. This information is incorporated in a confidential inventory.

The Pleistocene and Engineering Geology Division makes studies of the unconsolidated materials that mantle the bedrock throughout the greater part of Canada. The geological study of these materials is a prerequisite for many types of engineering and agricultural projects.

The Fuels Resources Division is engaged in the technical study and interpretation of rock cuttings from wells drilled for oil and natural gas with a view to directing exploration for these minerals to localities offering the greatest promise of production. The Division also investigates the geology of coal deposits as a basis for estimating Canada's coal reserves and conducts research into the microscopic character of individual seams.

The Geological Cartography Division prepares cartographical representations for the reproduction of preliminary and standard geological maps, compiles and edits geological and related maps, prepares drawings for maps in the Airborne Magnetic series, and provides drawings, tracings, diagrams, designs, etc., as required.

The technical editing of all reports and map manuscripts published by the Geological Survey is conducted by the Geological Manuscripts Division, which also prepares quarterly and annual reports on the progress of field and office projects, supervises papers prepared for publication and supervises and assists in the preparation of geological map compilations.

Mines Branch.—The Branch is concerned in the main with the technological problems of the mineral industry and maintains well-equipped ore-testing, mineral-dressing, fuel-research, ceramic, radioactivity and industrial minerals laboratories.

The Mineral Dressing and Process Metallurgy Division serves Canada's mineral industry through tests, investigations and research on all types of Canadian ores. The main purposes of these activities are to devise economic and efficient methods of processing ores—a service of special benefit to new mining ventures and particularly to those developing low-grade or complex deposits—and to assist mine operators in solving problems encountered in mill practice. Much of the Division's recent research has been on the extraction of gold from complex ores and on the processing of titanium ores. As a service to industry and to assist the Department of National Defence, extensive investigations have been conducted on the corrosion of metals.

The Radioactivity Division is concerned with investigations of radioactive ores, particularly with the development and application of methods whereby marketable concentrates may be produced from individual uranium ores. The primary purposes of the Division's technical services and laboratory facilities are to help bring new properties into production by determining methods suitable for treatment of particular ores and to encourage the search for uranium deposits. Extensive experimental and development work is conducted on the treatment of ores and products from the properties of Eldorado Mining and Refining Limited, a Crown company.

The work of the Industrial Minerals Division consists of tests, research and investigative work on industrial minerals, including water used for industrial purposes. The Division makes field studies of deposits, examines industrial processes utilizing them and conducts research into methods of beneficiating minerals from deposits of marginal and submarginal quality to bring them to the standards demanded by modern industry.

The Fuels Division studies the type, quality and uses of all fuels. It makes studies of production methods, largely for the purpose of devising cheaper and more efficient methods of mining, preparing, processing and utilizing coals. Work in the field or laboratories includes: the investigation of methods of mining, particularly of rock pressures in relation to the economical mining of coal at depth, and of coal preparation such as the cleaning and utilization of the low-grade finer sizes of bituminous coal which predominate in Canadian mining operations; the development of a coal-fired gas-turbine; investigations into the making of coke for foundry and other metallurgical uses, and into the increased use of Canadian coal in domestic stokers; high-pressure hydrogenation tests on coal for the production of synthetic liquid fuel, and hydrogenation as applied to the refining of oil from the bituminous sands of Alberta; and analyses of crude oils and natural-gas products.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications, and in activities aimed toward improving present practices in metal fabrication. It serves the Department of National Defence by extensive research and investigative work concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. The Division also handles the metallurgical problems of the atomic energy project at Chalk River, Ont.

The Mineral Resources Division provides a mineral information service that is freely used by government departments, mining and allied industries, and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential, special attention being given to those minerals in which Canada is deficient. The Division makes economic studies of different phases of the mining industry. It gives technical advice as required for the administration of the Emergency Gold Mining Assistance Act and prepares reports, on request, to aid in the administration of such matters as: tax exemptions on new mining properties; tax deductions as an encouragement to prospecting for base metals, other minerals and petroleum; and tax allowances for the drilling of deep-test wells for oil in unproven fields.

Dominion Observatories.—The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Agincourt, Ont., Meanook, Alta., and at Resolute Bay and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated at Victoria, Horseshoe Bay and Alberni, B.C.; Ottawa and Kirkland Lake, Ont.; Seven Falls and Shawinigan Falls, Que.; Halifax, N.S.; Saskatoon, Sask.; and Resolute Bay, N.W.T.

The Dominion Observatory, Ottawa, Ont., is responsible for the time service of Canada, which involves nightly astronomical observations of star positions and radio-broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions, and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada, with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed to study important aspects of the earth's crust in Canada and to assist in world-wide investigations of the earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory, Victoria, B.C., is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. Its 73-inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge.

The Geographical Branch.—The function of the Branch is to organize and make available all the geographical data on Canada and on foreign countries that might be of use in promoting the economic, commercial and social welfare of Canada. The work is of two kinds—the compilation of geographical material of national significance, and geographical surveys in the field. The chief project at present is the compilation of an Atlas of Canada in co-operation with various Departments of the Federal Government.

The Dominion Coal Board.*—The Dominion Coal Board was established by the Dominion Coal Board Act (R.S.C. 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act, the Board was constituted a department of Government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of advising upon and administering transportation subventions.

Ancillary to these principal duties, the Board is empowered to undertake research and investigations with respect to:—

(1) the systems and methods of mining coal;
(2) the problems and techniques of marketing and distributing coal;
(3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
(4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
(5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
(6) the co-ordination of the activities of Government Departments relating to coal;
(7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

At the outset, the Board was concerned with the readjustment of the Canadian coal-mining industry to peacetime conditions and the implementation of the recommendations of the Royal Commission on Coal (1946). On the Board's initiative, the system of transportation subventions, designed to equalize the competitive position of Canadian and imported coals in Central Canada markets, was reorganized and extended. As a result of the revised Government assistance, production reached record heights and the movement of Canadian coals to the Ontario and Quebec markets from Eastern and Western Canada increased greatly. Employment also increased as did average production per man-day.

---

* Prepared under the direction of W. E. Uren, O.B.E., Chairman of the Dominion Coal Board.

However, starting in 1952, new economic and technological developments began to have an adverse effect on the situation. It became evident that the Canadian coal industry was being faced with problems that could not have been foreseen by the Royal Commission. The greatly expanded development of oil and natural gas in the western provinces has resulted in growing inroads by these fuels into the markets for locally produced coal. With the extension of pipelines and a plentiful supply of cheap imported residual oils, the impact of competing sources of energy on coal markets throughout Canada has been increasingly felt. Dieselization of the railways and conversion of coal-burning locomotives to oil has drastically cut, and threatens to virtually eliminate in the not too distant future, one of the main traditional outlets for Canadian coal. The situation has been worsened by other factors including increased transportation costs on the movement of Canadian coals and a widening price spread at the pithead in favour of the imported products.

As a result of these conditions, which have been aggravated by a succession of mild winters, the Canadian coal-mining industry reached a critical stage during the year ended Mar. 31, 1954, despite the fact that in that year $9,861,240 was paid in transportation subventions as compared with $5,949,005 in 1952-53. The Board, in its studies and recommendations, has kept pace with developments and the Government, fully cognizant of the situation, is currently seeking as sound a solution as possible to the difficulties confronting the coal industry. The Board's recommendations as to a Canadian coal-production policy have been under study by an *ad hoc* Committee on coal subvention policy, composed of deputy ministers of the Departments concerned, preliminary to Government decision.

As agent of the Minister of Mines and Technical Surveys, the Board continued to handle applications for loans under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 179) and to administer the loans granted thereunder. The Board also continued to administer payments under the Canadian Coal Equality Act (R.S.C. 1952, c. 34) which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. During the year ended Mar. 31, 1954, 752,752 tons were bonused at a cost of $372,612.

The Dominion Coal Board maintains a continuous review of Canada's energy requirements. Because of the growing impact of oil and natural gas on the markets for Canadian coal, study has been intensified on the relation of the competing sources of energy and of possible new outlets for the solid fuel. An Interdepartmental Committee on Energy, composed of representatives from the Board and Departments and agencies of the Government concerned, has recently been established to centralize all information concerning sources of energy and to investigate their relation to the national economy. Furthermore, a power survey of the Maritime Provinces is under way which, it is hoped, will disclose means whereby the price of power may be reduced with a consequent greater demand for coal, and the basic conditions defined under which an increasing development of coal-burning plants may be planned and put into operation.

The Board, since its inception, has worked toward the co-ordination of the activities of various Government Departments and other bodies relating to coal. On the matter of technical research as related to the marketing and distributing of coal, the Board has maintained close liaison with the Division of Fuels of the Department of Mines and Technical Surveys. Under the auspices of the Board, Dominion-provincial conferences on coal research have been held annually since 1949 for the purpose of co-ordination and exchange of ideas.

At the instance of the Board, an Interdepartmental Committee on the Supply to the Armed Forces of Fuel and Equipment for Heating was set up in 1949 to advise on the purchase and supply of fuel to the Armed Services. In addition, close contact has been maintained with the purchasing agents of those Government Departments using coal whom it has advised on questions connected with the buying of coal.

In a wider sphere, the Board has met on occasion with the Coal Policy Committee of the Provincial Ministers of Mines and has given consideration to recommendations made by the latter body relating to coal. It has also kept contact with trade and other associations concerned with the various phases of the Canadian coal industry in order to foster better mutual understanding of governmental and private endeavour. It has generally constituted a central agency through which representations could be made to the Government.

Pursuant to the recommendations of the Royal Commission, the Board has continued to work for a reduction of customs duties and sales tax on coal-mining machinery. It has also maintained its efforts to create a uniform system of coal-mine cost-accounting.

The Dominion Coal Board consists of seven members including the Chairman who is its Chief Executive Officer with the status of a deputy minister. The Board is responsible to, and subject to the direction of, the Minister of Mines and Technical Surveys.

Subsection 2.—Provincial Government Aid*

Nova Scotia.—Under the provisions of the Mines Act (S.N.S. 1950, c. 3), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis, and may guarantee the Nova Scotia Power Commission against any loss incurred on account of capital investments made for that purpose or revenue. Mining machinery and equipment that may be used in searching for, testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, operation of coal mines, loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the Province.

---

* Compiled from material supplied by the provincial governments.

New Brunswick.—There are five divisions under the Mines Branch of the Department of Lands and Mines. The *Mineral Lands Division* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases, and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The *Mine Inspection and Engineering Division* administers the safety regulations governing operations under the Mining Act. Regular inspections of all mines are performed. Laboratory facilities are maintained. It is the responsibility of this Division to approve equipment used in mines. The *Geological Division* carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution. Mineral and rock specimens are examined for prospectors. Preliminary examinations of mineral prospects are performed where requested and circumstances warrant. The *Mine Assessment Division* is responsible for collection of mining tax and royalties and the preparation of statistics concerning mineral production are prepared. The *Bathurst Office Division* serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aeromagnetic maps are available for inspection and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.—The Mining Act (R.S.Q. 1941, c. 196) authorizes the Quebec Department of Mines to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand, if a particular property requires a branch road from an established highway, the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines, the Department regulates the use of land and permits the establishment of well-organized communities. The municipal organization of such communities is jointly administered by the Department of Mines and the Department of Municipal Affairs.

The Department maintains well-equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore-dressing, and analysis by wet or dry assays, spectrography or X-ray. Qualitative and mineralogical determinations are made free, but quantitative analyses are made for a fee according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses.

At Val d'Or in western Quebec, the Department maintains a sampling and treatment plant where tests may be made on bulk samples and where precious metals may be recovered for prospectors at cost price. The treatment plant, which is fully equipped to carry out a wide variety of pilot-scale ore-dressing tests, is at the disposal of mine owners who wish to establish mill-flow sheets. At Thetford Mines, in the heart of the asbestos district, the Department maintains a laboratory where classification of asbestos is made according to standard designations or grades. The Province has authorized the establishment of research laboratories to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

The Department undertakes geological mapping and inspection. The work is divided between two branches, one responsible for reconnaissance (aerial) mapping, the other doing detailed mapping in mining districts and inspection of individual deposits or properties. Field parties are headed by geologists or mining engineers. The published reports on these investigations are distributed free upon request. During the field season, about 30 parties are maintained in different sections of the Province. In mining districts, offices in charge of resident geologists are maintained to collect, preserve and compile geological information disclosed by mining explorations and individual sheets of the compilation are made available to the public.

The Department employs inspectors whose duties are almost exclusively concerned with the safety of workmen in operating mines. Two Mobile Mine Rescue Stations are also operated and a mine rescue training program conducted.

In the field of education for prospectors, five-week courses at university level are organized each year at Laval and Montreal Universities. University scholarships are granted each year to deserving undergraduates and post-graduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry. Lectures are given to prospectors at different localities throughout the Province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the Province, as briefly enumerated below.

Mining Lands Branch.—This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the final issuance of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. As new surveys are made or later data become available, maps are revised in keeping with such information. District Mining Recorders maintain offices at strategic locations throughout the Province.

Geological Branch.—A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas of the Province, resident geologists are engaged to gather, and make available to the public, information concerning geological conditions, exploration and development within their respective districts. One geologist specializing in industrial minerals is maintained on the staff to examine deposits of this order to investigate methods of treatment and recovery of such minerals, and to compile data on the uses, specifications and markets for such products. Collection and dissemination of information on ground water resources is also a function of the Geological Branch. During the winter months, courses of instruction for prospectors are held in various centres throughout the Province.

Laboratories Branch.—The Provincial Assay Office, located in the East Block of the Parliament Buildings, Toronto, carries out wet analyses and assays of metal and rock constituents on a custom fee basis and also renders the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, conducts a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.—The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the Province. Mine rescue stations in the principal mining sections are operated under the supervision of the Inspection Branch.

Exhibitions.—The Department each year presents displays pertaining to mining within the Province at such exhibitions as the Central Canada at Ottawa, the Canadian National at Toronto, and at other centres from time to time.

Publications Branch.—All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.—A mining library for the use of the Department and the public is maintained within the Department. This library is comprised mainly of publications and maps of the Federal and Provincial Governments of Canada as well as of numerous periodicals and bulletins from the United States.

Mining Roads.—The most recent service of the Department is the provision of mining roads. In general, two classes of road-building are envisioned under this program. The first class of road contemplated is a mining access road, financed solely by the Department, for the purpose of opening up favourable areas for exploration; the second class of road, undertaken jointly by the Department and local mining operators, is intended to assist in the provision of required service roads to such operators.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers four main services of assistance to the mining industry: (1) maintenance, by the Mining Recorder's office at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; (2) compilation, by the geological staff of the Branch, of information pertinent to mineral occurrences of interest both in the past and the present and expansion of this information by a continuing program of geological mapping; (3) enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices, such as those concerned with mine ventilation and the training of mine rescue crews, which contribute to the health and welfare of mine workers; and (4) maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Saskatchewan.—The assistance given to the mining industry by the Saskatchewan Government consists of: (1) the maintenance of a geology department, under a principal geologist; (2) resident geologists stationed in or near the principal mining areas; (3) geological survey parties and reports; (4) prospectors' school; (5) prospectors' assistance plan; and (6) native trainees plan.

The Geology Department has its headquarters at Regina. The principal geologist and staff are available at all times to give information and other help to interested parties.

A resident geologist is stationed at Uranium so as to give all possible assistance to prospectors in this area. During the summer months, geological survey parties study and map attractive areas and prepare reports which are made available to anyone interested. The prospectors' school gives basic training in geology, mineralogy and prospecting and exploration techniques to future prospectors. Prospecting has become a skilled and specialized trade and instruction in this field will help young men to get a start in a profession very vital to the mining industry of Canada. The prospectors' assistance plan, which is intended to encourage prospecting, assists bona fide prospectors by way of equipment and transportation and provides technical advice regarding geologically favourable areas.

The native trainees plan has a twofold purpose: (1) to train the Indians and Métis in the northern part of the Province to recognize the common minerals so that, as they go about their usual work, they will be aware of mineral indications that may be of value; (2) to train them to a point where they may be used as prospectors for the exploration companies and, by so doing, extend their means of livelihood beyond the hunting and trapping field.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine-rescue crews. The oil and gas industries are served in a similar way by the Petroleum and Natural Gas Conservation Board. Its regulatory measures, however, are also concerned with the prevention of waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the Province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analysis of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, the up-grading and the cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture.

The Province from time to time has had Commissions examine various aspects of the mining industry when it was considered that their findings would be of assistance in developing such industries. The Province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the Federal Income Tax Act.

British Columbia.—The Department of Mines of British Columbia provides the following services: (1) detailed geological mapping as a supplement to the work of the Geological Survey of Canada; (2) free assaying and analytical work for prospectors registered with the Department; (3) assistance in the field to the prospector by departmental engineers and geologists; (4) grubstakes, limited to a maximum of $500, for prospectors; (5) assistance in the construction of mining roads and trails; and (6) inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.*—The Federal Government administers the mineral lands of the Yukon Territory and the Northwest Territories as well as those within Indian reserves and in National Parks.

Mining Acts and Regulations covering the Yukon and Northwest Territories are administered by the Lands Division, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources. Grants issued for federal lands (the property of the Federal Government) in these regions reserve to the Crown the mines and minerals underlying such lands.

Mining rights on vacant and certain other federal lands may be acquired by entry or lease for a period usually of 21 years, renewable for further periods of like duration, on the terms and conditions specified in the various Acts and Regulations relating to federal lands.

The disposal of minerals occurring in Indian reserves is subject to the consent of the Indians occupying the reserve.

The Acts and Regulations governing mining and quarrying on federal lands are summarized in Report No. 828, entitled *Mining Laws of Canada*, issued in 1950 by the Mines Branch, Department of Mines and Technical Surveys, Ottawa. This publication also lists all the laws and regulations pertaining to mining on federal lands. Copies of these individual Acts and Regulations may be obtained by applying to the Northern Administration and Lands Branch, mentioned above. Another publication of interest in connection with mining regulations and available from the aforementioned Mines Branch is entitled *Summary Review of Dominion Tax and Other Legislation Affecting Mining Enterprises in Canada.*

---

* Revised under the direction of Marc Boyer, Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

Provincial Mining Laws and Regulations.*—All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province, except Ontario and Nova Scotia, no longer carries with it mining rights upon or under such land. In Ontario, mineral rights are expressly reserved if they are not to be included. In Nova Scotia, all minerals belong to the Crown except limestone, gypsum and building materials and, in granting land from the Crown, the right to these minerals goes with the title. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick and Quebec also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum, gas) and quarrying. Under these divisions of the provincial mining industry, regulations are summarized as follows:—

Placer.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia, the most elaborate laws and regulations apply in this division. In all provinces, except Alberta, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some cases but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit, and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years. There is no time limit in British Columbia but $500 assessment work, of which a survey may represent one-fifth, must be performed and recorded before a Crown grant may be obtained. In Quebec, a specified number of man-days of work must be performed and the excess may be carried forward for renewals of licence. Before mining can be commenced, a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In the Province of Newfoundland, the provincial mining tax has been modified since Confederation on Mar. 31, 1949, to conform with the provincial obligations under the Federal-Provincial Tax Agreement. No other form of taxation or royalties now exists.

Fuels.—In provinces where coal occurs, the size of holdings is laid down, together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. Royalties are sometimes provided for. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required. However, in Alberta, Saskatchewan and British Columbia, leases usually follow the exploration reservation whether or not any discovery of oil or gas is made, because exploration costs are applicable in part on the first year's rental. In other provinces, except Manitoba, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area subject to carrying out drilling obligations and paying a rental, fees, or a royalty on production.

---

* Compiled from material supplied by the provincial governments.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands, the quarry belongs to the owner; on Crown lands, mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law, although the rights to exploit peat or marl must be obtained by special licence. In British Columbia quarry rights are not reserved in Crown grants.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—Statistics of Mineral Production*

The importance of mineral production, as compared with other primary industries in Canada, is indicated in Chapter XVII, and its part in the foreign trade of Canada is dealt with in Chapter XXII.

Subsection 1.—Value and Volume of Mineral Production

Historical Statistics.—Definite records of the annual value of mineral production go back to 1886 only, although actual production began with the earliest settlements. The figures given in Table **1** are not strictly comparable throughout the whole period, as minor changes have been adopted in methods of computing both the metallic content of ores sold and the valuations of the products. Earlier methods resulted in a somewhat higher value than those now in use would have shown. However, the changes do not interfere with the general usefulness of the figures in showing the broad trends in the mineral industry.

Except for the 1920-30 period, the value of Canada's mineral production practically doubled each decade since the turn of the century. From $64,000,000 in 1900, it rose to $107,000,000 in 1910 and $228,000,000 in 1920. In 1930, it was $280,000,000, rising to $530,000,000 in 1940, $1,045,000,000 in 1950 and $1,331,211,503 in 1953. Similarly, the revised index of physical volume of output from Canadian mines (*see* p. 514) advanced from 37·6 (average 1935-39 = 100) in 1920 to 63·9 in 1930 and 125·7 in 1940. In the next decade, however, the volume gain was not quite so rapid, the index standing at 145·4 in 1950 and 185·8 in 1953.

---

* Revised in the Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

1.—Value of Mineral Production, 1886-1953

Year	Total Value	Value per Capita	Year	Total Value	Value per Capita	Year	Total Value	Value per Capita
	$	$		$	$		$	$
1886	10,221,255	2·23	1932	191,228,225	18·19	1943	530,053,966	44·94

1925	226,583,333	24·38	1940	529,825,035	46·55	1951	1,245,483,595	88·33
1930	279,873,578	27·42	1941	560,241,290	48·69	1952	1,285,342,353	89·07
1931[1]	230,434,726	22·21	1942	566,768,672	48·63	1953[r]	1,331,211,503	90·06

[1] Beginning with 1931, exchange equalization on gold production is included. [2] Includes value of Newfoundland production from 1949.

Current Production.—Mineral production in Canada during 1953 reached a new high value of $1,331,200,000, a figure $45,900,000 or 3·6 p.c. above the previous year's total. The outstanding gain was in crude petroleum, which was $55,100,000 above the recorded value for 1952. Cement was up nearly $12,000,000 and iron ore about $9,000,000. In contrast, the output value for zinc dropped $34,400,000, gold was lower by $13,400,000 and coal was down nearly $8,300,000.

The value of metals was down 2·6 p.c. from $727,900,000 in 1952 to $708,900,000 in 1953. Prolonged strikes at some of the gold mines curtailed output during the latter half of the year, so that the annual total amounted to 4,061,000 oz. t. valued at $139,800,000 compared with 4,472,000 oz. t. at $153,200,000 in 1952. Copper production was about 2 p.c. lower than in 1952 but higher prices raised the total value slightly to $150,600,000. Zinc output rose 7 p.c. and lead gained 16·8 p.c., but price declines resulted in much lower values for these metals at $95,400,000 and $52,000,000, respectively. Iron-ore shipments at 6,500,000 tons were the highest on record. Re-melt iron, a co-product of titanium ore smelting, was valued at $3,800,000. Nickel at $160,900,000 had the greatest value of any individual metal.

Mineral fuels, valued at $311,200,000, in 1953, increased 18 p.c. over 1952. Crude petroleum output increased to 81,300,000 bbl. valued at $198,100,000, thus leading all other minerals in value of production and exceeding gold which had held first place for nearly 25 years. On the other hand, coal production at 15,800,000 tons recorded a drop of nearly 1,700,000 tons from 1952, as several coal mines ceased operations. Natural gas output was close to 100,000,000,000 cu. feet valued at $11,000,000.

Other non-metallic minerals were valued at $127,500,000 in 1953. Of that amount $87,600,000 was for asbestos, which fell slightly in both quantity and value as compared with 1952. Barite output was nearly double the 1952 production but most of the other non-metals, such as feldspar, fluorspar, mica, talc and salt, showed little change.

A new high was established for structural materials at $183,600,000 as compared with $168,800,000 in 1952. The increase was attributed to advances in the cement and clay products industries.

2.—Quantity and Value of Minerals Produced, 1951-53

Analysis of Current Value and Volume.—To assist in clearer and simpler interpretation of the trends in mineral production in Canada over the past ten years, the percentage of the total value contributed by each principal mineral in each year is given in Table **3**. Values upon which percentages in this table are based are the annual values of mineral production, expressed in Canadian currency, as shown in Tables **1** and **2**.

3.—Percentage of the Total Value Contributed by Principal Minerals, 1944-53

The total volume of mineral output attained a wartime peak in 1941 when the production index* stood at 132. Principally because of the steady recession in the mining of gold and other principal metals during the next five years, the index gradually declined and reached a ten-year low point of 97 in 1946. Since then, sharp gains in the production of petroleum and other non-metals, together with moderate increases in metals output, resulted in a sustained advance to a record high level of 186 in 1953.

---

* The construction of this index, which is a component of the revised index of industrial production, is described in DBS Reference Paper, *Revised Index of Industrial Production, 1935-51.*

4.—Indexes of the Volume of Production of the Principal Mining Industries, 1944-53
(1935-39=100)

Note.—Comparable figures from 1935 are given in the 1954 Year Book, p. 523.

Subsection 2.—Provincial Distribution of Mineral Production

Since 1907 Ontario has been the principal mineral-producing province of Canada. In 1944 that Province accounted for 43 p.c. of Canada's total, but its share declined to 35 p.c. in 1953. Alberta's share of the total showed the greatest increase in the ten-year period, rising from 11 p.c. to 18 p.c., a gain accounted for by the tremendous increase in the crude petroleum output of that Province. The proportions contributed by Quebec and British Columbia remained the same at 19 p.c. and 12 p.c., respectively. Nova Scotia's share decreased from 7 p.c. to 5 p.c., Saskatchewan's from 5 p.c. to 4 p.c., and Manitoba's from 2·8 p.c. to 1·9 p.c. Newfoundland produced about 2·5 p.c. of the total mineral production of Canada in 1953. As compared with 1952, gains in value were registered for all provinces except Quebec, Saskatchewan and British Columbia.

5.—Value of Mineral Production, by Province, 1944-53

Note.—Figures for 1899-1910 are given in the 1933 Year Book, p. 345; for 1911-28 in the 1939 edition, p. 323; and for 1929-43 in the 1946 edition, p. 323.

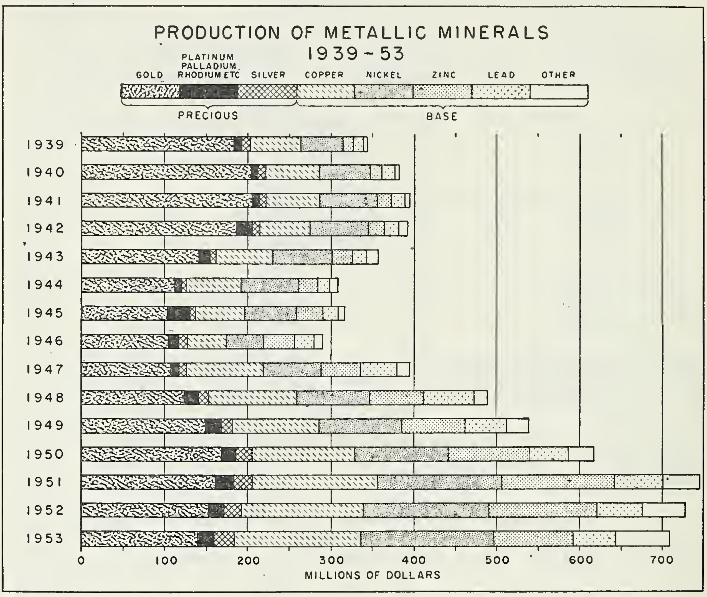
[1] Figures for pitchblende not released for publication.

Subsection 3.—Production of Metallic Minerals

The metals of chief importance in Canada are nickel, copper, gold, zinc, lead, iron, silver and those of the platinum group. These metals are dealt with individually in the following paragraphs. In addition, there are a number of metals produced in minor quantities, principally as by-products in the treatment of metalliferous ores (*see* Tables **2** and **6**).



Nickel.—The total value of nickel produced in 1953 exceeded the value of gold for the first time since 1920. The total 1953 value of $160,900,000 included refined nickel, nickel in oxides and salts, and nickel in matte exported. Export shipments amounted to 79,900 tons of refined nickel and 63,900 tons of nickel in matte.

The two principal producers, International Nickel Company of Canada Limited and Falconbridge Mines Limited operated at capacity during the year. Both have substantial expansions under way to meet long-term contracts for the United States Government as well as for expanding domestic demands. Three new mines in the Sudbury area of Ontario—East Rim Nickel Mines, Milnet Mines and Nickel Offsets Limited—shipped ore or concentrates to the Falconbridge smelter. In Manitoba, the railroad to the Lynn Lake nickel-copper project of Sherritt Gordon Mines Limited was completed in November 1953 and the first shipments of nickel moved early in 1954.

7.—Quantity and Value of Nickel Produced, 1944-53

NOTE.—Figures for 1889-1910 are given in the 1929 Year Book, p. 368; for 1911-28 in the 1939 edition, p. 342; and for 1929-43 in the 1946 edition, p. 333.

Year	Quantity	Value	Year	Quantity	Value
	tons	$		tons	$
1944	137,299	69,204,152	1949	128,690	99,173,289
1945	122,565	61,982,133	1950	123,659	112,104,685
1946	96,062	45,385,155	1951	137,903	151,269,994
1947	118,626	70,650,764	1952	140,559	151,349,438
1948	131,740	86,904,235	1953p	143,966	160,861,368

Copper.—In 1953 copper production recorded a decrease of 2·5 p.c. as compared with 1952, but the value increased by nearly 3 p.c. More than half of the 1953 output of 251,600 tons came from mines in Ontario. In Quebec, labour strikes in the Noranda area, which forced the mines and smelter to remain closed for some months, resulted in a decrease of 22 p.c. in output as compared with 1952. In Manitoba and Saskatchewan output was about the same in both years, while in British Columbia an increase of 15 p.c. was shown in 1953. Newfoundland continued to ship concentrates to smelters in the United States, and the recoverable copper in the concentrates shipped from the base-metal mine in Nova Scotia was more than twice the amount shipped in the previous year.

Development of the Sherritt Gordon nickel-copper mine at Lynn Lake, Man., has continued and shipments of copper concentrates to custom smelters started early in 1954.

8.—Copper Production, by Province, and Total Value, 1944-53

NOTE.—Figures for 1886-1910 are given in the 1916-17 Year Book, p. 272; for 1911-28 in the 1939 edition, p. 335; and for 1929-43 in the 1946 edition, p. 331.

[1] Includes 6 tons valued at $1,428 produced in N.W.T. in 1944 and 1 ton valued at $536 in 1951. [2] Includes 383 tons valued at $218,663 produced in Nova Scotia and 3 tons valued at $1,969 produced in N.W.T. [3] Includes 959 tons valued at $574,441 produced in Nova Scotia.

Gold.—Gold is no longer the leading mineral in total value of production. It was surpassed in 1953 by petroleum, nickel and copper. Production of gold was reduced in that year by the strike action in the Porcupine district of Ontario and in the Noranda area of Quebec. The output of 4,061,000 oz. t. was a decline of 9 p.c. from 1952 and was the lowest figure reported since 1948. The gold mines received a slightly higher price for their product in 1953 but because of the smaller average premium on the Canadian dollar and the choice of selling in the open market the industry was still depressed by high operating costs and narrow profit margins. Production was lower in every province except Nova Scotia and in the Northwest Territories there was an increase of 18 p.c.

9.—Quantity and Value of Gold Produced, by Province, 1944-53

Note.—Values are calculated at world prices in Canadian funds. Figures for 1862-1910 are given in the 1916-17 Year Book, pp. 268-269; for 1911-28 in the 1939 edition, pp. 336-337; and for 1929-43 in the 1946 edition, p. 332.

Zinc.—The production of zinc continued to increase and reached an all-time high in 1953 with an output of 399,000 tons valued at $95,400,000.

Newfoundland's production declined about 10 p.c. as compared with 1952 but Nova Scotia increased its output from 4,400 tons to 7,500 tons. Output of some of the mines in the Noranda area of Quebec was affected by labour disputes but other mines in the Province increased their production, advancing the provincial total to over 100,000 tons. In British Columbia there was an increase of 8 p.c. and in Yukon a rise of 76 p.c. The lowering of the prices of lead and zinc forced about 20 marginal producers in British Columbia to close down during 1953.

Production of refined zinc totalled 248,000 tons and domestic consumption remained steady at 51,000 tons. Zinc exported in ores and concentrates included 169,000 tons to the United States, 9,600 tons to Belgium, 6,900 to France, 4,200 to Great Britain and 3,200 to Norway.

10.—Quantity and Value of Zinc Produced, 1944-53

NOTE.—Figures for 1911-28 are given in the 1939 Year Book, p. 347, and for 1929-43 in the 1946 edition, p. 335.

[1] Estimated foreign smelter recoveries and refined zinc produced in Canada.

Lead.—Estimated lead production in 1953 amounted to 197,000 tons, an increase of 17 p.c. over 1952. The 1953 total included the lead in base bullion produced in Canadian smelters and the computed recoverable content of ores and concentrates exported. British Columbia accounted for 77·8 p.c. of the total, and its output moved up from 129,300 tons in 1952 to 153,000 tons in 1953. The Mackeno Mine came into production in Yukon Territory and its output added to that of the United Keno Mines brought the total for the Territory to 14,000 tons. In Quebec, there were two new contributors, United Montauban and Bowe Mines, but the total production for the Province declined by about 13 p.c. Nova Scotia's only lead producer more than doubled its output of the preceding year. Total refined lead production was about 166,000 tons. Canadian consumers used about 58,000 tons and 102,800 tons of piglead were exported. The lead content of concentrates exported was 61,600 tons, of which 40,600 tons went to the United States, 11,400 to Belgium and 9,600 to West Germany.

11.—Quantity and Value of Lead Produced from Canadian Ores, 1944-53

NOTE.—Figures for 1887-1910 are given in the 1929 Year Book, p. 367; for 1911-28 in the 1939 edition, p. 341; and for 1929-43 in the 1946 edition, p. 333.

Year	Quantity	Value	Year	Quantity	Value

Iron Ore.—From 1944 the total annual production of iron ore has risen from 500,000 tons to 6,500,000 tons in 1953. In 1953, the Wabana mine in Newfoundland produced over 1,000,000 tons more than in 1952, a result of the mechanization program carried out in recent years. Ontario mines shipped about 4·25 p.c. more iron ore in 1953 than in 1952. The Errington Mine at Steep Rock was converted to underground operations and output commenced at the Hogarth open pit. Algoma Ore Properties Limited continued development work and increased the sintering plant facilities. The two mines in British Columbia shipped most of their iron ore to Japan.

The railroad being constructed from Sept Iles, Que., 360 miles northward to Knob Lake was completed early in 1954 and shipments started later in that year. The Quebec Iron and Titanium Corporation at Sorel, Que., produced 98,000 tons of re-melt iron as a co-product from smelting ilmenite ores. A plant is under construction at Welland, Ont., for the treatment of pyrites; one of the products will be an iron sinter suitable for use by the iron and steel industry. The International Nickel Company of Canada is building a plant at Copper Cliff, Ont., to recover iron concentrates from the treatment of low-grade nickel ores.

12.—Iron-Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1944-53

Note.—Figures for 1886-1910 are given in the 1936 Year Book, p. 373; for 1911-28 in the 1939 edition, p. 340; and for 1929-43 in the 1946 edition, p. 333.

[1] Includes production of 1,272 tons in British Columbia.

Silver.—Silver production continued its upward trend in 1953, amounting to 30,100,000 oz.t. as compared with 25,200,000 oz.t. in 1952. The larger contributors were British Columbia with nearly 11,500,000 oz.t. and Yukon Territory with 6,200,000 oz.t. In the extreme eastern and western areas of Canada, silver is recovered from silver-lead-zinc ores; in Ontario it occurs in the nickel-copper, silver-cobalt, and gold ores; in Quebec it comes from copper-gold-silver and silver-lead-zinc ores; and in Manitoba and Saskatchewan the complex ores of copper-gold-silver-zinc yield sizable quantities of silver.

13.—Quantity of Silver Produced, by Province, and Total Value, 1944-53

NOTE.—Figures for 1887-1910 are given in the 1916-17 Year Book, p. 271; for 1911-28 in the 1939 edition, p. 345; and for 1929-43 in the 1946 edition, p. 334.

---

[1] Includes relatively small quantities produced in Alberta.

Metals of the Platinum Group.—Included in this group are platinum, palladium, rhodium, ruthenium and iridium. Nearly all the platinoids produced in Canada come from the nickel-copper ores in the Sudbury area of Ontario. The platinum group residues are recovered from the electrolytic tanks in the nickel refinery at Port Colborne, Ont. The nickel-copper matte shipped by Falconbridge Nickel Company Limited contains some platinum-group metals which are recovered at the refinery in Norway. Production in 1953 amounted to 134,000 oz.t. of platinum valued at $12,200,000 and 161,500 oz.t. of palladium, rhodium, etc., valued at $7,400,000.

The industrial uses of the platinum metals have expanded in recent years, particularly for electrical and chemical equipment, jewellery, and medical and dental appliances.

14.—Quantity and Value of Platinum and Palladium[1] Produced, 1944-53

NOTE.—Records of the platinum production go back to 1887 but, prior to 1921, the amounts were comparatively small and the basis of calculation was not comparable with that now used. Figures for 1921-39 are given in the 1940 Year Book, p. 340, and for 1940-43 in the 1951 edition, p. 513.

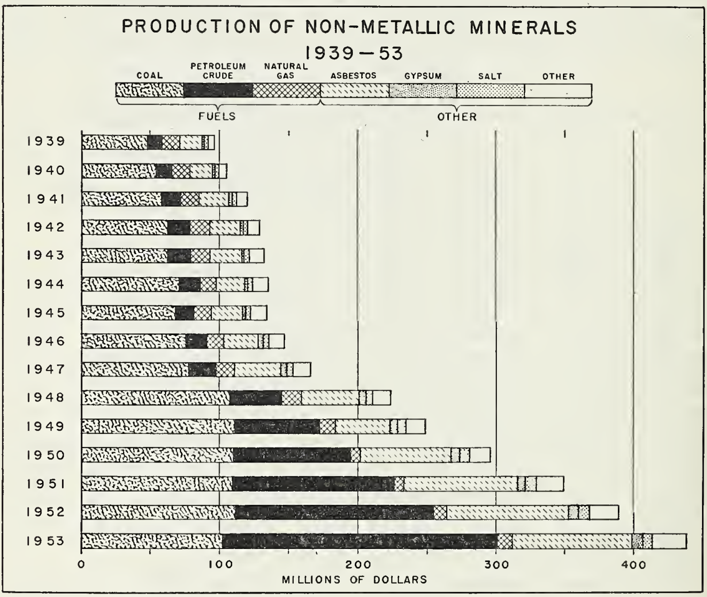
[1] Includes also iridium, rhodium, ruthenium and osmium.

[2] Figures include an accumulated revision for previous years.



Subsection 4.—Production of Non-Metallic Minerals (Excluding Fuels)

The most important minerals in this group are asbestos, gypsum, salt, sulphur; it also includes numerous other items such as magnesitic dolomite, peat moss, quartz, sodium sulphate, fluorspar, barite, nepheline syenite, feldspar, silica brick, mica, soapstone and talc, and graphite (*see* Tables **2** and **6**).

Asbestos.—The producers of asbestos shipped about 912,000 tons valued at $87,600,000 in 1953 as compared with 929,000 tons worth $89,300,000 in 1952. A modernization and expansion program was under way in Quebec and a new mine in British Columbia was progressing favourably at the end of the year.

15.—Quantity and Value of Asbestos Produced, 1944-53

NOTE.—Figures for 1896-1910 are given in the 1911 Year Book, p. 424; for 1911-28 in the 1939 edition, p. 354; and for 1929-43 in the 1946 edition, p. 353.

Year	Quantity	Value	Year	Quantity	Value

1948	716,769	42,231,475	1953p	911,713	87,633,124

Gypsum.—The production of gypsum was higher in 1953 than in 1952 by 175,000 tons, a result of continued demand by the building trades. Nova Scotia mines accounted for 79 p.c. of the Canadian total.

16.—Quantity of Gypsum Produced, by Province, and Total Value, 1944-53

NOTE.—Figures for 1926-43 are given in the 1943-44 Year Book, p. 321.

[1] Includes 8,660 tons valued at $54,881 produced in Newfoundland.

[2] Includes 28,000 tons valued at $152,040 produced in Newfoundland.

Salt.—Salt is obtained from brine wells in the Provinces of Ontario, Manitoba and Alberta, but in Nova Scotia it is recovered by mining rock-salt and by evaporation from brine. Domestic production is sold principally to the dairy, meat-curing and canning industries, to fisheries, to highways and transport departments, to agriculturists for use as a soil sweetener, to chemical industries, and as table salt. About 50 p.c. of the salt production is used in making caustic soda, soda ash and related chemicals.

17.—Quantity of Salt Produced, by Province, and Total Value, 1944-53

NOTE.—Figures for the years 1926-43 are given in the 1946 Year Book, p. 354.

Sulphur.—Sulphur production statistics include the sulphur content of pyrite shipped and the sulphur content of the sulphuric acid and sulphur dioxide made from smelter gases. For statistical purposes the elemental sulphur, recovered during the treatment of natural gas, is not included in the mining industry as it is considered that these treatment plants are more closely allied to the chemical industry.

In 1953 the producers of sulphur shipped 334,000 tons, 90,000 tons fewer than in 1952; in the earlier year there were large shipments of pyrite from stockpiled production of previous years.

18.—Quantity and Value of Sulphur Produced, 1944-53

Note.—Figures for 1926-43 are given in the 1946 Year Book, p. 355.

Year	Quantity	Value	Year	Quantity	Value

Subsection 5.—Production of Fuels*

Coal.—Coal mining continues to be affected adversely by the substitution of fuel oil, natural gas and electricity for heating and power purposes. Output dropped off in 1953 for the third successive year, amounting to 15,900,000 tons compared with 17,500,000 in 1952. There were declines in all producing provinces but the principal loss was in Alberta where output dropped to 5,900,000 tons from 7,200,000 tons in 1952. Output in Nova Scotia was 5,800,000 tons against 5,900,000 in the preceding year and there was a slight decrease in Saskatchewan's production.

---

* Information on the coal reserves of Canada is given in the 1950 Year Book, pp. 516-518.

19.—Coal Production, by Province, 1944-53

Note.—Figures for 1874-1910 are given in the 1911 Year Book, p. 419; for 1911-28 in the 1939 edition, p. 348; and for 1929-43 in the 1946 edition, p. 347.

1948......................	1,273,262	11,555,985	1953......................	255,274	1,999,908

The sources of coal consumed in Canada in the years 1944-53 are shown in Table **22** and detailed figures of coal made available for consumption in 1952 and 1953 are given in Table **23**; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not cleared for consumption until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, as coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required.

22.—Consumption of Canadian and Imported Coal in Canada, 1944-53

NOTE.—Figures for 1886–1910 are given in the 1921 Year Book, p. 354; for 1911–28 in the 1939 edition, p. 350; and for 1929–43 in the 1946 edition, p. 349.

[1] The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported. [2] Includes small tonnages from countries other than the United Kingdom and the United States. Deductions have been made from this column to take account of foreign coal re-exported from Canada and bituminous coal ex-warehoused for ships' stores. [3] Figures based on estimates of population given at p. 137.

[1] Coal reaching Canadian ports whether or not it is cleared through customs, exclusive of 104,553 tons of imported briquettes in 1952, and 104,216 tons in 1953.

Petroleum.—A special article on the Canadian crude petroleum situation up to the end of 1951 is given in the 1952-53 Year Book, pp. 524-527. That information is brought up to the end of 1952 in the 1954 Year Book, pp. 540-544, and to June 1954 in the survey at pp. 492-494 of this volume, and a special article on oil and gas pipelines in Canada is included in the Transportation Chapter.

In 1953, Canadian crude oil production totalled 81,311,531 bbl., an increase of 32·8 p.c. over the 1952 production of 61,237,322 bbl. Western Canada accounted for 99 p.c. of the total and Alberta yielded 77,065,000 bbl. or 95 p.c. There was an increase in Saskatchewan in 1953 with a yield of 3,000,000 bbl., and Manitoba, which had no production previous to 1951, showed a yield of 619,321 bbl.

[1] Includes 10,698 bbl. valued at $26,478 produced in Manitoba. [2] Includes 104,826 bbl. valued at $229,299 produced in Manitoba. [3] Includes 619,321 bbl. valued at $1,526,751 produced in Manitoba.

Natural Gas Production.—Alberta accounts for almost 90 p.c. of Canada's production of natural gas. It is estimated that the total output for all provinces was almost 100,000,000,000 cu. feet in 1953 of which 88,000,000,000 cu. feet was from Alberta's wells. Ontario's production amounted to over 10,000,000,000 cu. feet in 1953. (*See also* the survey of the petroleum and natural gas industry up to June, 1954, pp. 492-494, and the article on the construction of pipelines in Canada, Chapter XIX.)

25.—Quantities of Natural Gas Produced, by Province, 1944-53

NOTE.—Figures for 1920–28 are given in the 1940 Year Book, p. 347, and for 1929–43 in the 1946 edition, p. 350.

Subsection 6.—Production of Structural Materials

Production of structural materials is dependent upon the activity of the construction industry; output in 1953 reached a record value of $183,605,851. This group includes clay and clay products (brick, drain tile, sewer pipe, etc.), cement, lime, sand, gravel and stone.

26.—Value of Structural Materials Produced, by Province, 1944-53

NOTE.—Figures for 1926–43 are given in the 1946 Year Book, p. 355.

Clay Products.—The sales value of clay products produced in 1953 was the highest recorded. Increases were shown in all provinces except New Brunswick and Manitoba. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale. Ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan have not been developed to any extent.

27.—Value (Total Sales) of Clay Products Produced, by Province, 1944-53

Note.—Figures for 1926-43 are given in the 1946 Year Book, p. 356.

Cement.—The production of cement has almost doubled since 1946 and imports have also been relatively high during the same period. The largest production is in Quebec and Ontario although there are active plants in most of the provinces.

28.—Quantity and Value of Production, Imports, Exports and Apparent Consumption of Portland Cement, 1944-53

Note.—Figures for 1910-28 are given in the 1939 Year Book, p. 356, and for 1929-43 in the 1946 edition, p. 356.

Year	Production[1]		Imports		Exports		Apparent Consumption

[1] 'Production' as used here means quantity and value of sales.

[2] The barrel of cement equals 350 lb.

Sand, Gravel and Stone.—Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province, except New Brunswick and Prince Edward Island, produces natural bonded sand but some grades particularly suitable for certain industries demand a much higher price than ordinary sand. Quebec and Ontario contributed 73 p.c. of the total quantity of sand and gravel in 1952. The greater part of the output is used in road improvement, concrete works and railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

The stone industry has two main divisions, stone quarrying and the stone-products industry. The granite, limestone, marble, sandstone and slate quarries of Canada yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in 1952, totalled $30,835,356 as compared with $28,649,768 in 1951.

Section 5.—Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc, and nickel-copper industries, as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, wages and salaries paid and net value of sales.

The figures for 'net value of shipments' of industries given in Tables **30** and **31** are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table **2** of this Chapter where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process. Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which comes mainly from African ores. The net sales of these plants include, therefore, the net value of the metals recovered from these imported ores and, to this extent, the net sales shown in Tables **30** and **31** include products of other than Canadian origin.

30.—Summary Statistics of the Mineral Industry, by Province, 1952

Province or Territory	Plants or Mines	Employees	Salaries and Wages	Purchased Fuel, Electricity and Process Supplies[1]	Net Value of Shipments[2]

---

[1] Includes freight and smelter charges and cost of ores treated.

[2] Gross value of shipments less cost of process supplies, fuel, electricity, freight and smelter charges.

[3] Includes natural abrasives.

Section 6.—World Production of Certain Metallic Minerals and Fuels

Table **32** shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1952. These figures are taken from the United Nations *Statistical Yearbook 1953,* which presents production figures for 1933-52 for a much more extensive list of mining and quarrying industries. The 1952 figures are provisional and have been converted from kilograms to ounces troy for gold and from metric tons to short tons for the other metals and fuels shown.

32.—World Production of Certain Metallic Minerals and Fuels, 1952p

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the United Nations *Statistical Yearbook,* either because there was no production or because the quantity was not available.

NOTE.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

Section 1.—Water-Power Resources and Their Development*

Canada, a land of many lakes and rivers, has been abundantly endowed by nature with great water-power resources which are well distributed across the country. In most sections, adequate precipitation and favourable topography result in numerous rivers on which falls and rapids frequently occur and offer excellent opportunities for the development of hydraulic power; with the exception of the prairies of the middle west, water-power resources of importance are found in virtually every part of the country. In British Columbia, where precipitation is high, the rivers flowing down the Pacific slope of the Rocky Mountains offer many fine power sites. Alberta, although a prairie province, also has mountain streams from the Rockies as well as great reserves of undeveloped power on its large northern rivers. The great Canadian Shield of Precambrian rock, which forms an arc around Hudson Bay, covers a portion of the Northwest Territories and northern Saskatchewan as well as a large part of Manitoba, Ontario, Quebec and Labrador; it is a rough, forest-covered, well-watered area characterized by innumerable lakes and by rivers with many falls and rapids. The water power of the Great Lakes-St. Lawrence River System forms part of the great resources of Ontario and Quebec upon which their status as the principal manufacturing provinces of Canada is dependent and which compensates in large degree for the lack of indigenous coal. In New Brunswick, Nova Scotia and on the Island of Newfoundland, precipitation is moderately heavy and the rivers, though not large, afford numerous possibilities for power developments of moderate size. In Labrador, the potential resources of the Hamilton River are outstanding.

An accurate comparison of Canada's water-power resources and their development with those of other countries† is not possible owing to incomplete world statistics and differing bases of tabulation. However, from figures available at the end of 1952, it appears that Canada ranks second among the countries of the world in total installed capacity, being exceeded only by the United States; in installation per thousand population, Canada is exceeded only by Norway. Canada is in approximately fifth place in potential power resources but, on the whole, those resources are more readily available to prospective markets than are those of other countries that outrank Canada, an exception being the United States. In particular, might be mentioned the enormous potential resources of the great river systems of Africa and Asia.

---

* Revised in the Water Resources Division, Department of Northern Affairs and National Resources, Ottawa.

† More detailed information on the water-power resources of other countries is given in the 1951 Year Book, pp. 531-533.

Subsection 1.—Available and Developed Water Power in Canada

Table 1 gives a summary of the water-power resources of Canada and their development as at Dec. 31, 1953.

1.—Available and Developed Water Power, by Province, as at Dec. 31, 1953

Province or Territory	Available 24-Hour Power at 80 p.c. Efficiency		Turbine Installation[1]
	At Ordinary Minimum Flow	At Ordinary Six-Months Flow	
	h.p.	h.p.	h.p.
Newfoundland	958,500	2,754,000	311,150
Prince Edward Island	500	3,000	1,900
Nova Scotia	25,500	156,000	162,433
New Brunswick	123,000	334,000	164,130
Quebec	10,896,000	20,445,000	7,719,122
Ontario	5,407,000	7,261,000	4,006,686
Manitoba	3,333,000	5,562,000	716,900
Saskatchewan	550,000	1,120,000	109,835
Alberta	508,000	1,258,000	207,960
British Columbia	382,500	814,000	1,496,518
Yukon and Northwest Territories	7,023,000	10,998,000	32,440
Canada	**29,207,000**	**50,705,000**	**14,929,074**

[1] Includes water wheels and hydraulic turbines installed.

The figures given in the first and second columns of the above table represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop, or the head of possible concentration, has been measured or at least carefully estimated. Tabulations of potential power in Canada are still not complete as many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams throughout the country, particularly in the less-explored northern districts. Apart from areas where definite studies have been carried out and the results recorded, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient, where economic heads possibly may be created by the construction of dams. Thus, the figures in Table 1 of available power, under the two conditions of stream flow, represent only the *minimum* water-power possibilities of Canada.

The third column of the table gives the total capacity of the water wheels actually installed. These figures should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water-power resources that has been developed. At developed sites, the water-wheel installation averages 30 p.c. greater than the corresponding calculated maximum available power at the same sites. Figures of Table 1, therefore, indicate that the *at present recorded* water-power resources will permit of a turbine installation of nearly 66,000,000 h.p. and that the turbine installation at Dec. 31, 1953, represents less than 23 p.c. of recorded water-power resources.

1954

The development from year to year of Canada's water-power resources is a good index of the country's industrial growth and of the change in its economic life since the beginning of the present century. In 1900, prior to the inception of long-distance transmission of electricity, Canada's economy was based largely on agriculture and the total of hydraulic installations, mostly small mills, was only 173,000 h.p. After the successful solution of the problems of transmission of electric energy for use in distant communities, the development of large hydraulic projects became practicable and, by 1910, total installation had risen to 977,000 h.p. In ensuing decades, the growth in installed capacity, partly speeded by war demands, proceeded at an accelerated rate.

The figures in Table 2, and the graph on p. 544, show clearly the consistent growth in the total capacity of hydraulic installations since the beginning of the century. In the period 1900-05, the average annual increase was about 56,000 h.p., a rate that was stepped up sharply in subsequent years because of improvements in the transmission of electricity and the building of large central electric stations. During the period 1906-22, development proceeded at a fairly uniform rate of 150,000 h.p. per annum. The heavier demand for electricity during the prosperous 1920's increased the rate of installation sharply in 1923 and it continued at about 377,000 h.p. per annum for the period 1923-35. As an aftermath to the economic depression, the rate of installation was low during the years 1936-39, whereas the power required for war purposes accounted for the high average rate of increase of 481,000 h.p. per annum during the period 1940-43. Few developments were undertaken in the later war years or in the immediate post-war period, so that only a small amount of new capacity came into operation in the 1944-47 period. However, the results of the later post-war program of construction are apparent in the large growth in the years 1948-53 when the average rate was about 740,000 h.p. per annum. Present programs of expansion indicate a continuation of this rate of growth for some years.

2.—Hydraulic Turbine Horse-Power Installed, by Province, as at Dec. 31, Decennially 1900-50 and Annually 1951-53

Note.—Figures for each year 1900-30 are given in the 1939 Year Book, p. 362, for 1931-39 in the 1946 edition, p. 362, and for 1940-49 in the 1954 edition, pp. 556-557.

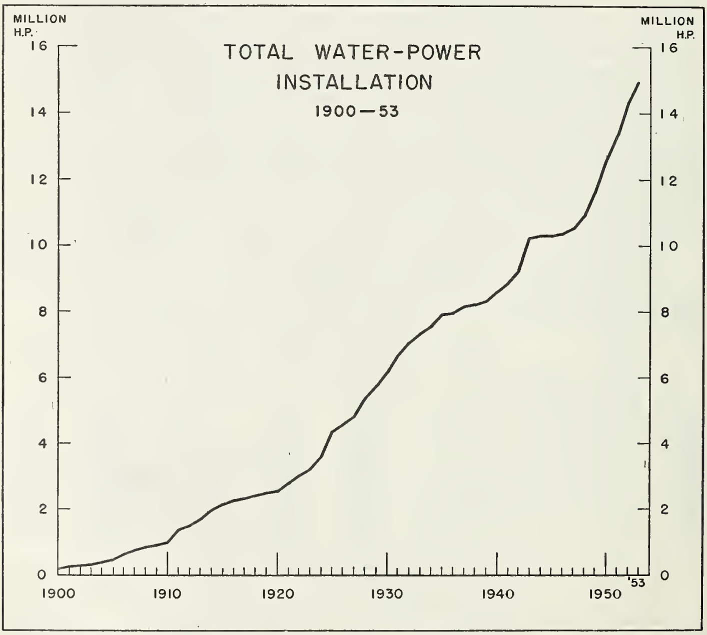
The availability of large amounts of hydro-electric energy has so fostered the economical utilization of the natural products from land, forest and mine that Canada is rapidly becoming highly industrialized. Low-cost power is fundamental in meeting the enormous requirements of the pulp-and-paper industry—Canada's largest industry and one of the world's great industrial enterprises; it also allows the economical mining, milling and refining of base and precious metals and facilitates their fabrication into a multitude of manufactured articles. Canada's outstanding growth in the post-war period has been made in conjunction with accelerated development of water-power resources. From hydro-electric plants ranging in capacity from a few hundred to more than 1,000,000 h.p., networks of transmission line carry power to most urban centres and to an increasing number of rural districts. This wide distribution of power has facilitated the decentralization of industry, enabling manufacturing processes to be carried on in many of the smaller centres of population. Economical domestic electrical service, too, contributes in no small measure to the high standard of living in Canada.



With a total capacity of 14,929,074 h.p., present water-power plants in Canada, if operated at full load, would produce energy at a rate corresponding to the output of more than 149,000,000 manual workers, on the commonly accepted basis of one mechanical horse-power equalling the working capacity of ten men.

Table 3 shows, under three classifications, the purposes for which the developed water power is primarily utilized.

3.—Developed Water Power, by Province and Industry, as at Dec. 31, 1953

Province or Territory	Turbine Installation			Total[4]

Percentages of total installation	90·0	6·2	3·8	100·0

[1] Includes only hydro-electric stations that develop power for sale. [2] Includes only water power *actually developed* by pulp and paper companies. [3] Includes only water power *actually developed* by industries other than central electric stations and the pulp and paper industries. [4] Includes water wheels and hydraulic turbines installed.

The central electric station classification totalling 13,435,788 h.p. represents 90 p.c. of the total developed water power as at Dec. 31, 1953. In 1900 the corresponding percentage was 33·5, thus showing the tremendous growth in central electric station installations since the inception of successful long-distance transmission of electricity. Central hydro-electric stations produced 94 p.c. of all electricity sold in or exported from Canada during 1953.

The pulp and paper turbine installation total of 928,510 h.p. includes only water power *actually developed* and directly used by pulp and paper companies. In addition, this industry is the greatest purchaser of central electric station power, buying more than 15 p.c. of all power sold for industrial purposes. Part of the purchased power is classed as secondary, being used for steam generation by electric boilers.

The 'other industries' group develops 564,776 h.p. solely for its own use. These diversified industries also provide a broad market for the power sold by the central electric stations.

The figure of total hydraulic installation in Canada, 14,929,074 h.p. is the cumulative total of all existing installations of water wheels and hydraulic turbines irrespective of whether or not the equipment has been in use during the year. It has been adjusted to Dec. 31, 1953, by the inclusion of new installations completed during the year and by deletion of those old units which were dismantled.

Subsection 2.—Water-Power Developments in the Provinces and Territories, 1953

Although a tremendous amount of hydro-electric construction was carried out in Canada during 1953, the net increase in installed capacity of 623,194 h.p. was somewhat lower than that of recent years. However, plants and extensions under construction for operation in 1954 totalled 1,500,000 h.p. and those for later years about an equal amount. Projects undertaken or under investigation at rather remote locations emphasize the future economic value of other undeveloped sites in unsettled regions. Construction in the field of power distribution and in the building of thermal-electric plants also was active. Over-all progress in each of the provinces, principally covering hydro-electric development, is outlined below.

Atlantic Provinces.*—The Newfoundland Light and Power Company completed the construction of its second plant on the Horse Chops River, having a capacity of 10,000 h.p. in one unit; also investigations were carried out on Pipers Hole River on which there are three sites totalling about 31,000 h.p. The Anglo-Newfoundland Development Company has completed the modernization of its Bishop's Falls development on the Exploits River, resulting in an increase in capacity of 6,000 h.p., making a total of 21,900 h.p. The Union Electric Light and Power Company investigated a site on the Trinity River where it is proposed to develop 2,000 h.p. under 260-foot head. The Iron Ore Company made favourable progress on its development at Menihek Rapids on the Ashuanipi River, a tributary of the Hamilton River in Labrador, and it is expected that the plant of 12,000 h.p. in two units will be in operation in August 1954; ultimately two additional units may be installed.

No new developments were completed in Nova Scotia in 1953 but the Nova Scotia Light and Power Company Limited had under construction for 1954 operation a plant of 9,000 h.p. on the Nictaux River near Middleton. The Nova Scotia Power Commission is proposing to develop 6,000 h.p. under 22-foot head on the Mersey River near Liverpool for 1955 operation.

The New Brunswick Electric Power Commission brought into operation in April its two-unit 27,000-h.p. plant at The Narrows on the Tobique River. Active investigations were carried out on the Beechwood site on the St. John River with a view to building a plant initially of two units, each of 48,000 h.p. Surveys also were made of a site of about 10,000 h.p. on the Sisson River, a tributary of the Tobique River. The St. George Pulp and Paper Company Limited carried out a modernization program resulting in an increase in capacity of 2,812 h.p. in its plant on the Magaguadavic River. The plant is now rated at 7,812 h.p. in four units.

Quebec.—The Quebec Hydro-Electric Commission completed its Beauharnois Power-house No. 2 by a two-unit addition of 111,000 h.p., bringing over-all capacity of the development to 1,400,000 h.p. On the upper Ottawa River, the construction of the Commission's two-unit 32,000-h.p. Rapid II development proceeded on schedule with operation expected in June 1954. Construction was commenced on a 1,200,000-h.p. hydro-electric development on the Bersimis River about 62 miles above its mouth, with 300,000 h.p. to be developed initially for 1956 operation. Part of the output of this plant will be transmitted to the Gaspe Peninsula by a 32-mile submarine cable to be laid in 1954 on the bed of the St. Lawrence River.

---

* In addition to water-power development, the construction of fuel-electric plants included: a diesel unit of 3,850 h.p. at St. John's by the Newfoundland Light and Power Company; an additional unit of 22,000 kw. in the Halifax steam plant of the Nova Scotia Light and Power Company; and a unit of 18,780 kw. in the Grand Lake steam plant of the New Brunswick Electric Power Commission.

The Aluminum Company of Canada Limited completed its 285,000-h.p. Chute-à-la-Savanne development on the Peribonca River by bringing into operation the remaining four units each of 57,000 h.p. The Price Brothers and Company Limited brought into operation two new plants on the Shipshaw River—70,000 h.p. in two units at Chute-des-Georges and 9,000 h.p. in one unit below Lac Brochet. The Manicouagan Power Company completed the installation of the second unit of 56,200 h.p. in its plant near the mouth of the Manicouagan River, which is designed for six units to be added as required. The Ste. Marguerite Power Company proceeded with the construction of a two-unit 17,000-h.p. plant on that River for 1954 operation. The city of Mégantic had work in progress on the development of 4,500 h.p. on the Chaudière River, with operation of one 2,250-h.p. unit expected in May 1954. The Quebec Rural Electrification Bureau's two-unit development of 1,200 h.p. on the Petites Bergeronnes River at Lac des Sables was scheduled for completion early in 1954.

The Shawinigan Water and Power Company undertook the installation, for 1955 operation, of one additional unit in each of its Rapide Blanc, La Trenche, and La Tuque plants, having a combined total of 158,500 h.p. The diversion works to provide flow from the Megiscane and Susie Rivers into Gouin Reservoir were completed in August 1953. The MacLaren-Quebec Power Company completed the building of a new storage dam on the Lièvre River at the outlet of Kiamika Lake, and one was under construction on the Métis River by the Lower St. Lawrence Power Company. The Quebec Streams Commission carried out stream-flow regulation on a number of important rivers on which storage dams are operated. Reconstruction of dams on the St. Francis, Métis and Manouane Rivers was completed and repairs were made to the La Loutre power plant. Preliminary investigations of water-power sites on the Rupert, Chamouchouane and Bazin Rivers were carried out, also flood-control studies on the Ste. Anne de la Pérade and Salmon Rivers. Flood-protection works were built at a number of locations throughout the Province.

Ontario.—The Hydro-Electric Power Commission of Ontario completed its Otto Holden Generating Station on the Ottawa River above Mattawa by installing the eighth unit of 33,000 h.p., bringing total capacity to 264,000 h.p. Good construction progress was made on the Commission's 12-unit 1,370,000-kw. Sir Adam Beck Generating Station No. 2 on the Niagara River at Queenston, and initial operation was scheduled for 1954. Excavation of the two large tunnels and of the canal and forebay was practically completed; concrete placing in the head works, tunnels and power-house was well advanced; and four penstocks and part of the power-house superstructure were erected. Plans for the development include a 15,000-acre-foot pumped-storage reservoir adjacent to the forebay. At the Commission's Pine Portage Generating Station on the Nipigon River, two additional units each of 45,000 h.p. were being installed for operation in the autumn of 1954. Preliminary construction was begun on a development at Manitou Falls on the English River, which will have a total dependable peak capacity of 42,100 h.p. in three units for 1956 operation.*

---

* In addition, the two large steam-electric plants at Toronto and Windsor were completed, the Toronto station having a present capacity of 388,000 kw. in four units and the Windsor station 264,000 kw. in four units.

The Great Lakes Power Company completed the construction of its two-unit 20,000-h.p. development at Scott Falls on the Michipicoten River. Good progress was made on the Company's McPhail Falls project, a few miles upstream on the same river, and operation of the two-unit 15,000-h.p. plant was planned for late 1954.

Prairie Provinces.*—No new hydro-electric units were brought into operation in Manitoba in 1953, but the Manitoba Hydro-Electric Board continued construction on its McArthur Falls development of 80,000 h.p. on the Winnipeg River. Four units each of 10,000 h.p. are scheduled for operation by December 1954 and plant completion in 1955. In connection with the Laurie River development of Sherritt-Gordon Mines Limited, a control and diversion dam was completed on the Loon River; surveys for a new development were made at a site about seven miles above the present plant.

In Alberta, Calgary Power Limited had under installation a third unit rated at 33,000 h.p. in its Ghost plant on the Bow River, which will bring plant capacity to 69,000 h.p. by June 1954. Construction was proceeding on the Bearpaw development, on the Bow River near Calgary, consisting of one unit of 22,000 h.p. for operation in late 1954 or early 1955. In connection with the Spray River development, two pump stations were being installed to raise water from Goat Creek into the Spray canal, thus substantially increasing the power output of the Spray and Rundle plants.

British Columbia.†—The British Columbia Power Commission completed the installation of the final two units, each of 28,000 h.p., in the John Hart development on Campbell River, Vancouver Island, bringing total capacity to 168,000 h.p. To provide additional storage for this development, surveys and drilling were carried out at Buttle Lake for a dam to be built in 1954. The redevelopment of the dismantled Puntledge River plant was undertaken and a single unit of 35,000 h.p. driving a 30,000-kva. generator was being installed, with initial operation probably late in 1954. Contracts were awarded and work commenced on a development on the Spillimacheen River to consist of three units with a total capacity of 5,500 h.p. for 1955 operation. The Whatshan plant of 33,000 h.p. was badly damaged by two landslides during August and was not restored to full operation by the end of 1953.

The British Columbia Electric Company Limited continued construction towards the installation of a fourth unit of 62,000 h.p. in its Bridge River plant for 1954 operation. The raising of the La Joie storage dam to provide increased reservoir capacity was also continued. Surveys were made covering a proposed development on Seton Creek to further utilize the water diverted through the Bridge River plant; active construction will begin in 1954 and it is planned to have the single unit of 58,000 h.p. driving a 42,000-kva. generator in operation in 1956. A 4,860-h.p. turbine, which served a few years ago in a temporary capacity at Bridge River, was re-installed in the Jordan River No. 1 plant, bringing the capacity to 38,985 h.p.

---

* The City of Winnipeg had under installation a 25,000-kw. steam-electric unit for 1954 operation. The Saskatchewan Power Corporation completed a 20,000-kw. single-unit addition to its steam plant at Estevan, and started, for 1954 operation, the installation of a 25,000-kw. unit in the Saskatoon plant. A 4,300-kw. gas-engine generator set was installed at Unity. Additions to thermal capacity in Alberta include a steam-turbo generator of 30,000 kw. by the City of Medicine Hat in collaboration with Calgary Power Limited; City of Edmonton, a gas-fired steam-turbo generator, 30,000 kw.; City of Lethbridge, 5,000-kw. steam unit; and Canadian Utilities Limited at Grande Prairie, diesel unit of 1,200 kw.

† The Northern British Columbia Power Company Limited installed a diesel unit of 2,750 h.p. as auxiliary to its hydro-electric installations. The Powell River Company Limited added a 13,125-kw. steam turbo-generator to supply additional power to its mill at Stillwater.

Favourable progress was made by the Aluminum Company of Canada on its great Kemano-Kitimat project involving the diversion of the headwaters of the Fraser River through the Coast Range. The drilling of the 10-mile 25-foot-diameter diversion tunnel from Tahtsa Lake and of the penstock tunnel was essentially completed at the end of 1953. The underground power-house was completed and the work of installing three 140,000-h.p. turbines and 106,000-kva. generators was well advanced for operation in May 1954. The 50-mile transmission line from Kemano to Kitimat was virtually completed. The spillway for the Kenney Dam on the Nechako River was ready for operation. Ultimate capacity may be more than 2,000,000 h.p.

The Consolidated Mining and Smelting Company of Canada Limited expects to complete the construction of its Waneta development on the Pend d'Oreille River early in 1954. The plant will contain two turbines each of 105,000 h.p. and ultimately two additional units may be installed. Alaska Pine and Cellulose Limited completed the installation of a 3,200-h.p. turbine, driving a 2,500-kva. generator in its plant at the outlet of Victoria Lake, Vancouver Island. Plant capacity is 4,400 h.p., the power being used principally for pumping purposes.

Yukon Territory.—The Yukon Hydro Company Limited, serving the town of Whitehorse, added a Pelton wheel of 940 h.p. driving an 875-kva. generator to its Porter Creek plant, to bring capacity to 1,390 h.p.

Surveys and investigations towards a major hydro-electric development, involving the storage of Yukon River headwaters and their diversion through the Coast Range, were carried out during the summer of 1953 and will be continued in 1954 by Ventures Limited and its subsidiary companies, Frobisher Limited and Quebec Metallurgical Industries Limited. Preliminary planning indicates that, initially, a development of about 25,000 h.p. may be made on one of the rivers on the Pacific slope in northern British Columbia.

THE ST. LAWRENCE POWER PROJECT*

Joint international development of power in the International Rapids Section of the St. Lawrence River was officially begun on Aug. 10, 1954. Ceremonies held in the presence of government leaders from Canada and the United States marked the inauguration on that day of a 1,640,000-kw. project that has been the subject of international interest for more than forty years. The power thus to be provided is essential to the continued progress of Ontario, and in view of Ontario's important role in the national economy, to Canada as a whole.

The project will be a joint undertaking on the part of The Hydro-Electric Power Commission of Ontario and the Power Authority of the State of New York. The former was authorized by legislation of the Governments of Canada and of Ontario to construct the Canadian part of the work, and the latter was named by President Eisenhower as the entity to undertake the work on the United States side of the river. Each of the power authorities will assume the cost of the generating equipment installed in its own half of the power-house. They will share equally in all other costs of construction and in the total output of the generating station.

---

* Contributed by The Hydro-Electric Power Commission of Ontario, Toronto, Ont.

Ontario Hydro's interest in the St. Lawrence power development dates from as early as 1913 when the first investigations into the possibilities of the International Rapids Section were undertaken. Although interrupted by World War I, these investigations were completed in 1921 and the findings were submitted to the International Joint Commission which had been set up by the Boundary Waters Treaty of 1909 to deal with problems related to the use of international waters. This first formal statement was favourably received by the International Joint Commission, and a Joint Board of Engineers was set up to study how the power could best be developed. Following upon a report by the Joint Board, representatives of Canada and the United States, in 1932, signed The St. Lawrence Deep Waterway Treaty which called for the construction, as an international undertaking, of a combined seaway and power project in the International Rapids section of the river.

The Treaty was, however, not ratified, and because of the association of the navigation and the power aspects of the project, proved to be only the beginning of a series of discussions, proposals, and counter-proposals extending over a period of more than twenty years.

Between 1932 and 1945, because of the delays attending the St. Lawrence development, the Commission met increasing demands for power partly by the purchase or construction of small generating stations, but for the most part by increased amounts of purchased power. Since 1945 power requirements have doubled and have exceeded available supplies of purchasable power. To meet demand the Commission found it necessary to embark on an extensive construction program and fifteen new sources of power have been developed. Those either partially or wholly in service at the end of 1953 have contributed to increasing the dependable peak capacity of the Commission's systems by 84 p.c. from 1,937,500 kw. in 1945 to 3,565,350 kw. Furthermore, agreements for the interchange of power were negotiated with the Detroit Edison Company in 1953 and in 1954 with the Niagara Mohawk Power Corporation of Syracuse, New York. These interconnections add to the security of the Commission's systems by making assistance available at times of emergency.

The construction program undertaken in 1945 has not only been extended from year to year with the increasing demands for power, but has also been adapted from time to time as authorization to proceed with the St. Lawrence power project continued to be delayed. For example, the Commission entered for the first time upon fuel-electric generation on a large scale in the construction of two large stations, one in Toronto and one in Windsor, with a combined installed capacity of 664,000 kw. at 60 cycles. The Sir Adam Beck-Niagara Generating Station No. 2, currently under construction and partially in service, was originally planned with an installed capacity of 450,000 kw. in six units, but was increased in ultimate installed capacity to 1,370,000 kw. by the inclusion of ten additional units and a pumped-storage scheme. (*See further* p. 547.) Other units at this station as they are placed in service and units in other stations under construction will assist in meeting power requirements up until 1957.

With the authorization to proceed with the development of the International Rapids Section of the St. Lawrence River, this project becomes the sixteenth new source of power in the Commission's construction program. It is the last major source of hydro-electric power available to the Commission within economic transmission distance of large load centres.

The frustrating delays which dogged the project for more than twenty years were, in part at least, attributable to the unavoidable association of the navigation and power aspects of the scheme, to which reference already has been made. Economically and physically the two aspects were very closely related, and uncertainty or postponement regarding the one necessarily involved the other. The power development must be a joint undertaking by Canada and the United States; the seaway, though interdependent with the power project, could be constructed by either country or by both countries entirely within their own national boundaries, or it could be constructed as a single international undertaking.

In 1951, Canadian spokesmen, aware of the urgent need for the development of power from the St. Lawrence River, and faced with seemingly insurmountable obstacles in the United States to the combined seaway and power project, began urging the construction of an all-Canadian seaway in association with the international power development. On Dec. 3, 1951, the Canadian Government signed an agreement with the Government of Ontario delegating to the Province the authority for the development of Canada's share of the power in the International Rapids Section of the St. Lawrence River. This agreement, which clarified and firmly established the Canadian policy regarding power, was later ratified by both Governments, and the Provincial Government in turn enacted legislation in October 1952 assigning to the Hydro-Electric Power Commission of Ontario the responsibility for constructing, operating, and maintaining the Canadian half of the power development.

Power aspects of the development were further clarified at the international level in October 1952 when the International Joint Commission approved an application by Canada and the United States to develop power from the International Rapids Section. More than two years were to pass, however, before United States policy regarding the power and navigation development was clearly defined. In July 1953, the Federal Power Commission announced its decision to grant a licence to the Power Authority of the State of New York to undertake the United States share of the power development. Appeals against this decision by opponents requesting a re-hearing were dismissed. A final appeal was taken to the Supreme Court of the United States. On June 7, 1954, the Supreme Court rejected the appeal and thereby removed the last legal obstacle to the power project. It was then possible for Canada to proceed with an all-Canadian seaway. However, since the United States Government had, early in 1954, approved a measure of United States participation in the seaway, negotiations were continued by the two countries with regard to the navigation features of the scheme.*

The flow of the St. Lawrence River provides one of the most dependable sources of power in the world. The principal structures of the new development on the St. Lawrence River consist of two power-houses and two dams. The structure incorporating the power-houses, in conjunction with a dam at the foot of the Long Sault Rapids, will establish a head-pond about 125 miles downstream from the eastern end of Lake Ontario. The development will make use of most of the mean difference of 92 feet in the water levels between Lake Ontario and Lake St. Francis. The operating head will range from 76·6 to 87·6 feet and the normal head will be 83 feet.

---

* *See* the special article on "The St. Lawrence Seaway", Chap. XIX.

The construction operations in connection with the power houses and dams will not interrupt navigation in the present 14-foot canal. The structure incorporating the power-houses will have a maximum height of 162 feet above the foundation and an over-all length of 3,300 feet. It will span the channel between the eastern end of Barnhart Island and the Canadian shore, almost three miles west of Cornwall, and will be bisected by the International Boundary. The Canadian power-house, simple and functional in style, will be of the modified outdoor type, having removable housings rather than the conventional superstructure over the generating equipment. Each of the two power-houses will have 16 generating units. The switchyard for the United States power-house will be on Barnhart Island, the switchyard for the Canadian power-house will be located on the Canadian mainland.

The Long Sault dam will reach from the upper end of Barnhart Island to the United States mainland and will control the levels of the water in the head-pond, allowing any excess water to by-pass the power-houses as required. This dam will be a concrete, gravity, curved-axis, spillway structure, 2,250 feet long and having a maximum height of about 145 feet above the foundation. Its discharge capacity will far exceed the maximum flow of the river. The spillway section will have thirty vertical lift gates, each 50 feet in width.

The Iroquois dam will be about 25 miles upstream from the Long Sault dam and located between Iroquois Point on the Canadian side and Point Rockway on the United States side of the river. Its main purpose will be to regulate the flow of water from Lake Ontario.

In addition, some 14 miles of dykes will be required as well as improvements in the river channels in order to meet certain navigation and power requirements.

Preparations for the building of cofferdams and for dewatering the construction sites were begun in July 1954, and work was proceeding by the late summer. The first units are scheduled to be placed in service in 1958.

When the head-pond is raised to full level, areas on both sides of the river will be inundated. On the Canadian side the flooded area, about 20,000 acres extending along a 46-mile stretch of the river, will include the village of Iroquois, the hamlets of Aultsville, Farrans Point, Dickinson's Landing, Wales, Moulinette, and Mille Roches, and one-third of the town of Morrisburg. Some 6,500 people in this area will be affected. Between thirty-five and forty miles of railway line and approximately thirty-five miles of highway must be relocated, and all trees and structures will be removed from the land to be inundated.

Proposals for community planning and rehabilitation are being developed and as these proposals receive acceptance they will become a part of the over-all plan for the re-establishment of the communities in the St. Lawrence valley.

The investigations of 1913 and subsequent years into the power possibilities of the St. Lawrence River were again continued and expanded in the area of the present proposed power development in April 1952 when Commission crews began an intensive survey of the physical structure of the river-bed and the surrounding terrain. In boats piloted by experienced rivermen, Hydro surveyors crossed the river at regular intervals, exploring its contours by means of echo-sounders, while delicate recording instruments reproduced an accurate picture of the river-bed itself. In the vicinity of the Long Sault Rapids it was not possible to use these methods to obtain the accurate information required since the small sounding boats could not navigate in the rapids. Furthermore, the turbulence of the water interfered with the operation of the echo-sounders. Hydro crews solved the difficulty by taking soundings from a marker suspended by a fine wire from a helicopter hovering over a given point. Surveyors also metered the flow of the river in key sections. By correlating these data with information previously obtained, engineers were able to construct hydraulic models of the International Rapids Section. The models accurately simulate river conditions in the 35-mile section which they reproduce, duplicating to scale the shore line, the contours of the river-bed, and the flow of the water. They also provide the opportunity to test methods of carrying out the power project, assist in determining the best type of construction for the principal structures, and serve to indicate in advance of actual construction where substantial economies can be effected.

Other studies were undertaken to reveal the dyke-building qualities of the soil in the district and to determine the most appropriate locations for the dykes themselves.

When electric power is finally obtained from the St. Lawrence development, Canada's share will be fed into the grid serving the southern and northeastern part of the Province. In this highly productive area are located many of Canada's large industrial developments and the main sources of some of the country's vital raw materials. The supply of electric power has been an important factor in the productivity of the Province and the St. Lawrence power project will undoubtedly assist in its continuing economic development.

Section 2.—The Central Electric Station Industry

Central electric stations are companies, municipalities or individuals selling or distributing electric energy, whether generated by themselves or purchased for resale. Stations are divided into two classes according to ownership, viz.: (1) commercial—those privately owned and operated by companies or individuals, and (2) municipal—those owned and operated by municipalities or governments. These are subdivided according to the kind of power used into (*a*) hydraulic, (*b*) fuel, and (*c*) non-generating. This last sub-class purchases practically all the power it resells; a few of these stations have generating equipment that is held for emergencies. The hydraulic stations contain water turbines and wheels with approximately 88 p.c. of the total capacity of hydro installations in all industries in Canada. The generators driven by this hydraulic equipment generate 96 p.c. of the total output of all central electric stations.

4.—Electric Energy Generated, by Type of Station, 1938-52, and by Province, 1952

Year	Generated by—		Total	Year, Province or Territory	Generated by—		Total
	Water Power	Thermal Power			Water Power	Thermal Power	
	'000 kwh.	'000 kwh.	'000 kwh.	1952	'000 kwh.	'000 kwh.	'000 kwh.
1938	25,687,568[r]	466,592[r]	26,154,160	N'f'ld	228,875	4,416	233,291

Subsection 1.—Statistics of Central Electric Stations*

The growth of the central electric station industry has been practically continuous since 1919, when statistics of kilowatt hours generated were first made available. The general movement has been strongly upward and, based on monthly data, the output of central stations during 1952 was more than eleven times that of 1919. The central electric station industry is one that is particularly suited to large-scale operation because of the huge outlay of capital necessary. Total horsepower installed increased almost continuously even during the depression years, mainly because large power projects planned before the depression were in process of construction. Expansion since the end of World War II has been spectacular and large additional developments are currently under way (*see* pp. 546-549). Installed capacity of the industry in hydro and thermal units is now about equal to one horsepower for every Canadian.

---

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

5.—Summary Statistics of Central Electric Stations, 1943-52

NOTE.—Figures for 1917-31 are given in the 1940 Year Book, p. 369, and for 1932-42 in the 1950 edition, p. 564.

Domestic Service.—Power used by domestic customers or for residential purposes amounts to over 14 p.c. of the total production of central electric stations. Details of the number of domestic customers served, the kilowatt hours delivered and the costs to the customers, exclusive of direct federal, provincial and municipal taxes on such service, are shown in Table 7. The average consumption per customer and average cost per kilowatt hour vary considerably as between municipalities and also as between provinces, but the differences in the average bills are smaller. The availability of low-cost power to domestic users contributes greatly to the high standard of living in Canada. Average consumption per customer is almost double that of 1939 and costs are 13 p.c. lower per kilowatt hour.

7.—Summary Statistics of Domestic Consumption of Electricity, 1943-52

1952	3,112,306	8,741,182	2,809	46·48	1·65

Farm Service.—Table 8 shows the number of farm customers, the average annual consumption, average annual revenue and the average revenue per kilowatt hour sold to these customers in each province in 1951 and 1952. Rural electrification has made considerable progress since the end of World War II. Farm customers added during 1952, totalled 23,525 and the national total at 359,870 increased by 7 p.c. over 1951. The relatively large numbers of farm customers in Ontario and the low average revenue per kilowatt hour is evidence of the assistance given in this field by the Ontario Government. It is estimated that about 57 p.c. of the farm dwellings in Canada enjoy the benefits of power-line service. Many other farms generate their own electricity by the use of engines, windmills, etc.

[1] Does not include Newfoundland, Yukon Territory or Northwest Territories.

Equipment of Central Electric Stations.—Auxiliary equipment includes only thermal engines and generators operated by them in hydraulic stations and in non-generating plants and does not include spare equipment in thermal stations or spare hydraulic equipment in hydraulic stations. Such equipment is classed as main-plant equipment. The capacities of the equipment are the manufacturers' ratings and, for water wheels and turbines, the kilowatt hour capacities vary with the supply of water. The majority of the hydraulic stations are large, serving wide areas over transmission lines, whereas most of the plants with thermal engines are small, serving the needs of the local municipality. In 1952, the number of thermal engines decreased as compared with previous years. Larger units are being installed to replace, in some instances, two or three small units. Equipment data were not included for small industries or firms, particularly in Saskatchewan and Alberta, where output was largely consumed by their own plants.

9.—Main-Plant Equipment of Central Electric Stations, by Province, and Total Auxiliary-Plant Equipment, 1951 and 1952

Note.—Kva. means kilo-volt-amperes.

Export and Import of Electric Power.—Electric energy is exported from Canada only under licence and an export tax of 0·03 cents per kilowatt hour is levied with some exceptions. The export duties for the years ended Mar. 31, 1950 to 1953, were $431,895, $608,602, $743,407 and $738,918, respectively.

Exports for the years 1950-53 are shown in Table **10**. There are also large interprovincial movements of electric energy from Quebec to Ontario, and smaller movements from Nova Scotia and Quebec to New Brunswick, Manitoba to Ontario, Saskatchewan to Manitoba and British Columbia to Alberta.

The water allowed to be diverted at Niagara Falls for power purposes was increased by 5,000 cu. feet per second to the Canadian side in November 1940, owing to a diversion of water from Long Lake and the Ogoki River from the James Bay watershed to the Great Lakes watershed. In 1941, a further increase of

9,000 c.f.s. to the Canadian plants and 12,500 c.f.s. to the United States plants was permitted, and in 1943 an additional 4,000 c.f.s. to Canadian plants, bringing the totals up to 54,000 c.f.s. for Canada and 32,500 c.f.s. for the United States. This increased water, with greater development of plants on the St. Lawrence River, made possible the increased export of both firm and secondary power to the United States (5,000 c.f.s. will produce about 150,000 h.p. at the Queenston, Ont., plant). During 1950-51, increased demands from domestic consumers and low water reduced the surplus energy available for export but exports increased in 1952 and decreased slightly in 1953.

Subsection 2.—Ownership and Regulation of Central Electric Stations*

Water power is developed in Canada by provincial commissions, by municipalities and by private companies—hydro-electric plants. The first such provincial commission was formed in Ontario in 1906 to act as trustee for a group of municipalities to develop and distribute electricity. The Hydro-Electric Power Commission of Ontario now generates and purchases power, transmits it to rural and urban municipalities and serves large power customers. Similar commissions have been formed in most of the other provinces.

---

* The information included under the provincial headings of this Subsection has been revised by the various provincial commissions or authorities concerned.

[1] Figures include Newfoundland since 1949.

A large portion of the power development in Quebec is connected with pulp and paper plants and with the aluminum industry. Such power plants are operated as separate organizations and deliver power to the parent companies at relatively low rates. Substantial blocks of power are also produced in Quebec for export to Ontario.

Table 12 shows statistics of municipally or publicly owned central electric stations, by province, for 1951 and 1952. Table 14 shows comparable statistics for commercial stations.

Summary statistics of privately owned central electric stations are given for the years 1943 to 1952 in Table **13**.

13.—Summary Statistics of Privately Owned Central Electric Stations, 1943-52

Year	Generating Power Plants	Customers	Electric Energy Generated	Power Equipment (main-plant only)	
				Water Wheels and Turbines	Total
	No.	No.	'000 kwh.	h.p.	h.p.
1943	425	1,009,603	31,082,239	7,069,774	7,239,936
1944	424	753,239	25,688,581	6,175,674	6,373,523
1945	392	766,554	25,530,857	6,098,240	6,294,121
1946	397	826,091	26,997,716	6,104,383	6,301,996
1947	377	870,408	27,665,524	5,750,950	5,936,125
1948	393	937,385	25,697,293	5,837,670	6,045,218
1949[1]	391	1,042,951	26,731,889	6,188,921	6,429,303
1950	395	1,068,867	28,432,404	6,471,350	6,716,066
1951	377	1,124,441	30,471,042	6,831,792	7,132,972
1952	337	1,175,923	32,883,227	7,264,376	7,548,910

[1] Figures include Newfoundland since 1949.

The predominant position of Quebec in the electric-power field can be seen from the figures of Table 14. Of the total power generated in Canada by all central electric stations in 1952, 41 p.c. was generated by privately owned or commercial stations in the Province of Quebec; this percentage decreased from 57 in 1943 as a result of the transfer in 1944 of the Montreal Light, Heat and Power Company and the Beauharnois Power Company to the publicly owned Quebec Hydro-Electric Commission.

14.—Privately Owned Central Electric Stations, by Province, 1951 and 1952

Year and Province or Territory	Generating Power Plants	Customers	Electric Energy Generated	Power Equipment (main-plant only)

In 1952, all stations in Ontario produced a little more than one-half as much power as the Quebec stations. Of the total for Ontario stations 11 p.c. was produced by privately owned stations.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies of the provincial electric-power commissions, their functions and activities are summarized by provinces in the following paragraphs. Certain privately owned utilities are also covered.

Newfoundland.—There are no publicly owned hydro-electric systems in Newfoundland. The largest water-power development in the Province is located at Deer Lake. The plant, which is operated by Bowater's Newfoundland Pulp and Paper Company Limited, has a total capacity of 150,000 h.p. This Company develops hydro-electric energy at Deer Lake mainly for its own use in the manufacture of pulp and paper and also supplies electric power to the Buchans Mining Company for its mining operations and to the Newfoundland Light and Power Company Limited which distributes electricity to consumers in Corner Brook and adjacent communities in the Bay of Islands sections.

The Anglo-Newfoundland Development Company Limited develops hydro-electric power at two plants situated at Grand Falls and Bishop's Falls with a total capacity of 59,900 h.p. The Company utilizes most of its hydro-electric power in the manufacture of pulp and paper and supplies light and power to the towns of Grand Falls, Bishop's Falls, Botwood and adjacent communities.

The Newfoundland Light and Power Company Limited has seven plants that develop hydro-electric energy with a total installed capacity of 55,400 h.p. It distributes electricity to the city of St. John's and the town of Bell Island and the iron-mining operations there.

The United Towns Electric Company Limited operates seven plants, of which five are located at Conception Bay and two on the Burin Peninsula. The Company sells light and power to communities on the Avalon and Burin Peninsulas and to the fluorspar mining operations at St. Lawrence on the Burin Peninsula. It developed 27,398,345 kwh. during 1953. The West Coast Power Company, a subsidiary of the United Towns Electric Company, operates a plant on Lookout Brook, a tributary of Flat Bay Brook which flows into St. George's Bay. It generated 15,166,800 kwh. in 1953.

Two small companies, the Clarenville Light and Power Company and the Union Electric Company, operate plants at Clarenville and Port Union, respectively.

Nova Scotia.—Legislation relating to the use of water power was first enacted in Nova Scotia in 1909 under "An Act for the Further Assistance of the Gold Mining Industry". In 1914, legislation was passed initiating the development of water power in the Province and this was carried on in an investigatory manner in co-operation with the Federal Government until 1919 when the Nova Scotia Power Commission was created under the Power Commission Act. Certain investigatory work is still carried on in Nova Scotia by the Federal Government in close association with the Commission. The control of the water resources of the Province is vested in the Crown and is administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays the regular fees for water rights.

The function of the Commission is to supply electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing for financial assistance to equalize cost and revenue of extensions, the construction of which has been approved by the Governor in Council as qualifying under the Act. In 1941, an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the Province.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1953, showed total fixed assets of $36,678,943 including work in progress amounting to $575,166. Current assets amounted to $596,508. Liabilities are shown as follows: fixed $30,084,340; current $1,621,145; contingency and renewal reserves $3,413,504; sinking fund reserves $5,761,883; and general reserves and special reserves $1,998,798.

The initial development of the Commission was an 800-h.p. installation on the Mushamush River which went into operation in 1921 and delivered 208,752 kwh. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity, reaching 101,450 h.p. in hydraulic turbines, 3,167 h.p. in diesel units and 21,125 kw. in steam turbines by Nov. 30, 1953, with a total generation for that year of 417,219,885 kwh.

The territory of the Commission extends over the entire Province and embraces nine systems which include 25 generating stations and 4,114 miles of transmission and distribution lines, through which 51 wholesale and 27,246 retail customers received 402,928,690 kwh. during the year ended Nov. 30, 1953.

The installed capacity and annual output of the various systems of the Nova Scotia Power Commission are given in Table **15**.

15.—Capacity and Output of the Nova Scotia Power Commission, Year Ended Nov. 30, 1953

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned by the Commission are as follows:—

Plant	*Type*	*Capacity*
		h.p.
Musquash	Hydro	9,320
Tobique	Hydro	27,000
Grand Lake	Steam	58,700
Saint John	Steam	21,500
Chatham	Steam	16,800
St. Stephen	Diesel	2,800
Campobello	Diesel	300
Grand Manan	Diesel	900
Shippegan	Diesel	2,500
St. Quentin	Diesel	750
Total Capacity		140,570

All generating units, with the exception of diesel plants at St. Quentin and Grand Manan, are interconnected in a Province-wide grid system.

The statistical information given in Table **16** shows the growth of the Commission's undertakings since 1949.

16.—Growth of the New Brunswick Electric Power Commission, Years Ended Oct. 31, 1949-50 and Mar. 31, 1951-53

[1] Five months—Nov. 1, 1950, to Mar. 31, 1951. The Commission's fiscal year-end changed in 1951 from Oct. 31 to Mar. 31.

Quebec.—*The Quebec Streams Commission.*—Created by S.Q. 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (R.S.Q. 1925, c. 46) and 20 Geo. V, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the Province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. It has assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mainly by the regulation of the flow of the principal power streams through the construction of storage dams.

From 1912 to 1925, a number of storage reservoirs were built or acquired by the Commission, charges being made to benefiting companies to cover interest and amortization on the capital invested as well as the cost of operation. Since 1925, companies or persons have availed themselves of the latitude given them by R.S.Q. 1925, c. 46, to build the necessary dams; such storages have been transferred to and are operated by the Commission, the cost of operation only being charged annually to the interested companies or persons. The Commission now controls and operates 28 storage reservoirs in the Province.

Among the rivers controlled by the Commission, either by means of dams on the rivers or by controlling the outflow of lakes at the headwaters, are: the St. Maurice, now developing 1,538,150 h.p.; the Gatineau, 528,000 h.p.; the Lièvre, 274,000 h.p.; the St. Francis, 100,000 h.p.; the Chicoutimi, 41,400 h.p.; the Au Sable, 33,200 h.p.; and the Métis, 15,700 h.p. The Commission also operates nine reservoirs on North River, two in the watershed of the Ste. Anne-de-Beaupré River, and one at the outlet of Lake Morin, on Rivière-du-Loup (lower).

Reservoirs not Controlled by the Quebec Streams Commission.—Among storage-reservoirs not controlled or operated by the Commission are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; the Témiscouata Lake on Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the Federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Dozois Lake on the upper Ottawa River, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, have a total capacity of 1,950,000 h.p. now that the Chute-à-Caron (Shipshaw) project has been completed.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established by S.Q. 8 Geo. VI, c. 22, with the object of supplying power to the municipalities, industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration.

On Apr. 15, 1944, in accordance with the provisions of this Act, the Commission took over: *(a)* the system of Montreal Light, Heat and Power Consolidated for the generating and distribution of electricity; *(b)* the undertaking of the Montreal Island Power Company for the generating and distribution of electricity; and *(c)* all the shares of the capital stock of the Beauharnois Light, Heat and Power Company. Thus, the Quebec Hydro-Electric Commission now controls, among other assets, the following hydro-electric plants:*—

Plant	*River*	*Installed Capacity*
		h.p.
Cedars	St. Lawrence	206,400
Sault-au-Recollet	Rivière-des-Prairies	45,000
Beauharnois	St. Lawrence	1,400,000
Rapid VII	Upper Ottawa	64,000
Rapid II	Upper Ottawa	32,000

The Commission operates a public utility system which supplies electric light and power requirements to Greater Montreal and surrounding districts, embracing a population of nearly 2,000,000. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through Beauharnois Light, Heat and Power Company power is sold to The Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of 100,000 h.p. to Massena, N.Y., and 250,000 h.p. to Ontario.

---

* The Commission also purchases 135,000 h.p. from the Shawinigan Water and Power Company.

17.—Growth of the Quebec Hydro System, 1944-53

NOTE.—Figures for the years 1935-43 will be found in the 1950 Year Book, p. 572.

Year	Municipalities Served	Customers Served	Power Distributed	
			Total	Primary
	No.	No.	h.p.	h.p.
1944	61	298,767	1,060,000	897,000
1945	61	305,049	1,045,000	883,000
1946	61	309,022	1,085,000	947,000
1947	61	318,984	1,127,000	980,000
1948	61	330,799	1,202,000	1,034,000
1949	61	349,347	1,233,000	1,119,000
1950	64	368,026	1,296,000	1,182,000
1951	66	387,218	1,312,000	1,312,000
1952	67	400,779	1,620,000	1,462,000
1953	67	413,439	1,748,000	1,625,000

18.—Distribution of Quebec Hydro Primary Power, by Customer Group, 1948-53

(Coincident with Montreal System peak)

System	1948	1949	1950	1951	1952	1953
	h.p.	h.p.	h.p.	h.p.	h.p.	h.p.
Montreal System	620,000	669,000	730,000	803,000	873,000	997,000
Beauharnois Local System	36,000	70,000	65,000	171,000	189,000	213,000
Beauharnois 25-cycle System (H.E.P.C. of Ontario)	250,000	250,000	250,000	250,000	250,000	250,000
Massena System	128,000	130,000	137,000	80,000	135,000	142,000
Shawinigan System	—	—	—	8,000	15,000	23,000
Totals	**1,034,000**	**1,119,000**	**1,182,000**	**1,312,000**	**1,462,000**	**1,625,000**

In addition to these generating and distributing systems, the Quebec Hydro-Electric Commission owns the 64,000-h.p. upper Ottawa River plant at Rapid VII, the 32,000-h.p. Rapid II plant and also the Dozois Reservoir. Average primary power capacities for this Northern Quebec System (Cadillac-Noranda district) are as follows: 1948, 21,270 h.p.; 1949, 34,790 h.p.; 1950, 35,500 h.p.; 1951, 30,550 h.p.; and 1952, 29,200 h.p.

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate body administering a province-wide enterprise for the production and distribution of electric power. The three members of the Commission are appointed by the Lieutenant-Governor in Council, who may also name one of the members to be Chairman. One commissioner must be a member, and two may be members, of the Executive Council of the Province of Ontario.

The Commission was created in 1906 by an enactment of the Ontario Legislature after consideration of recommendations made by advisory commissions. These had been appointed in response to public demand that the water powers of Ontario should be conserved and developed for the benefit of all the people of the Province.

The Commission operates under the authority of the Power Commission Act (7 Edw. VII, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified by numerous amending Acts (R.S.O., 1950, c. 281). It is a separate entity, a self-sustaining public concern endowed with broad powers to produce, buy and deliver electric power, and to perform certain regulatory functions with respect to the municipal electrical utilities that it serves. The enterprise represented by the Commission is generally known as the Ontario Hydro.

Initially, the undertaking proposed to purchase a block of 100,000 h.p. from the Ontario Power Company Limited at Niagara Falls and to distribute this to 13 municipalities which had signed the original contracts with the Commission to take power at cost. Construction of a transmission system to distribute power to the member municipalities was begun in 1909 and, by the end of the following year, power was being supplied to several of them. The Commission also built a short transmission line and a substation to serve Port Arthur with power purchased from the Kaministiquia Power Company. These two pioneer systems eventually grew into the Southern Ontario and the Thunder Bay Co-operative Systems.

The Southern Ontario System developed through a series of consolidations of various smaller systems. The establishment of the original Niagara System was followed in 1911 by the formation of the Severn System and subsequently of other systems to serve groups of municipalities in various sections of the Province. In 1924, the Severn and two other systems were consolidated to form the Georgian Bay System and in 1929 and 1930 a consolidation of four systems created the Eastern Ontario System. In 1944, the Southern Ontario System came into being through the consolidation of the Niagara, Georgian Bay, and Eastern Ontario Systems.

The Commission continued to operate the Thunder Bay System in the northern part of the province and, in addition, it undertook during the 1930's to operate, in trust for the provincial government, a group of unconnected systems serving mainly mining and pulp and paper industries, and known as the Northern Ontario Properties. In 1945, its services in northern Ontario were further extended by the purchase of the power system of the Northern Ontario Power Company Limited. On Jan. 1, 1952, the Northern Ontario Properties and the Thunder Bay System were merged for financial and administrative purposes and the consolidation continues to be known as the Northern Ontario Properties.

In the Southern Ontario System, and in the Northern Ontario Properties as at present constituted, the Commission's customers include municipal electrical utilities, certain large industrial users, and retail customers in the Rural Power District of the Province and in a small group of municipalities known as local systems.

The Southern Ontario System serves the older and more populous part of Ontario lying south of a line drawn from Mattawa on the upper Ottawa River approximately west to Georgian Bay. Primarily, it serves a group of 314 municipalities receiving power at cost under contracts established according to the provisions of the Power Commission Act. It is, therefore, referred to as a co-operative system.

The Northern Ontario Properties is not a co-operative system in the same sense, though it continues to serve, at cost, the municipalities that were formerly members of the Thunder Bay Co-operative System. It also continues to operate, in trust for the Province, a large part of the facilities serving the industrial and mining areas of northern Ontario. The Northern Ontario Properties comprises two divisions, the Northeastern and the Northwestern Divisions, which in themselves are integrated operational and administrative units. The two Divisions together serve the territory extending in the northern part of the Province from the Quebec boundary to the boundary of Manitoba. There is no power connection between the Divisions, but since 1950 the Northeastern Division has been interconnected with the Southern Ontario System.

THE
HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO
LEGEND
HYDRO-ELECTRIC

The growth of Ontario Hydro's resources, both physical and financial, reflects the remarkable industrial and social development of the Province. In 1914, the Commission purchased its first generating station, Big Chute on the Severn River. Later in the same year, the first Commission-built generating station at Wasdell Falls, also on the Severn River, was placed in service. The program of purchase and construction of generating stations thus launched reached a climax in the construction of the great Queenston-Chippawa development, later renamed Sir Adam Beck-Niagara Generating Station No. 1 in honour of the first Chairman of the Commission. This station first delivered power in 1922. Yet, commencing four years later, the Commission found it necessary to negotiate for the extensive purchase of power from large Quebec suppliers in order to satisfy Ontario's steadily growing power demands.

In 1953, primary and secondary load carried reached a maximum of 3,480,646 kw., and during the year a total of 20,912,445,364 kwh. was supplied from all the Commission's resources, generated and purchased.

During the past ten years, growing demands for power have taxed the capacities of the Commission's resources, and only by a most aggressive program of new construction has it been possible to keep pace with the increased requirements. With due allowance for revisions in the capacity of various sources, this program had served to bring the dependable peak capacity at the end of 1953 to 3,565,350 kw., an increase of 1,627,850 kw. since 1945. The combined output of the Otto Holden, Des Joachims, and Chenaux Generating Stations on the upper Ottawa River accounts for 710,000 kw. of this additional power. Other notable hydro-electric developments have been the George W. Rayner Generating Station in Ontario's northeastern mining area and Pine Portage Generating Station in the Northwestern Division. In 1953, a program of construction and expansion was completed at the large fuel-electric stations at Toronto and Windsor, named the Richard L. Hearn Generating Station and J. Clark Keith Generating Station, respectively. In the operation of these two stations, the Commission made its initial entry into fuel-electric generation on a large scale. In addition, the Commission, in 1953, established interconnections with the Detroit Edison Company at Windsor, Ont., and near Sarnia. Through these facilities mutual assistance may be provided at times of emergency. Furthermore, each of the interconnected systems will be able to take advantage of economies brought about by the exchange of any surplus energy that may from time to time become available. During 1953, the interconnecting facilities made a significant contribution towards meeting primary power and energy requirements in the Southern Ontario System and the Northeastern Division of the Northern Ontario Properties.

During 1953, the major generation projects under construction were the new Manitou Falls Generating Station on the English River, the addition of two units at Pine Portage Generating Station on the Nipigon River, and the Sir Adam Beck-Niagara Generating Station No. 2, near Queenston on the Niagara River.

By far the largest of these projects is Sir Adam Beck-Niagara Generating Station No. 2. Initially, 12 units at the station will have an installed capacity of 900,000 kw. In order, however, to make maximum use of the water made available under the Niagara Diversion Treaty of 1950, plans were made for the subsequent incorporation of a pumped-storage installation and for the ultimate addition of four more units at the station itself, which will bring the total installed capacity of the project to 1,370,000 kw.

From the intake on the Niagara River, about two miles above Niagara Falls, water will be conveyed for about five miles by two hydraulic pressure tunnels that pass under the city of Niagara Falls and reach a maximum depth of over 300 ft. below the surface. From the point where the tunnels return to the surface, the water will flow through a $2\frac{1}{4}$-mile canal to the forebay which adjoins the forebay of the Sir Adam Beck-Niagara Generating Station No. 1 immediately to the north. To the north of the canal will be the pumped-storage reservoir, some 700 acres in extent and capable of storing 650,000,000 cu. ft. of water. At times of low demand, water will be raised by reversible pumps to a level varying from 60 to 86 ft. above the canal. At peak demand periods, it will return to the forebay through the pumps, functioning as turbines, and may provide up to 170,000 kw. at the same time augmenting the flow to the two Sir Adam Beck-Niagara Generating Stations. Thus, additional capacity can be made available at time of system peak, and fuller use can be made of all generating units at times of high demand, particularly when restrictions on the use of water would otherwise prevent the operation of generating facilities to capacity. Provision has been made in the headworks and in the widening of the canal itself for the eventual installation of the four additional units, when required, at Sir Adam Beck-Niagara Generating Station No. 2.

Acting upon the recommendations of the International Joint Commission, and working in close liaison with the United States Army Corps of Engineers, Ontario Hydro in 1953 began the construction of remedial works above the Falls on the Canadian side of the Niagara River. The works include a 1,500-foot-long control dam at Grass Island Pool, and require both the excavation of channels and the filling in of the extremities of the crest on both sides of the cataract. The purpose is to enhance the scenic beauty of the Falls and reduce erosion at the centre by creating a more uniform flow over the 2,600-foot crestline of the cataract, and at the same time to contribute to the most effective use of water for power production.

The addition of two units at Pine Portage Generating Station now being undertaken will complete the installations for which the station was originally designed and will bring the total dependable peak capacity of the four units to 118,300 kw. Construction of the new hydro-electric station at Manitou Falls on the English River was begun in 1953 and will have three units with a total dependable peak capacity of 42,100 kw.

The development of the International Rapids Section of the St. Lawrence River for power was also carried forward during 1953 when the Federal Power Commission of the United States granted a licence to the Power Authority of the State of New York to carry out the United States part of the work. The last legal obstructions to the undertaking were overcome in June 1954. (*See* special article, The St. Lawrence Power Project, pp. 549-553).

In October 1953, the complex program of frequency standardization entered its fifth year. By the end of the year, standardization operations had been completed for well over a third of the estimated number of customers requiring the standardization of equipment. The standardization operation had been completed in 84 municipalities and part of the work had been done in 26 others. Sixteen rural operating areas had been completely standardized and part of the work had been done in 15 other rural operating areas.

The basic principle governing the financial operations of the Commission is that electrical service is provided by the Commission to the municipalities, and by the municipalities to their customers, at cost. Cost includes all charges for operating and maintenance, for interest on capital investment, and reserves covering depreciation, contingencies and obsolescence, and for the stabilization of rates. It also includes a reserve for a sinking fund to retire the Commission's capital debt.

The undertaking from its inception has been self-supporting, apart from the assistance given by the provincial government which provides 50 p.c. of the capital cost of rural distribution facilities in pursuance of its long-established policy of assisting agriculture. The Province also guarantees the payment of principal and interest of all bonds issued by the Commission and held by the public.

The undertaking as a whole involves two distinct phases of operations as follows: The *first* phase of operations is the provision of the power supply—either by generation or purchase—and its transformation, transmission and delivery in *wholesale* quantities to municipal electrical utilities, certain large industrial customers, and rural operating areas. This phase of operations is performed by The Hydro-Electric Power Commission of Ontario. The *second* phase of operations is the *retail* distribution of electric energy. In most cities and towns, in many villages, and in certain thickly populated areas of townships, retail distribution of electric energy is conducted by municipal commissions under the general supervision of The Hydro-Electric Power Commission of Ontario as provided for in The Power Commission Act and the Public Utilities Act. These local commissions own and operate their own distribution facilities. The Hydro-Electric Power Commission of Ontario owns the distribution facilities and conducts retail distribution in a small number of municipalities through what are called local systems. Throughout most of rural Ontario, the Commission, on behalf of the respective townships, operates the distribution facilities and attends to all physical and financial operations connected with the retail distribution of energy to the customers in the rural operating areas. Since 1944, the rate structure applying to the Commission's farm, hamlet, commercial and summer service customers has been uniform throughout the Province.

The balance sheet of the Commission shows that gross investment in fixed assets at Dec. 31, 1953, amounted to $1,354,642,244, against which there was an accumulated reserve for depreciation of $151,285,057. Included in the gross investment is an amount representing rural assets under administration totalling $167,009,485. Of this amount, $83,222,684 represents the assistance given by the Province of Ontario for rural construction. The Commission's assets, allowing for the deduction of accumulated depreciation, stood at $1,491,302,267.

The 332 municipal electrical utilities, which operate under cost or fixed-rate contracts with the Commission and distribute power in 337 municipalities in the Province, had a gross investment in fixed assets amounting to $214,595,383. The provision for depreciation amounted to $54,282,571. Municipal assets, after deduction of this depreciation reserve, were $336,613,672, of which $140,068,857 represented the equity of the municipalities in the Commission's Systems.

The following tables give statistics of resources generated and purchased, development program, distribution and service of the Commission.

19.—Resources of The Hydro-Electric Power Commission of Ontario Generated and Purchased (All Systems), December 1952 and 1953

Year and System	Commission's Generating Stations				Power Purchased

Totals, Resources	**2,229,950**	**2,989,209**	**652,500**	**874,665**	**682,900**	**915,416**

[1] Dependable peak capacity—the amount of power subject to periodic change as equipment and water conditions vary, which the source is expected to be able to supply at the time of the system's peak demand. For the Commission-owned or Commission-operated generating stations, it is presumed that all units are available and that the supply of water is normal. Contractual stipulations govern the capacities of sources of purchased power.

20.—Summary of Development Program of The Hydro-Electric Power Commission of Ontario (1945-58), as at Dec. 31, 1953

System and Development	In Service	Dependable Peak Capacity
		kw.
Southern Ontario System—		
DeCew Falls (extension)—Niagara Region	September 1947	57,000
Stewartville—Madawaska River	September 1948	63,000

1953	1,279	1,389,750	3,480,646	1,687,847,082

[1] Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year. [2] Owing to the change in the Commission's fiscal year to coincide with the calendar year, figures shown here for 1950 cover the 14 months ended Dec. 31, 1950.

Manitoba.—The Manitoba Power Commission was established in 1919 for the purpose of distributing electric energy, both wholesale and retail, throughout the Province, with the exception of the Greater Winnipeg area. The utility currently operates under authority of an Act respecting the Manitoba Power Commission (R.S.M. 1940, c. 166), as amended.

The Commission's supply of electric energy for distribution is purchased from the Winnipeg Electric Company at various points, chiefly at or near the city of Winnipeg. Arrangements for the Commission's purchase of power are contained in the Seven Sisters Agreement of 1928 between the Province of Manitoba and the Winnipeg Electric Company. The Commission has gradually acquired practically all of the municipally owned and privately owned generating plants operating within its jurisdiction and has spread a network of transmission lines across the Province. All energy distributed is now generated by hydro power.

The Commission's program, started in the 1930's and designed to bring hydroelectric power at uniform service rates to all rural centres of 20 or over population, is now virtually complete and currently serves 481 centres. In 1942, the Manitoba

Electrification Enquiry Commission was appointed by the Provincial Government to study the feasibility of widespread farm electrification in the Province. It was concluded that, with the Manitoba Power Commission's network of transmission lines as a source of supply and with the economy in design of farm lines that had been worked out, it would be practicable to bring the benefits of hydro-electric power to over 90 p.c. of the farms in the Province, provided the farmers themselves were prepared to assist in certain organizational and operational matters. A test program undertaken in 1945 proved successful and, thereafter, the Commission conducted annual programs of farm electrification. By 1948, the Commission's annual goal of 5,000 farms was achieved and the program has proceeded at that rate ever since. Manitoba's farm electrification project on an area-coverage basis is now complete. The Manitoba Power Commission has connected electrical service to more than 39,000 farms, 75 p.c. of the Province's total. Over 90 p.c. of the citizens of the Province are now in areas where central electric station power is available to them. In all, the Commission now serves more than 95,000 customers and this figure will exceed 100,000 during 1954. The only farms remaining to be served are those in isolated pockets that may now be feasibly added to the Commission's system and farmers in previously-energized areas who have not yet availed themselves of the opportunity of taking service.

Saskatchewan.—Saskatchewan Power Corporation, established Feb. 1, 1949, and operating under the provisions of the Power Corporation Act 1950 (Statutes of Sask. 1950, c. 10), as amended, succeeded the Saskatchewan Power Commission which operated from Feb. 11, 1929, to Jan. 31, 1949. The main functions of the Saskatchewan Power Corporation are the generation, transmission, distribution, sale and supply of electric energy and steam. It is also authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas into which field the Saskatchewan Power Corporation stepped in 1952.

Particulars of the operations of the Saskatchewan Power Commission during the period 1929-48 and of the operations of the Saskatchewan Power Corporation during 1949-52 are given in earlier editions of the Year Book.

The Saskatchewan Power Corporation is experiencing extensive growth similar to that of its predecessor—Saskatchewan Power Commission. In 1953 the Corporation served 628 urban communities (with six customers and more) in retail sales and three urban communities (Saskatoon, Swift Current and Battleford) in bulk sales. Its activity is extended to the entire province with the exception of such cities as Regina and Weyburn which own and operate municipal plants and distribution systems, and Moose Jaw where the local plant and distribution system is owned and operated by National Light and Power Co. Limited. A certain number of small communities, the largest of them being the town of Kamsack, are not as yet served by the Saskatchewan Power Corporation. Some of these utilities, mostly privately owned, were taken over by the Corporation in 1953.

At the end of 1953 the Corporation served 122,676 customers. Of this total 22,570 customers were located in communities which were supplied with power in bulk sales and 100,106 customers were Saskatchewan Power Corporation's retail customers. The latter group comprised 82,591 customers in the communities considered as urban and 17,515 customers were classified as rural, predominantly farms. During 1953 all customers absorbed 398,211,673 kwh. of which 359,028,165 kwh.

were generated in Corporation plants and 39,183,508 kwh. were purchased in bulk from Regina and National Light and Power utilities. Total invested capital of the Corporation at the end of 1953 (including gas distribution) amounted to $49,900,004.

During 1953 the Saskatchewan Power Corporation owned and operated four steam generating plants (at Estevan, North Battleford, Prince Albert, Saskatoon) and 10 diesel plants with capacities over 500 kw. each (at Assiniboia, Hudson Bay, Maple Creek, Meadow Lake, Moosomin, Shaunavon, Swift Current, Unity, Wynyard and Yorkton). The total available capacity of the Corporation in generating plants at the end of 1953 was assessed at 115,535 kw., of which 97,950 kw. was located in steam plants and 17,585 kw. in diesel plants.

At the end of 1953 the Saskatchewan Power Corporation owned and operated 18,256 miles of transmission and rural lines. Of this total, 5,205 miles of line were added to the system in 1953. They comprise 104 miles of 69,000 volt-line (Kerrobert-Kindersley and Estevan-Weyburn), 253 miles of 24,000 volt-line (Ogema-Ormiston, Kennedy-Wawota, Revenue-Landis, Gravelbourg-Bateman, Canwood-Big River, Unity-Vera and minor projects), and 4,848 miles of 13,800 volt-line in connection with rural electrification. Large substations were built in 1953 with the total capacity of 12,000 kva. (at Weyburn, Battleford, Unity and Yorkton).

23.—Growth of Saskatchewan Power Corporation (formerly Commission), 1945-53

NOTE.—Figures for 1929-33 are given at p. 499 of the 1947 Year Book, and for 1934-44 at p. 578 of the 1950 edition.

Year	Communities Served in Bulk and Retail Sales	Individual Customers in Communities Served	Power Distributed	Revenue
	No.	No.	kwh.	$
1945	150	40,968	106,539,448	2,677,289
1946	229	45,495	118,990,127	3,141,652
1947	320	63,805	160,420,859	4,442,507
1948	366	71,009	186,834,305	5,058,142
1949	420	78,389	202,135,947	5,629,372
1950	454	84,361	235,926,656	6,363,597
1951	535	93,923	278,826,919	7,159,876
1952	582	107,942	332,674,176	8,553,619
1953	631	122,676	398,211,673	10,363,752

Alberta.—Public ownership of power-generating and -distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the Province: Calgary Power Limited, Canadian Utilities Limited, and Northland Utilities Limited. A synopsis of these services is given below.

Calgary Power Limited.—This Company has eight hydro-generating plants on the Bow River and its tributaries, west of Calgary, namely: Horseshoe Falls, Kananaskis Falls, Ghost River, Cascade, Barrier, Spray, Rundle and Three Sisters. At Dec. 31, 1953, the Company's total plant capacity was 206,550 h.p. All the plants except Horseshoe Falls are operated by remote control from the Kananaskis Falls Plant.

The Company has four reservoirs on the Bow River and its tributaries: Lake Minnewanka, 180,000 acre-feet; Interlakes (Kananaskis Lakes), 90,000 acre-feet; Spray Lakes, 200,000 acre-feet; and Ghost, 74,000 acre-feet.

An agreement with the City of Medicine Hat provides an additional 33,500 h.p. to the Company from the city's steam plants. Power from these plants is fed into a transmission network which supplies the entire electrical requirements of the cities of Calgary, Red Deer and Wetaskiwin, about 290 towns, villages and hamlets, and a substantial industrial load in central and southern Alberta. This transmission network also ties in with the municipal utilities of Edmonton and Lethbridge, the Canadian Utilities Limited at Drumheller, Vegreville and Vermilion, and the East Kootenay Power Company in the Crowsnest Pass.

The Company has 3,810 miles of main transmission lines and 675 miles of distribution lines extending from Westlock in the north, Milk River and Waterton in the south, and from Chauvin, Macklin (Saskatchewan), Brooks and Bow Island in the east, to Nordegg, Banff and Crowsnest Pass in the west. The cities of Calgary and Red Deer, and the towns of Ponoka, Fort Macleod and Cardston are supplied on a wholesale basis. All other points on this system are supplied on a retail basis. At Dec. 31, 1953, about 1,800 oil wells were being supplied with electric-pumping service as were other users directly related to the oil industry, such as gathering stations, refineries and pipeline-pumping, and also industrial plants near Edmonton.

An extensive farm-electrification program is in progress in Alberta and at Mar. 31, 1954, the Company was serving approximately 19,202 farms over 13,000 miles of farmer-owned Rural Electrification Co-operative Association rural transmission lines. The program calls for the addition of from 3,000 to 4,000 farms each year for the next several years. Calgary Power undertakes the engineering, construction and operation of these co-operatives through a non-profit subsidiary (Farm Electric Services Limited), energy being supplied to the farm co-operative consumers at cost.

Canadian Utilities Limited.—Towns and villages northeast of Drumheller are supplied from a 19,000-kw. coal-fired steam plant in that city. Towns and villages north and east of Vegreville are served from a 9,000-kw. gas-fired steam plant located at Vermilion. Towns and villages north and west of Grande Prairie are served from a 3,195-kw. diesel-engine plant located in that centre. There are tie lines with the Calgary Power Limited system at Vermilion, Vegreville and Drumheller. The Company serves over 28,400 customers in approximately 235 towns, villages and hamlets, including 73 rural electrification associations in the Province, through a network of approximately 2,500 miles of transmission and distribution lines, in addition to 3,990 miles of Rural Association lines. Since 1949, rural electrification in the territory served has been extended to farmers on a co-operative basis whereby the farm or Rural Electrification Association system is constructed and operated at cost by the Company for the farmer. Over 4,200 farmers are now receiving electric power service.

Northland Utilities Limited.—This Company, with headquarters at Edmonton, supplies electric energy to 5,700 consumers in 26 communities. Diesel-generating plants are located at Jasper, Athabasca, High Prairie, McLennan, Peace River, Lac La Biche, Manning, Fairview and at Hay River, N.W.T. Low-voltage transmission lines extending from these generating stations supply electricity to 370 farms and 17 villages. The Company also operates a hydro plant at Jasper.

Northland Utilities Limited serves 1,300 consumers with natural gas at Dawson Creek, B.C., 362 consumers at Fairview and Bluesky, and 569 at Grande Prairie, Sexsmith, Spirit River and Rycroft.

British Columbia.—The British Columbia Power Commission was appointed Apr. 17, 1945, under the provisions of the Electric Power Act, "an Act to provide for improving the availability and supply of electric power". Operations were commenced in August 1945 with the acquisition of electrical properties in several parts of the Province. The following statement shows the growth in the number of customers to April 1953:—

Year Ended Mar. 31	*Services Acquired*	*Services Installed*	*Total Services for Period*	*Cumulative Services to End of Period*
	No.	No.	No.	No.
1946 (from August 1945)	13,270	832	14,102	14,102
1947	7,151	1,786	8,937	23,039
1948	1,000	3,431	4,431	27,470
1949	831	3,318	4,149	31,619
1950	4,686	3,321	8,007	39,626
1951	473	4,075	4,548	44,174
1952	103	2,600	2,703	45,912
Sold June 1951	−325	−640	−965	
1953	—	3,597	3,597	49,509
1954	—	3,264	3,264	52,773

Highlight of recent expansion was the addition of the fifth and sixth generating units at the Commission's largest plant, the John Hart Development on Campbell River, Vancouver Island. The expansion, completed in the autumn of 1953 at a cost of about $4,500,000, increased the capacity of the plant from 112,000 to 168,000 h.p. (i.e., 80,000 to 120,000 kw.). The John Hart Development has been almost continuously expanded since it was started in 1945. The first two units were placed in operation late in 1947, the third and fourth in the autumn of 1949.

The John Hart Development now serves, through Commission transmission and distribution systems, territory on Vancouver Island between Duncan and Campbell River, including the Comox Valley, Alberni, Lake Cowichan and Nanaimo-Duncan power districts. The B.C. Electric Railway Company Limited takes delivery of power at Nanaimo and transmits a large block for distribution in Victoria and environs, so that the John Hart Development serves the main areas of Vancouver Island. The facilities provided as a result of this development have led to the establishment of three major industries on Vancouver Island—sulphate pulp mills at Nanaimo and Port Alberni, and a newsprint mill near Campbell River.

Growth in the smaller communities of the Province served by the Commission in number of customers and in average consumption per customer has necessitated steady expansion of most of the 19 diesel generating stations.

Other hydro plants operated by the Commission are the Whatshan Development on Lower Arrow Lake, which was completed in the summer of 1951 with a capacity of 33,000 h.p. (22,500 kw.), and the Clowhom Falls Development with 4,000-h.p. capacity. The Whatshan plant serves much of the Arrow Lakes area, but its main market is the rich fruit and dairy district of the North Okanagan and the Kamloops area. The Clowhom Falls plant serves the Sechelt Peninsula, up-coast from Vancouver.

24.—Growth of the British Columbia Power Commission, Years Ended Mar. 31, 1951-54

Item	1951	1952	1953	1954

Sources of power for the year ended Mar. 31, 1954, were as follows:—

Source of Power	*kwh.*	*p.c.*
Hydro-electric energy	634,100,242	91·0
Diesel-electric energy	51,611,544	7·4
Steam-electric energy	1,446,310	0·2
Purchased power	9,962,128	1·4
TOTALS	697,120,224	100·0

The Northwest Territories and Yukon Territory.—The Northwest Territories Power Commission was created by an Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation, passed in 1949, the Act was extended to include Yukon Territory.

The Northwest Territories Power Commission has authority to construct and operate power plants as required in a territory having an area of over 1,500,000 sq. miles. The Commission is continually investigating power needs in this large area and studying reports on hydro-electric power sites.

The Commission has a hydro-electric power development in operation on the Snare River about 94 miles northwest of Yellowknife, N.W.T. Power has been supplied from this plant to the mines in the Yellowknife area since the autumn of 1948 and, in the summer of 1949, a transmission-line connection was completed to augment the supply of power to the town of Yellowknife.

A diesel generating station and distribution system was put into operation at Fort Smith, N.W.T., in October 1950. This project supplies the various government establishments at Fort Smith, e.g., the Departments of Northern Affairs and National Resources, Transport, National Defence (R.C.C.S.), Health and Welfare, and Public Works as well as to the Royal Canadian Mounted Police and private commercial consumers and residents of the settlement.

A hydro-electric development was completed on the Mayo River approximately six miles north of Mayo Landing, Y.T., in December 1952. This plant is delivering power to the mining developments in that area and to the settlement of Mayo Landing.

The total capital investment of the Commission as at Mar. 31, 1954, was approximately $8,861,660.

Section 3.—Total Development of Electric Power from All Available Sources

In Section 1 of this Chapter total water-power resources are given with the proportion that, so far, has been developed. Table **3** of that Section analyses the hydraulic turbine installation by the proportions in central electric stations, in pulp and paper mills, and in other industries. This is useful material, but it does not take into account electric power developed in central electric stations or in other industries from sources other than hydraulic.

Section 2 covers the central electric station industry including stations under the public ownership of provincial and municipal governments and those under private ownership. Neither of these Sections, however, gives a complete presentation of the total electric power developed in Canada. All the hydraulic energy developed is not converted to electric power: there are a number of water wheels and water turbines used for direct drive that are not geared to electric generators. On the other hand, certain central electric stations in the Atlantic Provinces, Ontario and the Prairie Provinces generate electricity from steam or internal combustion engines. It is the purpose of this Section to show the total electric power generated from all available sources. Most of the power comes, of course, from central electric stations, the figures having been given in Table 4 of Section 2, p. 554. The total kilowatt hours of electric power generated by central electric stations is divided into that generated from water power and that generated from thermal engines of all kinds.

As shown in Table **25**, total electric power generated by central electric stations in 1952 was 59,409,198,000 kwh. For a complete presentation, the power generated by manufacturing industries for their own use and the power generated by the primary mining industry for use in its own operations must be added. There are a few other sources of electric energy included, such as electric railways which produced 9,175,000 kwh. in 1952. This production has been taken into the annual total shown in Table **25**. There are numerous small lighting and power plants on farms, rural homes, summer resorts, stores, etc., where electricity from central electric stations is not available and for these no data are available.

25.—Total Power Generated by Central Electric Stations, Manufacturing and Mining Industries, 1943-52

Note.—Figures for the years 1927-42 will be found in the 1948-49 Year Book, p. 516.

Year	Central Electric Stations		Manufacturing Industries		Mining Industries		Total[1]
	'000 kwh.	p.c.	'000 kwh.	p.c.	'000 kwh.	p.c.	'000 kwh.

[1] Includes power generated by electric railways for their own use.

CHAPTER XIII.—THE FISHERIES

CONSPECTUS

	Page
Special Article: **Canada's Commercial Fisheries Resources**	578
Section 1. Governments and the Fisheries	590
Subsection 1. The Federal Government	590
Subsection 2. The Provincial Governments	594
Section 2. Fishery Statistics	602
Subsection 1. Primary Production	602
Subsection 2. The Fish-Processing Industry	606

Note.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

The immense fishery resources of Canada are derived from the waters of the North Pacific and North Atlantic, and from numerous lakes and rivers of the inland provinces. Canada ranks high in fishery production and leads the world in monetary returns from the export of fishery products. (*See* Chapter XXII for fisheries exports.)

CANADA'S COMMERCIAL FISHERIES RESOURCES*

Canada has a coastline of nearly 18,000 miles. Counting the larger islands, some of which are centres for important fishing operations, the sea front totals something like 50,000 miles. The surface of Canada is drained by vast river systems which contain one-half the fresh water of the globe. The Great Lakes, Great Slave Lake and Great Bear Lake, virtually fresh-water oceans, are among the largest lakes in the world.

These Canadian coastal waters and the sprawling network of inland lakes and rivers teem with fish of many kinds. Best known perhaps are the cod and lobster of the Atlantic Coast, the whitefish and lake trout of the inland lakes and rivers, and the Pacific Coast salmon runs. However, there are also many other kinds.

On the Atlantic Coast fishermen take other groundfish such as haddock, pollock, hake, cusk, redfish,† halibut, plaice, yellowtail, witch, flounder and skate. Types of shellfish, in addition to lobster, are clams and quahaugs, oysters and scallops, mussels, winkles and crabs. Of the fish species of the Atlantic occurring in schools (pelagic fish) and those entering the river estuaries, herring is the most important. Immature herring are landed in southern New Brunswick from the Bay of Fundy and are marketed under the name of "sardines". Other pelagic fish are the roving mackerel, the smelt, Atlantic salmon, alewives, swordfish and tuna. In fact more than 30 different kinds of fish, shellfish and marine mammals such as seals and whales are commercially taken by Canada's Atlantic fishermen. In addition, marine products such as Irish moss and other sea-grasses are harvested.

In the fresh-water areas, the whitefish and lake trout commercial fisheries are supplemented by catches of pickerel, lake herring, pike, perch, sturgeon, tullibee and goldeye.

---

* Prepared by the Director, Information and Educational Service, Department of Fisheries, Ottawa.

† Also known as rosefish and ocean perch.

Off the Pacific Coast, in addition to the valuable salmon catch, fishermen take great quantities of herring and halibut as well as soles, grey cod, lingcod, crabs and oysters.

During the past decade Canadians have developed a new appreciation of these vast fisheries resources available in the waters in and around Canada. More people are writing and reading and talking about fish and asking questions about how to buy and cook it. New interest is being shown in conservation measures designed to maintain a continuing yield of salmon, halibut, lobster and other heavily fished species, and the consumption of fish products has been going up, slowly but surely.

This increased attention being focussed on Canada's fisheries resources has developed mainly as a result of post-war changes in the world food-supply picture. The production of animal fats and proteins from sources other than the sea has not kept pace with increasing world populations. Nations that see no hope of increasing the production of protein food from their limited land areas have turned to the sea—the world's greatest storehouse of raw materials. Special agencies have been set up under the United Nations to help other countries develop the sea fisheries off their own shores. Canada, through the Colombo Plan, has contributed substantially towards the establishment of a fishing industry in Southeast Asia.

Other countries having limited sea fronts are sending their vessels thousands of miles across the ocean to share in the fishing grounds of the high seas. And Canadians have watched with concern as increasing numbers of these vessels fill their holds on the rich fishing grounds a few miles off Canadian shores. Their concern has been heightened by the belief expressed that the same pressure for food supplies from the sea may exist in Canada one hundred years from now. Alert to this possibility, both the commercial fishing industry and government agencies have initiated steps to develop the resources to the fullest extent. The industry has invested new capital in modern boats and gear. More fish are being caught and new products are being devised so that greater utilization of all species can be effected.

As a result of government activity there is now more fisheries legislation on the statute books than at any time in Canadian history. Of major importance in this respect are the bilateral and multilateral treaties worked out with other countries for the conservation and development of high seas fisheries off Canada's Atlantic and Pacific Coasts as well as those of the inland Great Lakes.

These are some of the factors that have given impetus to the ascendancy of fisheries in the national scene. Of course there are others—geographical and historical—which have long influenced the growth of Canada's fisheries.

It is climate that largely determines the life picture in water as in air. Fish are very much like land animals. They have their own preference in food and surroundings. They tend to congregate in the regions where their particular food is most plentiful and the climate is agreeable. Food is undoubtedly the most important factor and food is dependent on sunlight, dissolved chemicals and temperature for its growth and on the ocean currents for its location.

The sardines, herring and many other similar forms of fish feed entirely on plankton. Some salmon find sustenance on the shrimp forms, others are fish-eating and the cod are almost entirely flesh eaters. All of these are completely dependent on the first link in the chain of "sea-food"—the plankton—plenitude of which determines the number of fish that any part of the sea will support. The great fisheries are close to land, or in the shallow seas less than 600 feet deep, where the nutrient elements and the plankton are most plentiful. The areas of these shallow seas where marine life abounds are greatest on the continental shelves which rim the world's land masses. Characteristically, the countries north of the equator have wide sloping shelves and, therefore, 98 p.c. of all commercial fishing is in the northern hemisphere.

Sixty per cent of the world's annual production of fish, which is estimated at about 26,000,000 tons, is taken by six countries—China, Japan, Norway, the United Kingdom, the United States and Russia. Canada ranks next to these and contributes a million tons to the total each year. The wide sloping continental shelf on the Atlantic Coast with its submerged hills or "banks" is considered one of the most extensive and richest fishing grounds in the world. The United Kingdom, the United States and Norway as well as several other countries exploit these fishing grounds. Canada's historic rights in them, however, date back to her earliest colonial days.

The Atlantic Fisheries.—Approximately two-thirds of Canada's total catch comes from Atlantic waters. One-half of this catch is cod which still dominates the deepsea fisheries despite more than four centuries of exploitation. Although the old method of fishing with dories and long lines of baited hooks has largely given way to the modern otter trawler, a large part of the catch is still salted down in the holds of the vessels, to be processed for markets in the West Indies, South America and Europe. Of course many of the Canadian and United States vessels, being closer to home ports, now supply the filleting plants on the Atlantic shore with fresh fish. Haddock, hake, halibut, redfish and flatfish were at one time caught only incidentally by the codfishing fleets and the smaller species, such as redfish and flatfish, were thrown "over the side". Filleting operations resulted in the creation of markets for them and vessels now go to the Grand Banks especially for redfish, haddock or halibut, depending on the season.

Only in recent years has knowledge been gained of the extent of the exploitation of the fishing grounds of the Northwest Atlantic. After World War II, Canada, the United States and several other countries became concerned about the possibility of over-fishing the "banks". Subsequent international discussion led to the signing in 1949 of the International Northwest Atlantic Fisheries Treaty by Canada, the United States, the United Kingdom, France, Italy, Portugal, Norway, Denmark, Iceland and Spain, all of whom pursue the fisheries in the Northwest Atlantic. Under the treaty, the International Commission for the Northwest Atlantic Fisheries was formed to study the fisheries so that any signs of over-fishing or depletion of the stocks would be recognized should they occur. This treaty marked a milestone in the history of fisheries conservation in that it was the first time a group of nations formally committed themselves to a program of scientific investigation and regulation to the end that fish resources of a vast area of the high seas could be managed and utilized prudently. It was also the first time conservation action had been taken before a crisis had occurred.

Statistics gathered by the Commission have given the world some idea of the enormous yield of fish from Northwest Atlantic waters. The Convention area includes the waters off the west coast of Greenland, off Labrador, Newfoundland, Quebec, the Maritime Provinces and the New England States, to a line east of Flemish Cap. From these waters, in 1952, the ten nations participating in the convention took nearly 3,000,000,000 lb. of groundfish, of which slightly more than 2,000,000,000 lb. were cod. Haddock landings amounted to 313,000,000 lb.; redfish, 225,000,000 lb.; flounders 117,900,000 lb.; and halibut, 7,500,000 lb. Hake, cusk and pollock were also included in the catch.

Even more astonishing, as a result of experimental fishing carried out under the sponsorship of the Canadian Government, is the fact that new stocks of cod and redfish hitherto apparently unexploited are being discovered around the Coast of Newfoundland.

Canada's share in the groundfish catch now amounts to nearly 1,000,000,000 lb., of which Newfoundland takes a little more than half. The Island of Newfoundland lands 500,000,000 lb. of cod, the bulk of it being salted and dried for export. Markets for Canadian salted cod began to deteriorate as a result of competition from other countries in the 1930's. Trade restrictions and currency difficulties caused a further decline in exports to the West Indies and other countries following World War II. It is an important question now whether Newfoundlanders can make a proper living by producing dried fish from the wealth of fish near their shores. In recent years they have been trying to escape from dependence upon the dried fish trade by developing other and more lucrative markets for their fish, particularly those markets on the North American continent that demand fresh fish. Newfoundland has had substantial fisheries for herring, salmon, lobsters and clams and is trying to develop them in a diversification program. Being most advantageously situated for very great fisheries, Newfoundland may achieve new prominence with the evolution of more effective techniques for capturing the fish and for preparing them most suitably for whatever markets may be available.

Nova Scotia, being farthest out in the ocean, accounts for most of the remainder of the groundfish catch of cod, haddock, hake, halibut and redfish. However the lobster fishery in the inshore waters of the Maritime Provinces exceeds the value of the cod catch. All the Atlantic Provinces have good lobster fisheries but the largest production is in Nova Scotia. There are extensive grounds in the Northumberland Strait area, around the southwestern coast of Nova Scotia and in the Bay of Fundy. The lobster fishery is heavily pursued because of the high returns to the fishermen. Restrictions on gear and seasons and other protective measures have to be enforced to ensure that breeding stocks are maintained. Lobsters are caught with baited traps which are so efficient that there is evidence that almost the entire legal-sized population is removed each year by the fishermen. Illegal fishing and poaching have created an acute problem for authorities since there is danger that if the regulations are not observed economic depletion could result. The attractiveness of lobster fishing compared with cod fishing is illustrated by the fact that in 1953, the lobster fishermen of Quebec, New Brunswick, Nova Scotia and Prince Edward Island earned $14,500,000 for a catch of 42,000,000 lb. while the cod fishermen earned only $5,000,000 for a catch of 183,000,000 lb.

New Brunswick and Nova Scotia produce considerable quantities of clams and quahaugs. Prince Edward Island and New Brunswick are the chief producers of oysters and the scallop beds off the coast at Digby, N.S., are famous. Exploratory fishing and other measures taken to expand these fisheries have not been encouraging, although some new beds of scallops have been found.

Herring, one of the most important food fishes of the world, are plentiful. More than 240,000,000 lb. are caught annually in Atlantic waters. One-third of the catch forms the basis of the important sardine canning industry in southern New Brunswick. Exploratory fishing has led to the discovery of new and valuable stocks of herring in the Gulf of St. Lawrence and great possibilities are entertained for the future of the herring fishery as a food product when and if markets can be developed for them. The Fisheries Research Board of Canada, which conducts the biological research so essential to the full development of Canada's fisheries, has conducted an extensive program of exploratory fishing over several years, using various European-type fishing nets and trawls. In the southwestern portion of the Gulf of St. Lawrence in 1953 the Board used drift-nets and brought in catches of herring more than double the yield that a similar effort would produce in the North Sea.

Salmon, smelts and alewives are trapped as they enter the river mouths on their way to spawning beds, while mackerel and tuna are netted in open water. Swordfish, and sometimes tuna, are pursued with harpoons. Smelts are caught mainly in New Brunswick, a large share of the catch coming from the Miramichi River. The commercial Atlantic salmon fishery is limited only by the availability of supply. For some years the catch has shown a steady decline and a federal-provincial committee is now directing a research program designed to determine the causes of the decline and to rehabilitate the fishery.

Like the Atlantic salmon, the Maritime oyster fishery is limited only by the supply. Famed among epicures and always in great demand, the oyster is a slow-growing bivalve and the fishermen with their tongs can remove them from the beds much faster than they can be replaced by natural reproduction. The fisheries scientists have experimented with methods of oyster cultivation and considerable success has been achieved. The areas of sea bottoms suitable for oyster growth are limited, however, and progress in the expansion of this industry through oyster farming is slow and uncertain.

One of the most interesting developments resulting from experimental fishing techniques demonstrated by the Fisheries Research Board was the introduction of dragging operations for flatfish in the coastal waters of Nova Scotia. The flounders, witch and plaice had never been exploited by the fishermen until the Board showed how it could be done with small drag-nets. The fishery has flourished into an important industry in the larger Nova Scotia bays, creating a new source of income for the fishermen.

Whales and seals are numerous in Atlantic waters around Newfoundland and have been the basis of important industries in that Province. But markets for the oil have been declining since 1952, resulting in a decrease in activities. In 1951, 585 whales were taken by six whaling ships operating out of Hawkes Harbour, Labrador, and Williamsport in White Bay. In addition, 55 minke whales and 3,102 potheads (blackfish) were caught at Dildo in Trinity Bay. In the following year markets were so unattractive that the larger whaling factories did not operate and most of the catch consisted of potheads.

The Newfoundland seal fishery, which is steeped in tradition, centres around two species of seals, the harp or "saddleback" and the hood or "bladdernose". In the winter they migrate from their homes within the Arctic Circle south to the Grand Banks of Newfoundland. The size of the herd has been estimated at about 3,000,000 seals. In the spring when they start moving north again the sealing fleets from Norway, Denmark and Newfoundland make the kill. At one time, about 400 Newfoundland vessels carrying 13,000 sealers took part in the hunt. In 1953, only three Newfoundland vessels and two other vessels operated by Nova Scotia interests cleared from St. John's for the sealing grounds. The adult seals are taken for the oil, which is extracted from the blubber, and the pups are taken for their fur.

In 1951 when an exceedingly large catch of seals—about 440,000—was recorded by all vessels from both sides of the Atlantic, some concern was expressed for the maintenance of the herds. Informal discussions took place between Canada, Norway, Denmark and France on the need for information as to the size of the herds and their productivity. Since then, a standard opening date for sealing has been agreed upon each year and a research program has been conducted. Tagging operations and aerial surveys carried out by the Fisheries Research Board have produced a great deal of new information which should prove useful if any joint conservation measures are found necessary in the future.

The Pacific Fisheries.—The continental shelf off Canada's Pacific Coast is not as extensive as that of the Atlantic, reaching out only from three to 60 miles from land. The valuable salmon constitutes the main prop of the fishing industry and, in terms of dollars and cents, are more valuable than any other fish in Canada. There are five species of salmon, all in abundance, ranging the Pacific coastline and ascending the rivers through most months of the year. The five species belong to a single race, distinct from that of the Atlantic salmon and the true trouts but grouped within the same general family. The popular names for them are sockeye, pink, coho, chum and spring. They differ considerably in size, habits, time of their returns to fresh water and in commercial quality. The sockeye is the most famous because its flesh is very red, very rich in oil and holds both colour and flavour well under all conditions of storage. It is the fish on which the salmon-canning industry of the Pacific Coast was built and it is especially the fish of British Columbia and the great Fraser River. All Pacific salmon spawn in fresh water. The young migrate to sea and when they reach maturity they return to fresh water to spawn and, after spawning, die. The biggest catches are taken when they begin their spawning run and come into estuary waters on the flood tides. About 150,000,000 lb. are taken annually by British Columbia fishermen using purse-seines, gill-nets and trolls. A large portion of the catch is canned, production being as high as 2,000,000 cases (case = 48 1-lb. tins) in some years.

Obviously the salt-water life of the salmon is largely beyond human control and, therefore, present conservation efforts are directed mainly towards three objects—ensuring a sufficient escapement of salmon to produce the eggs necessary for future runs, improving spawning areas that have been adversely affected by industrial developments and natural disturbances, and protecting the young salmon between their emergence from the gravel and their arrival in salt water.

The salmon's predictable habits make them highly vulnerable and rigid controls are put on the fishing operation. There are regulations governing the sizes of nets and methods of using them. There are certain areas, usually near the mouths of rivers, that are closed to fishing at all times. The controls, based on exhaustive biological research, are effective and it may be said that the fishery is being well managed now on a sustained-yield basis. But the productivity of the salmon depends largely on conditions in streams and lakes, primarily water height and water flow. Fluctuations in stream level and in stream flow can be extensive with devastating losses likely to occur under extreme conditions. Stream improvement measures, particularly to control stream flow, hold great promise for increasing salmon productivity and are being continually investigated. Hydro-electric power dams and water-storage impoundments for irrigation and flood control present obstructions to the ascent of salmon to the spawning grounds of major river systems. But power dams are not the only impediments to access by up-stream migrating salmon to their spawning grounds. Natural falls, stretches of highly-turbulent and fast-running water also form obstacles, as do log jams in streams, produced by careless or thoughtless logging, or by natural windfalls. Remedies can be found for most of these and they are attended to by fisheries officials. The responsibility for maintaining the salmon and other anadromous fisheries of British Columbia lies with the Federal Government through its Department of Fisheries. (The term "anadromous" is used to describe fish, which, like salmon, ascend rivers from the sea, at certain seasons, for breeding.) Where power developments and other industrial enterprises have jeopardized the runs of salmon the problems have been co-operatively worked out to the satisfaction of all concerned and devices installed to protect the fish.

Scientific studies conducted by the Fisheries Research Board have revealed that with proper improvement and control of salmon streams, production can be increased. The prospects for successful development to increase production in certain streams are good and are being given careful attention. To what extent logging operations and general deforestation have contributed and are still contributing to the deterioration of salmon waters and to what degree present reforestation practices are improving the conditions has yet to be determined.

The migrations of the salmon lead them across international boundaries within territorial waters, with the result that Canadian fishermen compete with United States fleets for a share of the catch, particularly for the sockeye runs of the Fraser River. These runs, because of their international nature, are supervised by the International Pacific Salmon Fisheries Commission, a two-nation body responsible for regulating the fishery to assure the perpetuation of the species. Early work on the Fraser River sockeye by the Commission led to the removal of a major obstacle to free migrations at Hell's Gate, thus eliminating a serious complication in rehabilitating upper river runs.

The important halibut fisheries of British Columbia are also in international waters and bring Canadian fishermen in competition with the fishing fleets of the United States. This fishery also is regulated by an international body called the International Pacific Halibut Commission. It was established a quarter of a century ago when the stocks of halibut had declined as a result of intensive fishing.

The work of the Commission has been so accompanied by success that a new set of problems has been raised. The fishery has become so popular as a result of increased stocks of fish that quotas are taken up rapidly, leaving halibut longliners idle for several months of the year. Canada's share of the halibut catch annually amounts to between 20,000,000 lb. and 27,000,000 lb., taken within a few weeks and marketed throughout the year from cold storages.

The British Columbia herring fishery ranks next to salmon in monetary importance. These small fish appear in vast schools near the coast at certain times of the year and are caught in prodigious quantities. The year's landings run anywhere from 350,000,000 lb. to 400,000,000 lb., the bulk being processed at reduction plants as herring meal and oil. At one time, herring were dry-salted and marketed in the Orient but World War II eliminated this form of processing and unsettled conditions in China after the War prevented rapid rehabilitation of the dry-salt herring trade. However, because the price for herring oil has been uncertain, at times, the dry-salt herring production has recently been renewed on a limited scale.

In addition to these "big three" of the Pacific Coast fisheries, there are other operations of importance. Landings of sole and flounders, mostly taken by trawl-net in northern Hecate Strait, have been on the increase and total annually about 18,000,000 lb., destined for fresh fillet trade. Ling and black cod are worth mentioning, and clams, crabs and oysters also provide a small source of income to fishermen. A whaling fleet operating off the West Coast takes as many as 400 whales each season.

The oyster industry in British Columbia involves two species, the native variety called the Olympia oyster and the Japanese or Pacific oyster, a fast-growing variety which has been avidly cultivated and, commercially, has largely supplanted the native species. Expansion of the Pacific oyster industry is encouraged by research workers who devise and demonstrate efficient "farming" techniques, investigate new areas of production and new methods of planting the seed. The native Olympia oyster has not been developed to any extent largely because it occupies relatively high beach territory more subject to frost and drought.

Along British Columbia's irregular coastline, abundantly supplied with fjords and inlets, there are undoubtedly many valuable untapped fishery resources. The salmon, halibut and herring fisheries, which are highly efficient, and to a lesser extent certain of the minor fisheries such as crab, shrimp and smelt have had prior interest and attention because of their availability and abundance close to large centres of population. It seems hardly likely that much more can be done in adding new salmon or herring fishing grounds to those already known unless it be in an off-shore and deep-sea direction.

For other fisheries, however, further expansion is thought possible. For groundfish supplies, there are many areas of the inshore sea bottom yet unexplored where rich harvests may be made. For crabs, shrimps, oysters, clams, mussels and abalone and seaweed, only a small portion of the coastline has been assessed regarding the supplies available.

The off-shore areas present opportunities for an increase in British Columbia's marine fisheries. But such developments require utilization of larger and more stalwart vessels, installation of modern aids of navigation and a certain degree of exploratory prospecting either by government or industry to determine the potentialities of the areas in relation to existing market demands.

The need for development of the high seas fisheries of the Pacific Ocean and a method of unified control for the purposes of wise management has been recognized by Canada, the United States and Japan—the three countries mainly concerned—in the North Pacific Fisheries Convention signed at Tokyo in 1952. It brings Japan into association with Canada and the United States in co-operative measures to preserve and perpetuate the fish stocks of the North Pacific. The treaty recognizes the concept of the freedom of the high seas but it attempts to get recognition of the fact that where a fishery has been developed and is under conservation by one or more parties jointly, other nations which have not contributed to its development might be asked to abstain from fishing these resources as long as they continue to be fully utilized and under scientific study and regulations. It will be one of the responsibilities of the International North Pacific Fisheries Commission, set up under the treaty, to make scientific studies of the resources of the North Pacific and to see whether species, which one or more of the countries abstain from fishing, continue to meet the conditions of abstention. The Commission, like that of its counterpart on the Atlantic, has no regulatory powers but can make recommendations to the governments of the three member countries. It is unique in scope and objectives in that under the terms of the treaty it must undertake work involving new procedures and principles for which it has no precedents: for instance, the principle of abstention from fishing for certain species now fully utilized by one or more of the three countries, provided that conservation is practised and governmental regulations are enforced. Under this principle Canada and Japan will not fish for salmon in the eastern Bering Sea and Japan will not fish for salmon, halibut and herring which originate on the Canadian-United States side of the North Pacific.

Some international fisheries have not been referred to international commissions because the problems are less acute and the values of the fisheries smaller. Effective informal arrangements for investigation have, however, been made such as for the elusive pilchard which at one time appeared in great numbers off the British Columbia coast.

The Fresh-Water Fisheries.—The fresh-water fisheries of Canada in terms of volume are small compared with the operations on the coasts. They are little known to the public and the world at large, except perhaps in the sport-fishing sense. It is a fact, nevertheless, that Canada has the greatest fresh-water commercial fisheries in the world. The St. Lawrence waterway system with its chain-like series of inland seas and the Prairie Provinces' network of lakes and streams form a great cornucopia, overflowing with whitefish, yellow pickerel, blue pickerel, tullibee, trout, pike, saugers, eels and other varieties. Though there are fluctuations in the catch from year to year, the total yield has risen steadily in volume and now averages around 100,000,000 lb.—about one-sixth the size of the British Columbia catch. Two-thirds of the total comes from Ontario and Manitoba, each province producing annually between 30,000,000 lb. and 35,000,000 lb. of fish. Saskatchewan and Alberta rank next in production, followed by Great Slave Lake in the Northwest Territories, Quebec and New Brunswick.

In Ontario the fisheries are centred in two regions—the Great Lakes which are fished almost exclusively in the summer, and northwestern Ontario which is mainly a winter fishing operation and resembles those of the Prairie Provinces. On the Great Lakes, fish are taken inshore and on off-shore banks similar in nature to those of the Atlantic "banks". In a shallow lake like Erie the commercial varieties may be caught out in the middle of the lake. But in the deeper lakes the fish are mainly in the inshore areas. The inshore fishery is done largely with pound nets, hoop nets, seines and hooks and the fishermen use gasoline launches, skiffs and rowboats. The off-shore fishery is largely a gill-netting operation performed by a fleet of unique vessels called tugs which are designed to set and haul gill nets by mechanical means.

The Great Lakes fish populations, particularly the lake trout, have declined in recent years. Fishermen blame the parasitic sea lamprey, an eel-like creature which feeds on the blood and body juices of fish. The lamprey attaches itself to its victim by means of its sucker-like mouth and rasps a hole in the body with its sharp teeth. Because the fishermen of both Canada and the United States share in the Great Lakes fishery, an international agreement, providing for joint action in these waters in fishery research and in the elimination of the predator sea lamprey was signed at Washington in September 1954. In Canada, a Great Lakes Fisheries Research Committee was formed in 1953 by the Federal Government and the Ontario Provincial Government to co-ordinate and expand fishery research in Canadian waters and it is this agency which will provide the working nucleus of

Canada's share in this new program. The Committee is giving equal emphasis to general fisheries research and lamprey control. In the general program, research is being conducted into stocks of whitefish and lake trout and the possible utilization of the less popular species that enter the nets of the commercial fishermen. Hydrographic surveys are an important aspect of this work. In the lamprey control program, devices are being installed at the mouths of rivers frequented by lampreys at spawning time. The installations are electrified weirs which paralyse the lamprey and prevent it from reaching suitable spawning areas.

Manitoba's commercial fishing industry is based on a rich heritage of lakes and streams. Lake Winnipeg, the seventh largest fresh-water lake in North America, provides almost one-half of the Province's total catch. From this lake comes the Selkirk whitefish which is in great demand in the United States. The famous Winnipeg goldeye also first made its appearance from Lake Winnipeg catches. Of the three-score fish-producing lakes, most important are Lake Manitoba, Lake Winnipegosis, Lake St. Martin, Lake Dauphin, South Indian Lake, Gods Lake, Island Lake and the Manitoba portion of Reindeer Lake. In Alberta and Saskatchewan where the number of full-time fishermen in past years has been few, the commercial fishing industry is growing steadily. The total catch in Saskatchewan is now around 10,500,000 lb. and in Alberta about 10,000,000 lb.

Lake Athabasca, straddling the Alberta-Saskatchewan border, yields about 500,000 lb. of whitefish, lake trout and other fish each year to the Chipewyan and Cree Indians. Since 1926 its commercial output has totalled 20,000,000 lb. of fish. Lac La Ronge in Saskatchewan has been fished since 1922 and its current commercial production is nearly 1,000,000 lb. a year. Reindeer Lake, located across the Saskatchewan-Manitoba border, is another rich provider and in one year when fishing was intense, fishermen hauled out 2,500,000 lb. It is not known what the lake could stand on a sustained basis but its record over the past 14 years shows that its catch of whitefish and lake trout represents 10 p.c. of the entire production of the Province. Lesser Slave Lake in Alberta has yielded up to 5,000,000 lb. of fish a year while other northern lakes such as Wollaston, Big Peter Pond and Ile à la Crosse each produce annually about 500,000 lb.

The gill net is the chief fishing gear used in the Prairie Provinces. In the summer operation, fishermen operate motor-driven boats and skiffs. In the winter the nets are set through holes cut in the ice and the fishermen establish camps on the ice right at the fishing grounds; usually staying out a week at a time under semi-Eskimo conditions. Living accommodation is a caboose which is hauled to the camp-site.

Quebec's fresh-water commercial fisheries are based on the streams and rivers which flow into the St. Lawrence River, although some of the northern waters are also fished. In addition to the fresh-water species found in other provinces, Quebec fishermen catch a number of salt-water fish which frequent the rivers at certain periods. Eels and sturgeon rank as the most valuable of Quebec's inland fisheries. Most of the catch of eels is caught around the Isle of Orleans, near Quebec, and in the Richelieu River at Iberville. About 500,000 lb. are taken annually and shipped frozen in boxes or in trucks equipped with special fresh-water tanks to brisk markets in the United States. Shipments are also made to European countries. In New Brunswick, the fresh-water fishing industry is a small enterprise compared to the tidal fisheries and the total production of alewives, shad, eels, salmon and suckers amounts to 500,000 lb. annually.

The Northern Fisheries.—Perhaps the greatest opportunity for expansion of the fresh-water fisheries lies in Canada's northern areas. The Yukon and Northwest Territories contain two of the earth's largest lakes and two mighty rivers, besides literally thousands of lesser waters, many of which have not been explored. On the northern edge of the Continent is the Arctic Coast which extends roughly 10,000 miles from the Bering Sea to Hudson Strait.

In the northland lakes and rivers, a few species, like the inconnu, the Arctic grayling or "bluefish" and the Arctic char, have not been found anywhere else in Canada. Others like whitefish, trout, salmon, pike and pickerel are familiar to most Canadians. The sports fish have gained fame among the anglers for their huge size and fighting characteristics. The food fish have achieved similar recognition from the commercial operators for their abundance and table qualities. As the line of civilization pushes northward, it is expected that greater use will be made of these resources. The business of exporting fish is now well established in the northern areas of the three Prairie Provinces and at Great Slave Lake. Great Slave is one of the greatest single producers of whitefish and lake trout and has yielded more than 40,000,000 lb. of fish since commercial fishing began in 1945. In view of the importance of the fish of this and other lakes as a food supply to the native Indians, the Federal Government permits commercial fishing in the Northwest Territories only when it is evident that the commercial "take" will not affect the continuity of supply of fish to the natives. Landings of whitefish and lake trout from Great Slave are thus limited to an annual quota of 9,000,000 lb.

The scattered communities of Indians, Eskimos and white residents in the north have long depended on fish for food both for themselves and their sled dogs. Along the Arctic Coast, the Eskimos depend on the beluga, the seal and various kinds of fish for practically all their daily requirements. The beluga, commonly called a "white whale" is actually a mammal of the dolphin or porpoise family. A successful summer whaling season means prosperity for all Eskimos in the community.

Moreover, the migrations of beluga to the mouth of the Churchill River from Hudson Bay give Manitoba the distinction of being an inland province with a whale fishery. Operating under a permit granted by the Minister of Fisheries and with a quota set each season by the federal authorities, an establishment at Churchill renders the animals into oil and meal. Local Indians are employed to hunt the belugas.

The Eskimos make great use of the seals found in the Arctic waters, the oil making good dog food, the meat providing substantial dinner fare and the skin making waterproof boots and parkas. Large amounts of Arctic char, herring, whitefish and inconnu are eaten and an Eskimo who starts the winter with less than eight to ten thousand fish can look to lean days ahead.

The Fisheries Research Board is attempting to find out more about the fisheries resources along the Arctic Coast and around the Islands of the District of Franklin. The Board operates a specially constructed research boat, the *Calanus*, which has been making regular trips to Eastern Arctic waters each summer since 1949. These studies are now being extended to Hudson Bay and the Beaufort Sea. In Ungava Bay, the Board has found that both the Atlantic cod and the Greenland shark provide possibilities of exploitation by the Eskimo populations there and the federal authorities have tried to educate the inhabitants to take greater advantage of the supply.

The Yukon Territory has its share of the better-known food and game fish but, while they are important as a local food supply and as a tourist attraction, they are not significant enough to support a commercial enterprise for export purposes. In the Yukon, king salmon are caught by the white residents who use an ingenious device known as a fish-wheel, unique in Canada's commercial fisheries. The Indians use gill nets set in eddies and the majority of the fish are filleted, smoked and dried for winter use. Both fish-wheels and nets bring in small quantities of other fish such as the whitefish, inconnu and Arctic grayling.

In the southwest Yukon, the Alsek River and its tributaries contain rainbow trout, actually a landlocked steelhead, and a few land-locked sockeye salmon. The larger Yukon lakes produce whitefish, lake trout and "least herring" or cisco. For the sportsmen, there are "bluefish", Dolly Varden trout, rainbow trout and pike.

Great Bear Lake and Great Slave Lake are linked by the mighty Mackenzie River which drains a quarter of Canada and is comparable in size to the St. Lawrence. This river system and the thousands of lakes in the Territories constitute a great food reservoir for the local residents. Fishing is a staple summer industry of the Indians and of all those white residents who have to travel by dog-team during the winter. In the Mackenzie Valley the sled dogs alone consume each year several million pounds of fish—whitefish, herring and inconnu—and most of it comes from the Mackenzie River in the summer and autumn when the Indians gather around the trading posts where fishing is good. Great Bear Lake provides fish for the Indians in sufficient quantity but it holds little prospect for commercial fishing because the fish populations form merely a fringe inhabiting the near-shore zone and could not survive a large-scale operation.

The commercial development of the fisheries for export purposes in the Northwest Territories has special possibilities. The lower Mackenzie River could be commercially fished, particularly from the Sans Sault rapids north to the delta but such a venture is not yet practicable because the catch would have to be shipped a thousand miles by refrigerator barges to Great Slave during a very short navigable season.

The area is a fisherman's paradise, of course, but access is difficult and only Great Slave Lake has been developed to any extent for the accommodation of sports fishermen.

The first half of the twentieth century with its two world wars and great depression brought fluctuations of fortune to the fisheries industry but it has been, on the whole, an era of increasing development and prosperity in this field. The increased use of trawlers, the development of quick-freezing and filleting equipment and cold-storage facilities have all helped to make the industry much more diversified than formerly. Modern methods of packaging and canning have been adapted to fishery products. Certain varieties of fish such as British Columbia salmon, Atlantic lobster, halibut and whitefish command premium prices on the world market so that, although not the greatest fish exporting nation (Norway exports larger quantities), Canada's exports lead the world in terms of dollar value. The marketed value of the nation's fisheries topped the $200,000,000 mark in 1951, three-quarters of the amount being obtained from outside markets. This is not a high figure when compared with the production of some other Canadian industries but for the people of the coastal provinces and the northern territories it is a dominating factor in their economic life.

Canada, by wise management policies and by full utilization of all available resources, is in a position to play an increasingly important part in producing fish to meet the food needs of the world's populations.

Section 1.—Governments and the Fisheries

Subsection 1.—The Federal Government*

The British North America Act gave the Federal Government full legislative responsibility for the regulation of the coastal and the inland fisheries of Canada. Under the Act, laws are made for the protection, conservation and development of the fisheries throughout the country. The provinces, however, have property rights in the non-tidal fisheries and have been delegated certain administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done in some cases by federal officers and in others by provincial officers, according to arrangements made with the different provinces and without duplication of staff.

Specifically, all tidal or sea fisheries, except those of Quebec, are administered by the Federal Department of Fisheries while the fresh-water or non-tidal fisheries, with some exceptions, are administered by the provincial departments. The exceptions are the Yukon and Northwest Territories, Nova Scotia, New Brunswick and Prince Edward Island where the fresh-water fisheries are federally administered.

The work required in the conservation, development and general regulation of the nation's coastal and fresh-water fisheries is performed by three agencies under the Minister of Fisheries:—

(1) The Department of Fisheries proper, with headquarters at Ottawa and area offices under Chief Supervisors at Vancouver, Winnipeg, Halifax and St. John's.
(2) The Fisheries Research Board of Canada, with headquarters at Ottawa and seven stations across Canada.
(3) The Fisheries Prices Support Board, with headquarters at Ottawa.

The Department of Fisheries.—The chief responsibilities of the Department of Fisheries throughout Canada are, in brief, to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the Department's staff is stationed in the field, working in the four above-mentioned spheres, and is comprised mainly of a protection staff and an inspection staff. The protection officers, including those on the Department's 74 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish. The inspection officers are responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant sections of the Meat and Canned Foods Act.

---

* Revised in the Department of Fisheries, Ottawa.

The conservation program of the Department is carried out by the Conservation and Development Service. Protection officers not only enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, but they inspect spawning streams and keep them clear of obstructions. Engineers of this Service construct fishways to enable fish to by-pass dams. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

To ensure a high standard of quality, inspection of fish and fish products is carried out by the Inspection and Consumer Service. Fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts. The Service also has a staff of home economists at Ottawa who operate a test kitchen and carry out demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the mediums of printed material, films, radio and exhibitions, the Information and Educational Service informs the public on the various aspects of the industry and the work of the fisheries service with the object of developing a better understanding of the resource and those engaged in its exploitation. The Service works closely with the Conservation and Development Service in matters concerning conservation of fisheries, and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in both North American and export markets.

The Markets and Economics Service, which has a staff of economists and market analysts, is responsible for bringing together a fund of factual information, through surveys and other means, on the primary fisheries and on the processing, transportation and distribution of fishery products. Such facts and their interpretation form the basis for development and for other programs of the Department. In the marketing field continual study and interpretation is carried out on market trends in the foreign and the domestic fields. In co-operation with the Department of Trade and Commerce and its Trade Commissioner Service, work is being done on the development and extension of export markets for Canadian fish.

In addition to providing these regular services, the Department assists the commercial fishing industry in several special ways. For the purpose of promoting efficient primary fishing operations and improving the marketing of fishery products, assistance is provided for the construction of draggers and long-liners and for bait-freezing and storage facilities on the Atlantic Coast. For each new trawler built in Canada, the owner is eligible for a licence to operate a used trawler imported from either the United Kingdom or the United States and registered in Canada after payment of duty. An applicant wanting only one trawler may import a used one from the United Kingdom without having to lay down a new keel in Canada. This policy applies to ships purchased from any country entitled to most-favoured-nation treatment in accordance with Canada's obligations as a signatory of the General Agreement on Tariffs and Trade.

In 1953 an additional service to fishermen was provided through the establishment by the Government of the Fishermen's Indemnity Fund which affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Fund, which is administered as a regular service within the Department, meets a long-standing need on the part of the small-scale individual fishermen. Vessels valued at from $250 to $7,500 may be insured with payment of a premium of 1 p.c. of the appraised value. By Mar. 31, 1954, a total of 1,515 fishing vessels with an appraised value of $2,109,637 were covered under the Fund.

The lobster trap protection plan provides that, generally speaking, any lobster fisherman having 32 or more traps may obtain protection up to approximately 50 p.c. of the value of his traps for premiums ranging from five cents to 25 cents per trap depending on the length of the season and on the value of the traps. Although the plan did not come into effect in some areas until the spring of 1954, 234 fishermen with 44,927 traps were insured as at Mar. 31, 1954.

A study is being made of the possibility of extending the program to include other types of fishing equipment that are subject to periodic loss or damage and for which no commercial insurance is available.

The Department also provides assistance in the education of fishermen by making payments to educational institutions that have agreed to carry out educational work among them.

The Fisheries Research Board.—The functions of the Fisheries Research Board of Canada, which was established in 1937, cover a wide field in the interests of conservation, development and management of the fishery resources of the country. In 1953 the membership of the Board was increased from 15 to 19 to allow for wider regional representation and a permanent chairman was appointed.

The work of the Board is, generally, biological and technological in character and is carried out at seven stations: the Biological Station at St. Andrews, N.B., with its substation at Ellerslie, P.E.I.; the Pacific Biological Station, Nanaimo, B.C.; the Central Fisheries Research Station, Winnipeg, Man.; the Newfoundland Fisheries Research Station, St. John's, N'f'ld.; the Atlantic Fisheries Experimental Station, Halifax, N.S.; the Pacific Fisheries Experimental Station, Vancouver, B.C.; and the Gaspe Fisheries Experimental Station at Grande Rivière, Que.

Scientific investigations are an important part of the development of the commercial fishing industry and provide the basis for conservation measures put into effect by the Department. Almost all the principal stocks of commercial fish are under observation by the Board's biologists. Many species, such as Pacific salmon, Atlantic salmon, Atlantic groundfish, lobster, herring, albacore, whitefish, whales, oysters and clams, are being studied intensively. The studies provide knowledge of the life history, growth rate, reproduction, distribution, enemies, diseases, etc., of the fishes, shellfish and sea mammals. Special investigations are undertaken as problems arise. The Board has completed a survey of the fisheries resources of the Northwest Territories and is exploring the fisheries resources of Canada's Eastern Arctic.

Fundamentally, the objective of the Board's technological investigations is to eliminate waste through the utilization of all fishery products that come out of the waters and the putting of those products to the best possible use in the light of current knowledge. The Board's knowledge is continually expanding through basic and applied research and this is helping to bring about a wider distribution of fishery products, a higher level of quality in the products marketed, a better understanding of the use of fish in general nutrition and of fish by-products for food, medicinal and industrial purposes.

The Fisheries Prices Support Board.—Under the Fisheries Prices Support Act, passed in 1944, this Board was set up in July 1947 to recommend to the Government price-support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade.

Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum aggregate amount of $25,000,000 but only on recommendation of the Federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative and research activities. The work is closely integrated with that of the Department's Markets and Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities, and on factors affecting the income of fishermen in the various producing areas. It keeps the financial position of fishermen under continuous review and makes recommendations to the Government on the basis of the facts as it finds them. Special investigations are made when serious problems arise in particular areas.

International Fisheries Conservation.—Fisheries regulation is sometimes needed on the high seas in international waters and international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world for years in joint fisheries conservation development. Major examples of this joint effort are the International Fisheries Commission, concerned with the preservation of the halibut stocks of the North Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Commission, concerned with the conservation and development of the sockeye salmon of the Fraser River. Investigations carried out under the Commission's auspices, subsequent regulation and limitation of catches and, in the case of salmon, the construction of fishways appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under the Provisional Fur Seal Agreement, Canada receives 20 p.c. of the fur-seal skins taken annually by the United States Government from the Pribilofs. Only surplus animals are killed.

In 1949, the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The work of the Commission, established under this Convention, concerns the scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories are: Canada, Denmark, Iceland, the United States, the United Kingdom, France, Italy, Norway, Portugal and Spain. Headquarters of the Commission is at Halifax, N.S.

A step towards international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951, when Canada, the United States and Japan conferred at Tokyo and reached an agreement on fisheries problems. The resulting convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention will study the northern Pacific fisheries, determine the application of the treaty principles and will promote and co-ordinate the scientific studies necessary for ascertaining conservation programs. Temporary headquarters of the Commission is at Vancouver, B.C.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted off the Newfoundland and British Columbia coasts.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The union of Newfoundland with Canada on Mar. 31, 1949, brought about a transfer of some responsibilities in fisheries administration. The Newfoundland Fisheries Board remained the agency of government in the supervision of salt-codfish marketing, but fish and plant inspection, operation of bait depots, etc., became the concern of the Federal Department of Fisheries. The Board, formerly responsible to the Government of Newfoundland through the Commissioner for Natural Resources, became responsible to the Minister of Fisheries for Canada.

The Provincial Government is concerned mainly with improvement and development in fishing and production methods and has conducted experiments in long-lining and deep-water trawling, in the construction of multi-purpose fishing craft and in the exploration of potential fishing grounds. Steps are being taken to secure more efficient use of fisheries salt. Loans have been made available to processors for the establishment or development of fishing fleets and processing plants, and to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production.

In 1951, the Governments of Canada and Newfoundland established the Newfoundland Fisheries Development Committee, consisting of representatives of fishermen, processors and exporters, and of both Governments. The objective of this Committee is to establish the role of each sector of the industry and each government, jointly or severally, in the organization and development of the fisheries. Action has been taken by both Governments in certain matters considered as necessary preliminaries to an over-all program, such as an economic and sociological survey of fishing settlements and the encouragement of the use of community rather than individual stages and rooms by shore fishermen.

---

* Prepared by the respective provincial departments responsible for fisheries administration.

The inland waters of Newfoundland, which provide excellent sport fishing, are not commercially exploited to any significant degree. The lakes and ponds remain under the authority of the Natural Resources Branch of the Provincial Department of Mines and Resources, but the rivers and streams—the resort of migratory fish such as salmon and sea trout—passed under federal jurisdiction as a consequence of the union. Matters of conservation and guardianship are, therefore, mainly or wholly the concern of the Federal Department of Fisheries, although to the extent to which they affect the ponds and lakes, they are subject to provincial or joint action.

Prince Edward Island.—The major responsibility for aid to the fisheries of this Province is undertaken by the Federal Government. Prince Edward Island, however, has established a Department of Industry and Natural Resources which administers the commercial and game fisheries.

Consultations were held in 1950 when marine architects and fishing ports were visited along the Atlantic seaboard with a view to obtaining the best information on boats and gear most adaptable to the Province's coastal waters. These studies resulted in the adoption of the 60-ft. Island Dragger. During the search for information on boats, much was learned of the possibility of adapting the drag-net principle to smaller boats and experiments were conducted to ascertain power requirements and general feasibility. The major part of the revenue of the commercial fishermen of the Province is provided by lobster, smelt and oyster catches.

The streams of the Province are mostly spring-fed and fairly constant in flow, thus providing excellent spawning grounds and nurseries for game fish, of which speckled trout are by far the most important. The problem is to increase the production of trout of a size attractive to anglers and comprehensive biological investigations are being carried on by the Fisheries Research Board to attain this objective by determining the most efficient procedure in stocking, managing and cropping. The Province provides the sites for these investigations and the Conservation and Development Branch of the Federal Department of Fisheries builds the necessary dams and supplies the fish required for experimental purposes.

Nova Scotia.—The basic responsibility for the administration of tidal and inland fisheries in Nova Scotia is undertaken by the Federal Government. The Province, however, supplements the activities of this authority through its Department of Trade and Industry. In practice, a system of co-operative effort has been worked out between the two authorities with each free to carry out individual responsibilities and specific programs. Provincial activities fall into three sections—development, administration and research.

Development.—Development activities include engineering services, financial assistance to the fisheries industry generally, and educational services to the fishermen.

Engineering services are related to the design, construction and equipment of boats, vessels and fish-processing plants. A marine engineer is employed for these services and for the extension of consultant services to all persons interested in the industry. Financial assistance is extended, by way of loans, for the construction and modernization of fish-processing plants and to fishermen for the acquisition of boats and engines. Where the requirements of large new plants have exceeded the capacity of local authorities, the Province has provided such utilities as water lines and rail sidings; the Province also operates a bait freezer at Cheticamp.

Educational services extended to fishermen comprise instruction in basic navigation, rules of the road, and care and maintenance of marine engines by means of short courses at selected outports and a permanent school maintained at Lunenburg. This educational program is assisted by grants under the Canadian vocational training program of the Federal Department of Labour.

Administration.—The Nova Scotia Fisheries Act serves to supplement federal jurisdiction and is administered jointly by the Department of Trade and Industry and the Federal Department of Fisheries. The Act requires fish-processing plants and fish buyers to obtain annual licences, which are issued by the Department of Trade and Industry only on the recommendation of inspectors of the Federal Department of Fisheries and the certification of the Department of National Health and Welfare as to compliance with standards of construction, operation and sanitation contained in federal regulations.

Information obtained from the licensing activities and other statistics supplied by the Federal Department of Fisheries enables the Provincial Department of Trade and Industry to handle inquiries in respect of the fisheries industry.

Research.—Provincial fisheries research activities have been confined largely to the inland trout and salmon fisheries. The Department of Trade and Industry has carried out a five-year program of water control on the LaHave River in the interests of salmon preservation and development; has undertaken experiments in fertilization of lakes and in partial poisoning of lakes to reduce the numbers of coarse fish in competition with trout for the available food supply; and has conducted some special studies of trout populations and salmon migrations. Research activities of this nature have been continued under the direction of the Nova Scotia Research Foundation.

New Brunswick.—The commercial fisheries of New Brunswick are under the jurisdiction of the Federal Department of Fisheries. Since 1945, a Fisheries Division has been in operation under the provincial Department of Industry and Development. In 1946, a Fishermen's Loan Board was established to provide financial assistance to bona fide fishermen for the purchase of new boats and engines. Since its formation the Board has lent over $2,016,747 of which $992,108 has been repaid. It has modernized the deep-sea fishing fleet by the introduction of a most effective small dragger, 51 units of which are operating in the area of the Gulf of St. Lawrence and three in the Bay of Fundy. Seven additional modern units are under construction. The Fisheries Division is promoting experiments on flounder dragging as well as on the seining of herring in the Gulf of St. Lawrence area.

Quebec.—The Minister of Game and Fisheries administers both the sea and the inland fisheries of Quebec. The Department is composed of two divisions—the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.—Quebec is the only province administering its own sea fisheries. For the benefit of producers and fishermen, it provides a system of cold-storage plants for the freezing and preservation of fish. Since the erection of the first plant in 1932, the network has grown to 50 plants with a daily freezing capacity of 250 tons of fish and a storage capacity of 16,000,000 lb. These cold-storage plants also perform a valuable service to fishermen by providing them with frozen bait. In addition, the Department owns and maintains 115 snow houses where fish may be chilled before being sent to storage or filleting plants, 40 culling sheds, and three artificial drying plants where 6,000,000 lb. of fish may be processed annually.

The Department maintains a staff of inspectors, fish wardens, technicians and technologists to administer fishery legislation and to assist in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City, with an office at Gaspe for the administration of cold-storage plants. Statistics are compiled by the Department of Trade and Commerce in co-operation with the inspectors of the Maritime Fisheries Division.

Fish inspection is carried out under federal and provincial legislation by provincial inspectors, who are vested with additional powers for export purposes by the Federal Government.

Educational work among the fishermen and producers is also conducted by the Department in order to teach the latest methods of fish preparation and obtain high-quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior School of Fisheries at Ste. Anne-de-la-Pocatière trains technologists in a four-year course. Encouragement is given to the co-operative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system, fishermen are able to obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of draggers and long-liners and assumes the building costs on a five-year capital refunding plan.

The fish trade is being promoted by advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and free distribution of fish recipes and publicity leaflets, as well as by exhibits at fairs.

Hydrographical research in the Gulf of St. Lawrence, studies on the location of new fishing grounds as well as experiments on sea-fish biology are conducted by a Marine Biological Station at Grande Rivière and two substations on the North Shore and Magdalen Islands. This research has brought into use new types of modern fishing vessels recommended to fishermen. The Department also operates a Limnological Laboratory at Quebec City for studying the biology of the fresh-water fish of the St. Lawrence River and tributaries.

Inland Fisheries.—The Division of Fish and Game exercises jurisdiction over the inland waters. Three hundred full-time wardens are employed and licences are required for sport-fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the Province: St. Faustin, Lachine, Baldwin's Mills, Tadoussac and Gaspe. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, fingerlings and older fish.

The Department administers five parks or reserves in all of which, except for Mount Orford Park, excellent fishing may be found. The Gaspesian and Laurentides Parks are renowned for their trout fishing. The Chibougamau Reserve and the La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Four salmon streams, all under the jurisdiction of the Fish and Game Division, are open to anglers: the Romaine River, the St. Jean River, the Petite Cascapédia River and the Matane River. The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the Province.

The Biological Bureau of the Province, located at the University of Montreal, and the big piscicultural laboratory at Quebec City, with its two stations for practical work located in the Mont Tremblant and Laurentides Parks, study problems connected with marine life.

Ontario.—The fishery resources of Ontario are administered by the Division of Fish and Wildlife, Department of Lands and Forests. The Division operates under the authority of the Fisheries Act (Canada), the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.—The commercial fishing industry in Ontario provides employment for about 4,000 persons directly and for many more indirectly, and produces an annual harvest of from 30,000,000 lb. to 37,000,000 lb. of fish. The industry, although widely scattered throughout the Province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its whitefish, herring and blue pickerel. Lake Superior continues to be the leading producer of lake trout. Other principal species of fish taken commercially are: yellow pickerel, herring or ciscoes, sturgeon, pike, catfish (including bullheads), carp and suckers. Many of the smaller inland lakes are commercially fished, especially those in the northwestern portion of the Province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-ft. tugs, and types of gear also vary from the most common gill net, pound and trap nets, seines and baited hooks to small hand-operated seines and dip nets. Fishing methods and equipment have been rapidly modernized during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs. Such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use, as well as new types of fishing gear. Nylon gill nets are replacing cotton and linen nets and a very efficient and economical trap-net is gradually replacing the pound-net in Lake Erie and other waters.

Excellent co-operation and understanding of the complex problems involved in the administration and management of Ontario's fresh-water fishing industry by the Government and the fishermen, through their local associations and the Ontario Council of Commercial Fisheries, is working to the advantage of the industry as a whole.

Angling.—In Ontario, with its estimated water area of 64,441 sq. miles, angling constitutes one of the most widely distributed recreations. There are 144 different kinds of fish in the Province, including such species as lake and speckled trout, yellow pickerel, black bass, pike and maskinonge. Though it is difficult to measure the value of sport fishing to the Province, the annual revenue from the sale of angling licences (mainly to non-residents as residents require a licence for Provincial Parks only) is in the neighbourhood of $2,000,000.

In order to maintain Ontario's reputation for excellent game-fishing, the wise management of this renewable resource is a prime factor, and a well-trained field staff of conservation officers and biologists is located in the 22 forestry districts of the Province.

Provincial Hatcheries.—Ontario operates 28 hatcheries and rearing stations. Excellent results have been produced in the culture and distribution of the various species of both commercial and game fish. Hundreds of millions of fry and fingerlings, comprising whitefish, herring, pickerel, trout (lake, speckled, brown and Kamloops), maskinonge, bass and ouananiche are distributed annually. Two of the finest trout-rearing stations on this continent are located in Ontario at Dorion near Port Arthur and at Hill Lake near Englehart.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes where commercial fisheries problems are being investigated, and in inland waters where game-fish populations are being studied. The Manitoulin Island station conducts studies relating to the removal and utilization of the less valuable species and the effects of this removal on stocks of the more valuable commercial and game species. In Algonquin Park, a careful record of angling quality is kept in a number of test lakes to allow evaluation of management techniques. Certain of the more barren lakes are being treated with inorganic fertilizer and its effect on the microscopic organisms and fish is recorded.

The habits of lake trout and eastern brook or speckled trout are being studied in order to provide additional information on the proper management of these species. The increase in the sea lamprey and the drastic drop in production of lake trout in recent years in Lake Huron (including Georgian Bay and North Channel) are believed by many authorities to be directly related and have led to considerable joint research by the Ontario Government and by Federal and State Governments in the United States. Co-operation is maintained in the exchange of biological findings and, where practicable and feasible, the results are applied in an attempt to control this menace.

Established fish-management principles are applied by biologists in the various forestry districts. Their program includes such projects as biological surveys and investigations, bass harvesting, coarse fish removal, sea lamprey control, creel census studies, fish tagging and other related subjects.

Manitoba.—The fisheries of Manitoba are administered by the Provincial Department of Mines and Natural Resources. Supervision of the various commercial operations are carried out by officers using patrol boats in summer and bombardier snowmobiles in winter; in addition trucks and cars are used for routine patrols throughout the year. Departmental officers, working in co-operation with federal authorities, give special attention to the quality of the fish, a program that has been found to be beneficial to the industry as a whole.

During 1953, production from commercial fishing amounted to 16,036,300 lb. from summer operations and 15,301,800 lb. from winter operations, a total of 31,338,100 lb. Estimated value as marketed was $5,960,000. Pickerel, whitefish and saugers were the most important species caught.

The filleting trade each year assumes more importance and plants are being expanded and improved. High-quality fillets in attractive packages are becoming "best sellers" in the retail trade. Winnipeg is the principal domestic market but approximately 90 p.c. of the catch is exported to the United States.

The fish cultural program in Manitoba for 1952-53 included the operation of five fish hatcheries, two egg collecting camps, a temporary trout hatchery and a trout rearing station. Four of the five hatcheries are situated on the commercially fished lakes, and one, a sport fish hatchery, in the Whiteshell Forest Reserve.

During the year, 170,010,000 pickerel fry and eyed eggs, 73,450,000 whitefish eggs and fry, 2,091,158 trout fingerlings, and 43,786 adult perch and northern pike were distributed in the fishing waters of the Province.

Biological survey parties conducted investigations regarding speckled trout in northern Manitoba, lake and stream surveys in the Porcupine and Duck Mountains, the fishes of South Indian Lake and the sauger-pickerel relationship in the southern part of Lake Winnipeg. The fish in one small lake were poisoned with derrisroot powder and rainbow trout were introduced.

Saskatchewan.—The administration of fisheries in the Province of Saskatchewan comes under the Fisheries Branch of the Provincial Department of Natural Resources with head office at Prince Albert. Most of the fisheries resources are concentrated in the northern half of the Province, where the lakes have always been a source of food to the fur traders, trappers, prospectors and the Cree and Chipewyan Indians who inhabit the area, and also provide food and supplementary income to the settlers and homesteaders on the agricultural fringe.

There are approximately 129 commercially fished lakes in the Province and the principal species of fish include lake trout, whitefish, pickerel, northern pike, sturgeon, cisco, Arctic grayling, goldeye, mullet, perch and burbot. The growth of the filleting industry has been of particular significance, 15 filleting plants having been established since 1945. That the fishery resources are important to mink ranchers in the Province is shown by the fact that in the year ended Mar. 31, 1953, 68 fur-farm fishing licences were issued and 20,280 mink were fed under these licences; 702 domestic licences and 1,502 free licences to Indians were also issued.

There has been marked development recently in sport fishing. For the fiscal year 1952-53 there were 50,113 resident and 6,615 non-resident angling licences sold, compared with 6,000 resident and 1,500 non-resident licences sold in 1945.

The main endeavour in the fish cultural activities in the Province during the past few years has been to extend the range of the Arctic grayling species from the Far North into the Churchill River area, and to introduce eastern brook trout and certain warm-water species into areas where preliminary study seems to indicate suitable environment. To a large extent the indiscriminate planting of fish has been discontinued. A fish hatchery is operated at Fort Qu'Appelle for the hatching of pickerel, rainbow, brown and lake trout, and two experimental ponds have been built to facilitate the study, under controlled conditions, of the introduction of warm-water species from the United States. An experimental hatchery has been established at Lac la Ronge, where Arctic grayling and lake trout eggs have been hatched. An Arctic grayling spawn camp has also been established in the Fond-du-lac River, near Black Lake and a pickerel spawn camp is located on the Montreal River, near Lac la Ronge.

The management of the provincial water areas is conducted on a scientific basis. In 1947, a large-scale biological program was undertaken and more than 100 water areas have since been studied. The main emphasis has been on the study of productivity of the various water areas as well as the inter-relationship of the species and life histories. In so far as known facts will permit, the management of the various lakes has been placed on a sustained-yield basis. Experiments are in progress on the introduction of non-native species into suitable water areas. Where sport-fishing pressure has increased, such as on Lac la Ronge, Last Mountain Lake and Qu'Appelle Lakes, a creel census has been established and the annual harvest is recorded. The Fisheries Laboratory, established in 1949 at the University of Saskatchewan, has three permanent biologists on its staff; usually about 12 students of the University are employed each summer on biological surveys.

The Fisheries Branch has conducted a program of education designed to acquaint people of the Province with the importance of scientific research and the necessity of certain regulations governing the administration of fisheries. Three colour and sound films have recently been made on sport fishing.

Alberta.—Commercial and game fishing are administered by the Fisheries Branch of the Department of Lands and Forests.

Regulations under the Alberta Fishery Act, designed to improve the packing, handling, processing, storage and quality of commercial fish, have been well received and supported by the Alberta industry. In line with a policy for producing good-quality fish, lakes in which whitefish are infected with pike tapeworm and that do not meet the quality standard have been closed to commercial fishing.

Biological surveys of many lakes and streams taken over the last ten years have provided an opportunity to observe the result of former management policies. It was found that the classical tenets of trout-stream management, including close seasons, legal minimum, feeder stream closure and hatchery plants, were inadequate or incorrect. A new management plan is being conducted featuring the 'fallowing' of smaller tributary streams, abolition of the legal size minimum, except in the case of lake trout, a continuous open season on large streams and rivers and the removal of close seasons for pike, pickerel and perch. Trout-rearing stations and a provincial trout hatchery support trout-stream populations whenever required in cases of natural disaster, severe winter kill, introduction of new species or areas that have no spawning grounds.

British Columbia.—The Provincial Department of Fisheries was organized in 1901-02 and soon became very active in fish-cultural work, building and operating fish hatcheries and instituting scientific research into various fishery problems.

Broadly speaking, the administrative and regulative jurisdiction over the fisheries in British Columbia rests with the federal authority. When British Columbia entered Confederation in 1871, the Government of Canada undertook to protect, conserve and promote the fisheries of the Province, and one of the important functions of the Provincial Department of Fisheries is to observe these aspects and to keep the Provincial Government informed through the appropriate Minister.

The ownership of the fisheries in the non-tidal waters is vested in the Crown, in the right of the Province, as are the shell-fisheries, such as oyster-fishing and clam-fishing in the tidal waters. The authority to administer and regulate these fisheries is vested in the Province, although the regulations covering them are made under federal Order in Council on the advice and recommendation of the Province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish-processing plants under a system of licensing. Provision is also made for the settlement by arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Net-fishing in the non-tidal waters of the Province, including commercial fishing, is regulated and administered by the Provincial Department of Fisheries, while authority for regulation of the game fisheries in the non-tidal waters is vested in the Game Commission, a branch of the Provincial Government administration. The Game Commission operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The harvesting of marine plants of commercial importance in British Columbia, including the kelps, has recently been placed under the Provincial Department of Fisheries for regulation and control. Some research has already been done on a few of the more important species and more will be undertaken as required.

The Provincial Department of Fisheries has established a marine laboratory at Ladysmith on Vancouver Island for the purpose of conducting biological research into those species over which the Province has control, principally oysters, clams and other forms of shell-fish as well as marine plants. This research is conducted with the object of encouraging the industry to produce better products more economically and of enabling the Department to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis. The Department co-operates closely with the research work done by the Fisheries Research Board of Canada, particularly on the Pacific Coast.

Section 2.—Fishery Statistics*

Subsection 1.—Primary Production

The total marketed value of all fishery products in Canada (exclusive of Newfoundland) was $149,821,000 in 1952, representing a decline of almost 15 p.c. from the record peak of $175,718,000 in 1951. The landings of fish also dropped by about 10 p.c., from 1,448,000,000 lb. to 1,315,000,000 lb. The lower production of the West Coast fisheries accounted for these declines.

The data for Newfoundland are not included in the following tables because comparable statistics are not available. In 1952, the landings of fish in Newfoundland were estimated at 575,000,000 lb., with a value to the fishermen of about $13,000,000; the total value of all fishery products was approximately $27,500,000.

---

* Revised in the Fisheries Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

1.—Marketed Values of All Products of the Fisheries, 1870-1952

(Exclusive of Newfoundland)

Year	Value	Year	Value	Year	Value
	$'000		$'000		$'000
1870	6,577	1915	35,861	1944	89,440
1875	10,350	1920	49,241	1945	113,871
1880	14,500	1925	47,942	1946	121,125
1885	17,723	1930	47,804	1947	123,900
1890	17,715	1935	34,428	1948	139,749
1895	20,199	1940	45,119	1949	131,138
1900	21,558	1941	62,259	1950	151,982
1905	29,480	1942	75,117	1951	175,718
1910	29,965	1943	85,595	1952	149,821

Three provinces accounted for 81 p.c. of the total marketed value of fisheries products in 1952; British Columbia's share was 39 p.c., a substantial decrease from the previous year, followed by Nova Scotia with 28 p.c. and New Brunswick with 14 p.c.

2.—Marketed Value of All Products of the Fisheries, by Province, 1948-52

In 1952, salmon was still the most valuable of all the leading species of fish, even though both the quantity landed and the marketed value were lower than in the previous year. Lobsters, cod and herring followed in that order. The most notable decline occurred in the quantity and value of herring.

Table 4 shows the quantities of the main species of the commercial fisheries landed (primary products only) and values marketed (primary and secondary products). Minor items, and secondary products not specifically derived from one particular kind of fish, are grouped in the item "Other".

4.—Quantities Landed and Values of All Marketed Products of the Chief Commercial Fisheries, 1948-52

(Exclusive of Newfoundland)

NOTE.—The quantity landed excludes the weight of livers, but the value of liver products is included in the value for the species concerned.

Subsection 2.—The Fish-Processing Industry

In 1952, a total of 635 firms were engaged in the fish-processing industry in Canada (including Newfoundland). The marketed value of their products was $134,725,000, about 17 p.c. lower than in 1951; this decrease was mainly accounted for by a drop in the value of British Columbia fisheries.

Note.—*The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.*

Section 1.—The Fur Industry

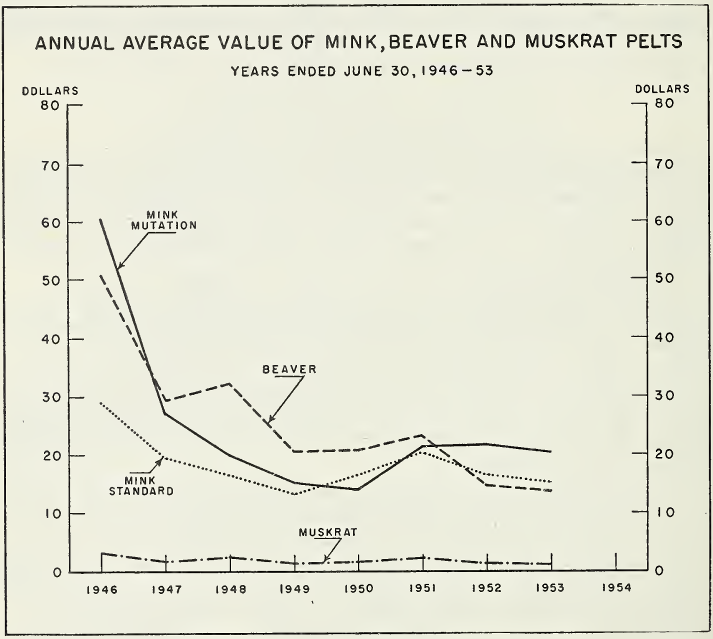
The fur industry was at one time the most vigorous and remunerative industry in Canada and it still contributes many millions of dollars annually to the national income. Until the end of the 19th century practically all Canadian furs were wild-caught and, although fur-farming has developed rapidly during the present century, trapping continues to provide nearly 57 p.c. of the income from raw furs produced in Canada.

Wild fur-bearers are still taken, even in settled areas of this country, but the populations of such animals have, in general, been so reduced by the advance of settlement that the principal trapping areas now lie in the Northwest Territories and the northern parts of the provinces. Many wild animals, including some important fur-bearers, are subject to marked fluctuations in numbers from year to year, and these fluctuations are often greatest and most nearly regular in northern regions. The number of pelts of certain wild species taken annually is notably affected by these fluctuations.

Another and perhaps more important factor governing the 'take' of wild-animal furs is the fluctuation in demand and in price consequent on changes in fashion. Thus, the vogue of recent years for short-haired furs, resulting from the desire of women to present as slender a silhouette as possible while wearing a fur coat, has caused a decrease in demand for fox and other long-haired pelts and a corresponding decrease in the number of such pelts taken by trappers. In areas, such as parts of the Northwest Territories, where these furs were formerly a staple source of income, this style change has resulted in serious hardship. It is obvious that the problems thus created cannot be solved by wildlife-management practices.

The most important aspects of management of the fur-trapping industry are: constant practical scientific research, maintenance of suitable habitat and its improvement where possible, sound and balanced regulation of the harvest of fur-bearers, provision of competent and adequate field staffs, and free education of trappers with respect to the principles of wildlife management. By these means many areas depleted of fur-bearers have once again become productive. Such means will become increasingly important in maintaining Canada's position as a major producer of raw furs.

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, which are the concern of the Federal Government. Also of Federal concern are the fur resources of Yukon Territory and the Northwest Territories. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources (*see* pp. 40-41) is responsible for all Federal Government interests in wildlife resources except for those activities closely related to Indian affairs. The Service co-operates with interested provincial government and other agencies and handles federal interests in relevant national and international problems.



Section 2.—Provincial and Territorial Fur Resources and Management*

Newfoundland.—The Province of Newfoundland, stretching 900 miles northward from a latitude of 47° N. has climatic and habitat conditions suited to the raising of wild fur-bearing animals. The Island supports beaver, muskrat, marten, otter, lynx, fox, ermine and mink; mink were not indigenous to the Island but were introduced since 1935 through animals escaping from mink ranches. The Labrador area, also, is noted for its fine furs, particularly Labrador mink, and muskrat, marten, otter, beaver, fox, lynx, ermine and red squirrel are numerous enough to warrant trapping.

---

* Provincial information received from the respective provincial governments and that for the Yukon Territory and Northwest Territories from the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa.

Wild fur trapping was a basic autumn and winter employment in the Province before World War II but defence construction and maintenance and industrial expansion so changed the economy of the people that trapping is now purely a part-time occupation engaged in only when other employment is not available. In fact the future of the industry may be impaired because few members of the younger generation are receiving the training necessary to the successful trapper.

Throughout the Province, the long-haired fur-bearers were once the basis of the fur industry and the decline in the prices of their fur was mainly responsible for the decline in trapping. As a result, the fox and lynx populations have built up so that they have assumed predator status and are not now protected by regulations.

Beaver management was started in 1935 and the Island of Newfoundland was repopulated by the transfer of live animals. This program proved so successful that during four open seasons in the years 1946-53 the catch numbered 30,000 beaver valued at $550,000. The success of this venture has led to the institution of a similar program in northern Labrador. The Labrador area, north of the Hamilton River drainage, has been without beaver for a hundred years.

Other fur bearers have not been managed except through the usual close seasons provided by regulations; for open seasons, regulations on fur-bearing animals differ according to climatic zone and provide for the taking of animals only during that season when the fur quality of the pelt is at its highest.

Prince Edward Island.—Wild fur-bearing animals are very plentiful on Prince Edward Island. Red fox, skunk and raccoon have become so numerous and their depredations among Island poultry flocks so alarming that all protection has been removed and bounties are paid on all three species. Beaver, too, have increased to the point where they have become a nuisance in this highly agricultural province: they have plugged road and railway culverts and their dams have flooded pulpwood stands and extensive tracts of farmlands. There is now an annual open season on beaver (Nov. 10-Dec. 31) and some trapping permits are issued in the out-of-season period.
